
IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. Information concerning the field tests of the original materials is available from the developer.

After field testing by students, teachers, and professional staffs, the original products were revised and/or rewritten to reflect field test data. This effort included a review of sex and racial biases in the materials. Consequently, the materials appear to display no social bias; they may be adapted to special needs and interests of students; they are transportable; and they are based on both practical and theoretical considerations.

ELEMENTS OF COMPUTER CAREERS

A course teaching high school students how people operate and use computers

Elements of Computer Careers has been designed to provide high school students with a clear picture of how people operate and use computers. It includes separate units, complete with real experiences, on the major job categories in the computer field—data preparation, computer operation, computer programing, systems analysis, systems programing, and computer center management. A seventh unit presents an overview of business, education, and science approaches to computers.

After completing the units, the student will have enough experience to be able to decide whether this is a career direction that would be desirable to follow. For the jobs which do not require advanced training, this program will give the students enough orientation to confidently seek positions directly out of high school—if these positions are ones that don't require advanced training.

The teacher serves more as an adviser than as a teacher. The students actually operate the computer center and provide services to the school. Each student assumes one of the roles described in the units, e.g., one student will be center manager, one will be an operator, some students will be systems analysts, some will be programers, some keypunch operators. During the year, some students will have functioned in several roles.

SUBJECT AREA(S)

The subject area is career education; specifically computer technology.

INTENDED USERS AND BENEFICIARIES

The intended users are students in secondary schools, community colleges, and vocational-technical schools.

GOAL(S) OR PURPOSE(S)

The major goals are to provide students with the necessary experience to determine whether they would like to pursue a career in the computer technology field, and to provide schools with a plan for operating their own computer center, with students doing most of the work while they are learning about computer technology as a career field.

PATTERNS OF USE

The units have been designed for wide flexibility in use so that they may fit into many different class situations. Ideally, they should be studied in the numbered sequence. Specific units, however, may be read either out of order or in isolation—if the students' interest or class structure calls for it. Depending on the circumstances, students may also branch out of sequence at certain points to pursue a particular occupational area in some depth. Lists of supplementary resources for further study are given in each area. In addition to flexibility in the sequence of study, these units have also been designed for maximum flexibility in terms of course structure and computer access. The first mode of use is in a full-year career orientation course, for which the units were originally designed. The second possible structure is in a one-semester career orientation course. The third mode is independent study.

Mode One—Full-Year Career Orientation

The *Elements of Computer Careers* units have been structured for optimal usage in the full-year course. In this mode, the manuals provide basic instruction in the six primary career jobs. As students complete specific units, opportunities for becoming proficient in the specific job should be provided.

The activities for the full-year course should include outside reading, films, field trips, and outside speakers. In this mode, the course may be a full course totally devoted to career orientation, or the materials may be used as the focus of an already existing introduction to computers course. The fullest use of the course in this mode can be gained with hardware consisting of a computer, an input device to read paper tape, punched cards and mark-sense cards, a printer, and a control console. In the case of computer equipment on the site, students and teachers will have to make efficient use of schedules to insure that all students have access to the equipment when they need it.

If only teletypewriter access is available, everything except the assignment of roles in the computer center for "hands-on" experience can still be done. While there will be less flexibility in languages available, access to a teletypewriter still makes a wide range of projects possible.

Mode Two—One Semester Career Orientation

Used as the basis for a one-semester course on computer careers, the units can provide a complete series of instructional materials. This course should provide sufficient practical experience with the elements of each job so that students will know how much interest and aptitude they may have for this field. Where computer equipment is available, the students can still have the experiences of working with it in the various roles. Projects would need to be on a smaller scale, and less time would be available for using outside resources or for students to pursue particular areas of interest.

Mode Three—Independent Study

Depending on the circumstances, one or more of the units may be studied on an independent basis. In this mode, students may follow the entire sequence of units and take advantage of any and all opportunities for laboratory experiences made possible by the equipment available. When this series is used in this mode, students must be sure to schedule use of the equipment with the teacher or computer operator ahead of time.

In the situation where no computer access is available, successful independent use of these units can still occur with the student concentrating on the study questions and the sample laboratory exercises which require only pencil and paper.

ASSESSMENT PROVISIONS

Tests are available at the end of each unit.

TIME REQUIREMENTS

Time required depends on the mode of study chosen. It is either a one- or two-semester course.

IMPLEMENTATION PROCEDURES

It is desirable to have a computer center with a minicomputer, data preparation devices (e.g., keypunch), work space for students, and terminals that can be used in the different classrooms.

A teacher needs to be familiar with the materials. (See "Patterns of Use" for the procedures to use depending upon mode of study.)

ASSURANCES AND CLAIMS

Assurances

No danger or hazard was reported during the testing of this course.

During the preparation of this book, attempts were made to eliminate any bias toward sex, race, religion, age, or socioeconomic stereotypes.

In the minimum mode of instruction, only the book itself is needed for the course. Adaptation of other described modes require computer access and, therefore, might have more limited replicability.

Claims

Elements of Computer Careers was tested in the field at three different sites, and revisions were made based on feedback from the users. Additional revisions were made based upon recommendations of the publisher.

Field testing showed the following results:

1. The unit test results indicate that the full-access mode is the most effective in causing gains and meeting mastery criteria. However, it should be noted that no control group was present, and thus the assertion cannot be made unequivocally.
2. The course is flexible and self-sufficient, providing the teacher is familiar with the user's guide.
3. The teachers generally approved and praised the course and planned to use it in future classes.
4. Students were generally enthusiastic about the course, with the exception of unit 2.
5. The greatest need for improvement lies in the unit tests.
6. The course is less effective in modes in which students have access to only a terminal or have no access at all.

ECONOMIC AND CAREER AWARENESS: A

A guide to provide students in grades 1-4 with an awareness of the family as an economic unit

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

Designed for primary grade students, the learning activities in this guide focus on developing awareness of the family as an economic unit with basic economic needs. Students become aware that needs vary from family to family. They explore the concepts of earning, planning, and saving as they consider satisfaction of economic needs.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are social studies and mathematics.

The topics covered in this guide are: The family as an economic unit, money used to buy things, earning, spending, and saving, planning to buy, and the relationship between ability to buy things and work.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grades 1 - 4.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will: (1) Develop an awareness of the family as an economic unit through understanding the distinction between goods and services, recognizing the difference between needs and wants, identifying family needs and wants that can be satisfied through money, and recognizing the variations of needs and wants that occur from family to family and individual to individual; (2) acquire basic consumer skills through identifying the relative costs of goods and services and the relative value of coins, reading prices and counting coins for small purchases, and recognizing when more money is needed than is available for a purchase; (3) increase economic awareness and develop financial decisionmaking skills through recognizing that people earn money for doing work, realizing that there are reasons for saving money rather than spending it for immediate reward, and learning to choose between alternatives and to follow a savings plan; and (4) become aware of the consumer skills involved in recognizing and making use of basic criteria for planning purchases, knowing how to get the information needed to apply these criteria, and knowing what to do when something goes wrong in the making of a purchase.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. Information concerning the field tests of the original materials is available from the developer.

After field testing by students, teachers, and professional staffs, the original products were revised and/or rewritten to reflect field test data. This effort included a review of sex and racial biases in the materials. Consequently, the materials appear to display no social bias; they may be adapted to special needs and interests of students; they are transportable; and they are based on both practical and theoretical considerations.

ECONOMIC AND CAREER AWARENESS B

A guide with an emphasis on consumer knowledge, for grades 1-4

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

This guide places emphasis on consumer knowledge. Students in primary grades delve into the ideas of using money to facilitate trade; practice skills that help minimize expenses such as reading price tags or counting change; and gain experience in earning, saving, spending, and family budgeting.

The function of a bank and its workers is explored in detail.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are social studies and mathematics.

The topics covered in this guide are: Exchanging things in a store; using coins and counting change; earning, saving, and spending money; banking and bank workers; and planning for family spending.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grades 1 - 4.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will: (1) Identify forms of economic exchange and recognize that trading by barter can sometimes be inconvenient and that money facilitates trade; (2) increase self-sufficiency in making purchases and handling money through counting coins, making change for purchases of a dollar or less, and finding and reading prices; (3) identify a variety of ways students can earn and spend money; relate pay, earning, and spending to performing jobs; choose and perform a job for "pay"; and plan, save for, and make purchases; (4) develop an awareness of banking institutions, the workers banks employ, and the work performed there, and relate worker tasks to skills learned in school; and (5) relate expenses to the family unit or to individuals within the family unit, identify regular and occasional family expenses, recognize that most family income is spent on needs and regular expenses, and identify ways in which families and family members can use their money wisely.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. ECONOMIC AND CAREER AWARENESS: C

A guide to familiarize students in grades 1-4 with basic economic terms and concepts

With the foundation provided by the *Comprehensive Career Education School Based Model,* this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

Students at the primary grade level develop familiarity with basic economic terms and concepts, including those relating to the consumer. They investigate services offered by banks and also study money substitutes.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are social studies and mathematics.

The topics covered in this guide are: Elements of economic planning, long-range economic planning, a definition of "producer" and "consumer," money substitutes and their uses, the functions of a bank in the community, and the ways in which people earn money through careers.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grades 1 - 4.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts. The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will: (1) Identify some basic economic terms—consumer, goods, services, needs, and wants—and understand their relationships to each other; (2) identify some basic elements of economic planning and learn to make decisions based on examination of these criteria; (3) become acquainted with the idea of long-range economic planning and some of its attendant concepts—mixed and variable expenses, seasonal variations in purchases and expenses, budgets, decisionmaking, maintaining goods already owned, and saving money to satisfy long-range goals; (4) distinguish between "consumer" and "producer" and become familiar with the production of both goods and services and the three stages in the production cycle—planning, manufacture, and distribution; (5) become aware of the services offered by banks and understand a variety of banking terms—savings account, checking account, deposit, withdrawal, teller, safe-deposit box, loan, and interest; (6) become aware of the existence of various money substitutes and the occasions in which each of these is most effectively used; and (7) become aware of the existence of a variety of occupations and career fields and understand that many require special aptitudes, training, and equipment.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. COMMUNITY SERVICE WORKERS

Materials to acquaint primary grade students with services performed by various workers in the community

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

Students in the primary grades become acquainted with services performed by various workers in the community. After the identification of community service workers and the tasks they perform, emphasis is placed on the need for cooperation among workers in completing tasks. Students consider the concepts of "responsibility" and "dependability" as related to "getting the job done."

SUBJECT AREA(S)

The subject area for which the materials in this guide have potential is social studies.

The topics covered in this program are services performed by community workers, cooperation among workers, responsibilities of community service workers, effective interviewing techniques, and interviewing community workers.

INTENDED USERS AND BENEFICIARIES

The materials in this program were developed for students in grade 2.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this program will: (1) Develop an awareness of the world of work through understanding of the jobs that many workers perform in providing various services to the community, (2) realize that the successful completion of one job allows another job to be done (cooperation among workers), (3) explore the concept that people in the community depend upon workers to perform certain services (the consequences of responsibilities), and (4) determine what kinds of questions to ask during an interview and actually interview community service workers.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. CAREER EXPLORATION THROUGH MATHEMATICS

A guide for career education teachers helping students in grades 8-10 to develop and reinforce mathematical skills

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

The learning experiences in this teacher's guide help students at the secondary level to develop and reinforce mathematical skills and to become familiar with a wide range of occupations. Each student is encouraged to assess personal attributes, including competencies in mathematics; to establish tentative occupational goals; and to set some guidelines for high school curriculum planning.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are mathematics and guidance.

The topics covered in this guide are: Occupational information; personal attributes affecting occupational choice; understandings and skills with whole numbers, fractions, ratios, and percents, perimeter, area, and volume determination; and planning a tentative course of study.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grades 8 - 10.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the early classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this program will: (1) Examine and discuss various sections of *Dictionary of Occupational Titles* and interpret and incorporate data from this source in several occupational studies as a means of developing career awareness; (2) assess personal attributes and compare them with worker traits for a particular occupation as a means of developing an awareness that personal attributes influence occupational success; (3) perform mathematical operations involving the concepts of whole number addition, subtraction, multiplication, division, ratios, percents; and perimeter, area, and volume as a means of acquiring basic competencies for a variety of occupations; and (4) establish occupational goals on the basis of current interests and perceived personal attributes and plan a tentative course of high school study as a step in attaining these goals.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. Information concerning the field tests of the original materials is available from the developer.

After field testing by students, teachers, and professional staffs, the original products were revised and/or rewritten to reflect field test data. This effort included a review of sex and racial biases in the materials. Consequently, the materials appear to display no social bias; they may be adapted to special needs and interests of students; they are transportable; and they are based on both practical and theoretical considerations.

MATHEMATICS AND RELATED CAREERS: B

A guide to help students in grades 9 and 10 to develop and reinforce mathematical skills

With the foundation provided by the *Comprehensive Career Education School Based Model,* this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

The learning experiences in this teacher's guide help students at the secondary level to develop and reinforce mathematical skills and to become familiar with a wide range of occupations. Each student is encouraged to assess personal attributes, including competencies in mathematics; to establish tentative occupational goals; and to set some guidelines for high school curriculum planning.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are mathematics and social studies.

The topics covered in this guide are property taxation and price indexes.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grades 9 and 10.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will solve numerical problems confronting specific individuals who deal with the relationships between market value, assessed value, tax rate, property tax, and price indexes.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. CREATING GREETING CARDS: A BUSINESS BRINGS PLEASURE

A guide which allows students (grades 2-4) to participate in the creation and production of greeting cards

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

The learning experiences in this teacher's guide provide students at the primary level with the opportunity to participate in the creation and production of greeting cards. Students explore different kinds of cards and simulate the production process of a greeting-card company. Students learn about greeting cards as a form of communication as well as the cooperative effort required for mass production. As students learn by doing, they develop an appreciation for the habits and skills related to completing a task. These habits and skills include adequate preparation, orderly approach, meeting responsibilities and performance standards, safe work habits, physical skills, recurring production needs, and creativity.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are arts, language arts, applied mathematics, and social studies.

The topics covered in this guide vary as follows: A different card for each occasion, the concept of production sequence, the sequence of tasks within production, safety and work skills, and mass-producing greeting cards.

INTENDED USERS AND BENEFICIARIES

The materials in this program were developed for students in grades 2-4.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will: (1) Apply background information in categorizing greeting cards as a means of gaining awareness that adequate preparation contributes to success and confidence in task performance, (2) place pictures of greeting-card production in proper sequence as a means of better understanding the production process, (3) portray a reason for task sequence as a means of demonstrating that success in many tasks depends on meeting performance standards, (4) draw a picture of a task group safety practice as a means of demonstrating awareness of the need for safety on the job, (5) perform production tasks with increasing accuracy or control of psychomotor movements as a means of developing physical skills needed in the work world, and (6) communicate a message creatively and appropriately as a means of developing creativity in work.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. LEARNING ABOUT BUSINESSES

A guide to help primary grade students understand interrelationships among businesses, workers, and families

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

In this teacher's guide, the learning experiences focus on helping students in primary grades develop their understanding of the interrelationships between businesses, workers, and families by means of an analysis of local stores and businesses and an examination of the workers who work in them. Students are given the opportunity to acquire economic awareness and self-sufficiency. They learn to match needed goods and services to the types of stores and businesses that provide them. They identify and explore the basic business principles of income; expenses; and dependence on workers, customers, and other businesses.

SUBJECT AREA(S)

The subject area for which the materials in this guide have potential is social studies.

The topics covered in this guide include: The way in which businesses provide families with goods and services; the functions that customers, workers, and some businesses perform with relation to a particular business; the nature of a business itself; the different types of jobs within a particular business; and the procedures required in operating a small business.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grades 1 - 4.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this program will: (1) Recognize that businesses exist to fill needs or wants for goods and services; (2) recognize that businesses have incomes and expenses; (3) identify the components of a business (activities, objectives, location, facilities, equipment, expenses, customers, suppliers, related businesses, advertising, and benefits to workers); (4) understand that people perform a variety of jobs in businesses and that specific businesses may be described by examining the work performed and the skills used; (5) understand that different jobs require specific aptitudes, interests, and temperaments; and (6) appreciate the relationships between educational experiences and preparation for careers by applying basic computational skills.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

MAKING TOYS THROUGH TEAMWORK

A guide to acquaint students in grades 4-6 with wood construction and mass production

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

In this guide intermediate level students engage in learning experiences intended to acquaint them with wood construction and mass production. In addition to developing carpentry skills, students learn the safe use of tools, equipment, and materials. They simulate a toy company and inductively develop processes for mass production of toy boats and apply marketing principles. In addition, students learn general work-related skills as well as task planning, interpersonal relations, individual and group work methods, applied mathematics, and decisionmaking.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are art, social studies, language arts, and mathematics.

The topics covered in this program are an introduction to wood construction, building an individual project, group design and construction, designing working drawings and making a market survey, introduction to mass production, solving company problems, mass production in practice, and relating wood-construction knowledge to occupations.

INTENDED USERS AND BENEFICIARIES

The materials in this program were developed for students in grades 4-6.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this program will: (1) Draw, describe, practice, and display correct and safe use of tools, equipment, and materials as a means of demonstrating an understanding of basic wood construction; (2) develop and use a work plan for making a wood product in order to become familiar with the requirements of task planning and to develop positive feeling toward work done individually; (3) simulate a toy factory as a means of recognizing and developing social skills and production methods appropriate for group work; (4) make a working drawing of a sample toy boat as a means of developing mathematical skills useful in the work world; (5) show the use of division of labor, tools, and skills as a means of demonstrating an understanding of mass production; (6) use an application form as a means of recognizing that interests and skills influence career decisions; (7) work on an assembly line as a means of recognizing and developing effective health and safety habits for teamwork, and reassess toy designs and assembly-line tasks as a means of incorporating creativity in teamwork; and (8) pretend to seek a position relating to wood-construction knowledge as a means of understanding the cause-and-effect relationship between job experience and future employment.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

THE SUPERMARKET

A guide to acquaint students in grades 2-4 with the food industry

With the foundation provided by the *Comprehensive Career Education School Based Model,* this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of this guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

The learning experiences in this teacher's guide are intended to acquaint primary grade students with the food industry—the goods and services it provides, the workers it employs, and some of the basic skills the consumer needs. The supermarket, which is considered to be the segment of the food industry most familiar to primary students, is the focal point of study. As they observe and interview supermarket workers on the job, students gain some understanding of the job activities and working conditions. Sound consumer habits are developed as students apply arithmetic and reading skills in making shopping decisions and play the roles of customers and supermarket workers in a culminating activity.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are social studies and mathematics.

The topics covered in this program are: An introduction to the supermarket, supermarket departments, supermarket workers, supermarket tools and equipment, supermarket suppliers, and consumer skills in the supermarket.

INTENDED USERS AND BENEFICIARIES

The materials in this program were developed for students in grades 2 and 3.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this program will: (1) Identify the types of goods, services, and jobs the supermarket provides in order to develop an awareness of the importance of the supermarket to the community; (2) classify supermarket products and create a floor plan arrangement as a means of developing an understanding of the departmental organization of the supermarket; (3) identify supermarket workers and the tasks they perform and relate each job to the operations of a particular department with respect to working conditions as a means of developing career awareness; (4) identify supermarket tools, equipment, and materials and explain or demonstrate their use; (5) identify food sources and methods of processing and distribution, and trace the histories of several products from their origin to their arrival at the supermarket; and (6) apply arithmetic and reading skills in making shopping decisions as a means of developing sound consumer habits.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

THE SERVICE STATION

*A guide to acquaint 2d-graders with the service station
as part of the community*

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

In this guide, students at the primary grade level are encouraged to expand awareness of jobs within the community. The role of the service station worker within the community is examined with special emphasis on the goods and services provided.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are social studies, art, and language.

The topics covered in this product are: The service station in the community, goods obtained at the service station, services available at the service station, paying for goods and services at the service station, equipment used at the service station, and the ways in which service station workers help people.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grade 2.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The student completing the learning sets in this program will: (1) Identify items that can be bought at the service station in order to clarify the concept of "goods," (2) be able to identify the work done for people at the service station in order to clarify the concept of "service," (3) become familiar with the different ways goods and services may be paid for at the service station, (4) become familiar with the tools and equipment used by service station workers, and (5) assemble a model service station and participate in role play activity.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. Information concerning the field tests of the original materials is available from the developer.

After field testing by students, teachers, and professional staffs, the original products were revised and/or rewritten to reflect field test data. This effort included a review of sex and racial biases in the materials. Consequently, the materials appear to display no social bias; they may be adapted to special needs and interests of students; they are transportable; and they are based on both practical and theoretical considerations.

PEOPLE WHO WORK WITH ANIMALS

A guide to provide primary grade students with awareness of careers available for people who work with animals

With the foundation provided by the *Comprehensive Career Education School Based Model,* this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

This teacher's guide provides the student in the primary grades with knowledge of animals and stimulates an awareness of the numerous careers available to people who want to work in that field.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are: Social studies, language arts, and arithmetic.

The topics covered in this guide are: Studying animals and their environment, learning about those who work with animals, applying knowledge in the classroom about animals, and examining responsibilities of people who work with animals.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grades 1 - 3.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will: (1) Review knowledge already acquired about animals and people who work with them and learn about other and less familiar animals through exposure to a greater variety of animals; (2) increase knowledge of people who work with animals and the ways in which these people perform their tasks; (3) become familiar with the habits and needs of animal pets and learn how to care for them properly; and (4) gain greater understanding of the responsibilities, aptitudes, and training needed, and the duties involved in working with animals through firsthand observation.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. PHYSICAL EDUCATION FOR TOMORROW

Materials for preschool and primary grade students to realize self-awareness by performing basic motor skills

With the foundation provided by the *Comprehensive Career Education School Based Model,* this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K - 12. The theme of the guidebook is career awareness and exploration.

It consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in a guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary activities.

For preschool and primary students, this guide builds on the concept of movement exploration. Self-awareness is realized as individual students discover potentials for performing basic motor skills and explore creative movement. Involvement in the production of a circus provides practical application of concepts and skills and awareness of career opportunities.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are physical education and art.

The topics covered in *Physical Education for Tomorrow* are: The body, directional movement, axial movement, crawling and rolling, walking and running, sliding and leaping, hopping and jumping, galloping and skipping, balls and beanbags, movement combination, creative movement, balance, rhythm, discovery course, and circus.

INTENDED USERS AND BENEFICIARIES

The materials in *Physical Education for Tomorrow* were developed for students in preschool and grades K-2.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff-development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and open classrooms.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in *Physical Education for Tomorrow* will: (1) Develop greater self-awareness through exploratory experiences in the movement of the body; (2) develop a realistic image of one's body in relation to space through lateral and directional movement; (3) further develop skill in movement in relation to space through axial movement; (4) further develop body control in relation to space through crawling and rolling; (5) explore a variety of locomotor skills, small muscle skills, eye-hand coordination, a sense of balance, and movements in rhythm; (6) further heighten self-awareness by exploring individual possibilities for creative movement; (7) explore play equipment and accessories used in a discovery course as a means of further developing axial and locomotor skills; and (8) apply in a practical way the concepts and skills developed in previous learning experiences to the production of a circus.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others, or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. Where concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In

most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally, the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. WORKING WITH TREES

A guide to acquaint students in grades 3 and 4 with the products and services trees provide

With the foundation provided by the *Comprehensive Career Education School Based Model,* this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

Learning experiences in this teacher's guide are designed to develop the awareness of students in the primary grades about the personal and social value of work and to introduce them to the variety of tree-related occupations. The guide places emphasis on both the affective and cognitive domains. Students are encouraged to relate the "work" of people to the functions of trees as a means of realizing both the values of trees to man and the satisfaction of working with them.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are: Science, art, music, language arts, and social studies.

The topics covered in this guide are: Getting acquainted with trees, products and services trees provide, jobs that tree products provide, jobs that help to care for trees, and the possibilities of the individual student working with trees.

INTENDED USERS AND BENEFICIARIES

The materials in this program were developed for students in grades 3 and 4.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this program will: (1) Identify products and services that trees provide as a means of developing knowledge of the relationship between something previously learned and something newly learned; (2) become familiar with occupations related to the care of trees and tree products as a means of developing an awareness of the occupational world through exposure to work settings, tasks, skills, tools, liabilities, and satisfactions; and (3) complete a job-oriented project dealing with trees or tree products as a means of becoming aware of emerging interests and the relationship of school experiences to future job experiences.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In

most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. INDIVIDUALIZED APPROACH TO INSTRUCTION IN FOUNDATION EDUCATION

Foundation education for students entering occupational training

This is an individualized approach, emphasizing foundation preparation for students who will be entering occupational training, for General Educational Development (GED) preparation, and for support background where elected.

Curriculum area 11, *Mathematics Skills,* and curriculum area 15, *Communication Skills,* comprise the Foundation Education Program. The mathematics program is Individualized Learning Approach (ILA) in its entirety. Mountain Plains personnel have fitted ILA into the Mountain Plains Learning System through the use of certain organizational devices. The communication skills program has been rewritten and adapted from commercial sources by Mountain Plains personnel to suit the needs of Mountain Plains students.

Communication skills consists of three major divisions: Basic, advanced, and GED preparation. The Foundation Education Program is flexibly designed to allow individual prescriptions to be written, depending on the occupational requirements and aspirations of each student.

Criterion-referenced tests provide the basis for diagnosis and for individualized movement throughout learning segments prescribed for each student, who progresses at a rate commensurate with individual needs and capabilities.

SUBJECT AREA(S)

Subject areas are basic communication and mathematics skills.

INTENDED USERS AND BENEFICIARIES

Individualized Learning Approach (Mathematics) is used in commercially prepared form. *Communication Skills* is highly modified from a variety of sources and is designed specifically for Mountain Plains students who commonly have a somewhat lower-than-national norm reading level. In addition, Mountain Plains students have a vested interest in spending the least possible time in ancillary educational studies. They concentrate on preparing for the job of their choice. Consequently, foundation education courses, especially communication skills, are condensed, selected for relevanace to known student needs, and flexibly administered in order to meet individual needs. Because of these features, these Learning Activity Packages (LAP's) can be used with a variety of students having similar traits. Some examples are: Rural secondary schools, urban secondary schools, adult or career education—urban disadvantaged, postsecondary schools, vocational or career education centers, and institutions where inmate rehabilitation is in progress.

GOAL(S) OR PURPOSE(S)

The purpose of foundation education courses is to help overcome background deficiencies which would hinder student job-choice eligibility.

PATTERNS OF USE

Foundation education assignments are made individually and are determined by a number of factors: Job choice, level of current competence, and aspirational level. In addition, adjustments can be made to individual prescriptions on student, instructor, or other staff demand. The ILA system determines the pattern of use in mathematic skills; *Communication Skills* use the Mountain Plains Learning System approach, which is similar. Learning experience guides, levels, courses, units, and LAP's are used.

ASSESSMENT PROVISIONS

Students are initially placed in the program on the basis of Comprehensive Test of Basic Skills (CTBS) test scores. When the student's eventual programmatic changes have been determined, placement is based on program type, ability, and aspiration. Progress and mobility in the program are determined by cognitive criterion-referenced tests.

TIME REQUIREMENTS

Students are scheduled into either or both mathematics skills and communication skills. Student schedules vary up to 8 or 9 months, depending on need and, sometimes, desire.

IMPLEMENTATION PROCEDURES

Teacher orientation to the philosophy of individualized instruction is necessary for success in using this system. A guide to orientation is contained in the document, *Design for Field Testing of Mountain Plains Curriculum.*

MATERIALS AND EQUIPMENT

Materials are currently incomplete and unavailable. Costs have not been established. At present, the following materials are being developed and/or refined:

Learning Activity Packages (LAP's)
Learning Experience Guides (LEG's)
Course job title pretests and posttests
Teacher's manual
Student progress records
Student work plans
Administrator's Guide to Using the Mountain Plains System
Performance Activity List.

ASSURANCES AND CLAIMS

Average student time to complete necessary background learning for occupational preparation instruction is 100 hours. (General Educational Development) preparation students complete this segment in an average of 200 hours and pass GED tests at another institution under conditions controlled by that institution at a 97 percent success rate. Of the former 244 students taking this examination, 238 passed successfully.

DEVELOPER/AUTHOR:

Mountain Plains Education and Economic Development Program, Inc.

Bruce C. Perryman, Project Director

AVAILABILITY

Products are to be completed and are under developmental copyright. At present, they are not available to the general public.

INFORMATION CURRENT AS OF MARCH 1975 ■

THE CAREER DEVELOPMENT SERIES (PRODUCT OF THE HOME/COMMUNITY-BASED CAREER EDUCATION MODEL III)

Information and practical suggestions on several major areas of career development

During the past 2 years, the Career Education Project has produced a series of career-related booklets for use with and by adult clients. Every person scheduled for counseling has been sent the introductory booklet prior to the first counseling session. The other booklets have been used by the counselors during the counseling process and, when appropriate, sent to the clients for additional information or reinforcement. This product, a single-volume adaptation of that series, contains information and practical suggestions on several major areas of career development, with each section also including a short listing of other materials to consult for further information.

The first section of this booklet presents an overview of the career development process and provides suggestions as to how people can locate sources of help for developing their own careers. The next section, on self-assessment, describes the importance of learning about oneself and suggests techniques to use in defining one's interests, abilities, values, and goals. This leads into sections on exploring the world of work and finding the appropriate training. The fifth section is devoted to identifying and dealing with such problems as meeting educational expenses, locating child and adult care, overcoming doubts and pressures, and coping with illegal practices, especially discrimination and educational "rip-offs." The final segment concerns the job search, particularly job-hunting techniques, presenting qualifications in writing, and the interview. It includes sample résumés, cover letters, application forms, and interview questions.

This booklet is being produced with the understanding that career development is a process unique to each individual, with no two people facing the same issues at the same time or in the same way. Therefore, the booklet is designed so that a person can use any part of it that best meets personal needs.

SUBJECT AREA(S)

Career education, continuing education, vocational and educational guidance, and counseling are the subject areas.

INTENDED USERS AND BENEFICIARIES

This product is intended for use by adults interested in their own career development and by those groups, organizations, and individuals involved in helping such career-concerned adults. It may also be used by high school and college students, guidance counselors, and placement officers.

GOAL(S) OR PURPOSE(S)

The goals of this program are: (1) To introduce and explain the basic steps in career development: self-assessment, exploring the world of work, finding appropriate training, dealing with obstacles, and conducting a job search; (2) to provide a career planning guide for use with and by adults; and (3) to serve as a prototype booklet through which the project can gain insight and feedback from other practitioners.

PATTERNS OF USE

The Career Development Series consists of six interrelated yet independent units which, for reasons of economy, are presented in a single package. The units may, however, be used separately in any order to meet individual needs. Further, the product has been written to be used both by counselors to help their clients in career development and by individual adults to meet their own particular career planning needs. The Series may also be used as part of an ongoing course about career development or as a model for the creation of localized materials.

ASSESSMENT PROVISIONS

The materials and information presented in *The Career Development Series* reflect what has been learned from the formative evaluation of 2-1/2 years of providing information, guidance, and referrals to career-concerned adults. Further, the document is a revision and refinement of two previous editions of a series, at least one volume of which has been sent to every project client since December 1973. Both counselors and clients are currently being asked to evaluate the utility of the materials. After copies of this version have been distributed, followup interviews will be conducted by phone, by mail, and in person. Selected reviewers will assess its potential utility.

TIME REQUIREMENTS

Since this product may be used by such a variety of audiences to meet individual needs, the time requirements for implementing the described activities will vary.

IMPLEMENTATION PROCEDURES

Although this product is independent and self-instructional, some readers might find it helpful to have some assistance from career counselors in implementing the described activities. Some might also find it helpful to use *The Career Development Series* in conjunction with other Career Education Project publications, especially *Women and the World of Work, External Degree Study: A New Route to Careers*, and *From Liberal Arts and Sciences to Careers: A Guide*.

ASSURANCES AND CLAIMS

This booklet contains products and descriptions of techniques determined to be effective on the basis of more than 2-1/2 years of formative evaluation. This booklet itself, however, has not yet been distributed, so the developers cannot guarantee its transportability or harmlessness even though every attempt has been made to insure that the booklet will have these characteristics.

The booklet has been carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, and inappropriateness of content.

DEVELOPING CAREER-RELATED MATERIALS FOR USE WITH AND BY ADULTS (PRODUCT OF THE HOME/COMMUNITY-BASED CAREER EDUCATION MODEL III)

A discussion of ways to gather, organize, and present data on occupational projections

In order to obtain feedback and to help others interested in creating a similar program, the Career Education Project is producing experimental editions of a series of five manuals, each describing ways to plan, establish, and operate one of the project's major components. The series as a whole is designed to show how to plan, establish, and operate a comprehensive career counseling service for adults. However, individual manuals may be used independently by a wide variety of audiences.

This manual describes the activities and products of the project's information unit, the component charged with the development and presentation of an information base about local educational, training, and supportive resources as well as career-related materials for use with clients.

After discussing the rationale for the information unit, the manual briefly deals with the processes and guidelines used to create the materials. It then provides an overview of the contents and uses of the unit's three major directories (*Educational and Training Resources*, *Supportive Services*, and *Occupational Projections* in addition to four instructional pieces: *The Career Development Series*, *Women and the World of Work*, *Liberal Arts and Sciences and the World of Work*, and *External Degree Study: A New Route to Careers*. It explains how these can be used together to form a career education curriculum and makes suggestions for adaptation of the materials for use in other settings.

Because the directories required such specialized formats and research techniques, the rest of the manual is devoted to describing the steps in their development. First, the manual discusses ways to gather, organize, and present data on occupational projections, and mentions the limitations of such data. The next section focuses on developing a directory of educational and training resources which relates education and training to careers. This section provides detailed guidelines for gathering, organizing, classifying, displaying, and updating the appropriate information. The same type of information is then provided for the directory of supportive services as well as for a card index system to the other two directories. Sample format pages and data collection instruments are included for all three directories.

SUBJECT AREA(S)

The subject areas include career education, career counseling, and curriculum development.

INTENDED USERS AND BENEFICIARIES

As its title suggests, this manual is intended for use by groups, organizations, or individuals interested or involved in developing career-related materials for use with or by adults. Its primary audiences are policymakers and practitioners involved in career counseling, manpower affairs, guidance, adult or continuing education, libraries, and placement. Although the project has collected and displayed data relevant to the needs of adults, the formats and procedures displayed in this manual are also appropriate for use by those working with inschool populations.

GOAL(S) OR PURPOSE(S)

The major goals of this project are: (1) To describe the principles, formats, and procedures used to create the career education project's curriculum materials for use with and by its adult clients; (2) to discuss procedures for adapting or replicating the project's career-related products; and (3) to serve as a prototype manual to provide the project with insight and feedback from other practitioners.

PATTERNS OF USE

This manual may be used with the four others in this series. It should help practitioners plan a program similar to the career education project. It may also be used independently by groups or individuals involved in creating career-related materials for adults. Further, it may serve as a guide to agencies interested in replicating specific localized directories or creating other informational materials.

ASSESSMENT PROVISIONS

The materials and information presented in this manual reflect what has been learned from the formative evaluation of over 2-1/2 years of providing career counseling to adults in an ongoing program. Further evaluation of the described activities will continue through the third year of project operation. After limited copies of the manual have been distributed, followup interviews will be conducted by telephone, by mail, and in person. Selected reviewers will assess its potential utility as a manual.

TIME REQUIREMENTS

Since this manual may be used by a variety of audiences in different settings, time requirements for implementing the described activities may vary.

IMPLEMENTATION PROCEDURES

Although this manual is independent and self-instructional, implementation of all of its described activities may require some reference to the other manuals in this series.

ASSURANCES AND CLAIMS

This manual contains products and descriptions of techniques used by staff and clients during 2-1/2 years of formative evaluation. The manual has not yet been distributed, so the developers cannot guarantee its transportability or harmlessness, although every attempt has been made to ensure that the manual will have these characteristics.

The manual has been carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, and inappropriateness of content.

ATTRACTING CLIENTS TO SERVICE-ORIENTED PROGRAMS (PRODUCT OF THE HOME/COMMUNITY-BASED CAREER EDUCATION MODEL III)

A product which discusses the principles and issues involved in advertising and promoting inservice oriented community-based career education programs

In order to obtain feedback and to help others interested in creating a similar program, the Career Education Project is producing experimental editions of a series of five manuals, each describing ways to plan, establish, and operate one of the project's major components. The series as a whole is designed to show how to plan, establish, and operate a comprehensive career counseling service for adults. However, individual manuals may be used independently by a wide variety of audiences.

As its title suggests, this manual can be used by any service-oriented program needing to attract clients. In addition to discussing the principles and issues involved in both public-service and commercial advertising, it explains the methods and procedures used by the project; provides samples of the advertisements, commercials, brochures, and other materials produced here; discusses the staff, skills, and materials required to attract clients; and suggests ways in which others can profit from the project's activities.

The first part of this manual stresses the importance of adequate preparation before recruitment or advertising efforts begin. This section deals with the need to define the service, audience, and advertising outlets; determines the budget; and prepares to evaluate effectiveness. The manual discusses specific ways to use information from these initial activities to create a unified campaign. It also deals with the use of advertising agencies and other outside sources of help.

The major part of the manual concerns the creation of products for the mass media, i.e., television, radio, and the press. In addition to presenting the advantages and limitations of each of these types of advertising, the manual provides guidelines for creating each type of mass media product and describes those techniques used by this project. There is a discussion of ways to distribute television and radio spots, place newspaper ads and articles, and arrange for guest appearances on radio and television shows.

Reinforcing the message is the theme of the next section, which first discusses using a variety of collateral products and techniques, such as brochures, posters, exhibits, and a telephone canvass. It then deals with the need for creating general community acceptance of a program and presents suggestions about implementing a community information program.

The final segment focuses on staffing an advertising component. Here, as in all the other sections, emphasis is placed on economic considerations, in view of the minimal budgets available to most service-oriented programs.

SUBJECT AREA(S)

The subject areas include career education, journalism, advertising, and public relations.

INTENDED USERS AND BENEFICIARIES

This program is intended for use by groups, organizations, and individuals involved in recruiting clients to an adult career counseling service or any other service-oriented program. Its primary audiences are practitioners, policymakers, advertisers, and communications teachers.

GOAL(S) OR PURPOSE(S)

The major goals of this program are: (1) To describe methods and techniques to attract clients to an adult career counseling service, (2) to describe ways to attract clients to any service-oriented program economically, (3) to share the career education project's outreach experiences with potential adapters of the service, and (4) to serve as a prototype manual about which the project can gain insight and feedback from other practitioners.

PATTERNS OF USE

This manual may be used along with the four others in this series to help practitioners establish a program similar to the career education project. It may also be used independently by groups or individuals involved in attracting clients to any service-oriented program. Finally, it may be used as part of an ongoing course concerned with advertising, public relations, or journalism.

ASSESSMENT PROVISIONS

The materials and information presented in this manual reflect what has been learned from the formative evaluation of more than 2-1/2 years of attracting clients to an ongoing service program. More than 5,000 clients have been attracted, at a steadily decreasing cost per client, through the use of the described materials and techniques. After limited copies of the manual have been distributed, followup interviews will be conducted by phone, by mail, and in person with selected reviewers to assess its potential utility as a manual.

TIME REQUIREMENTS

Since this manual may be used in many settings by a variety of audiences, the time requirements for implementing the described activities will vary.

DEVELOPER/AUTHOR:

Education Development Center, Inc.

Diane M. Disney, Director of Communications, Author

AVAILABILITY

Attracting Clients to Service-Oriented Programs is being produced under a developmental copyright granted in 1974. It will be available spring 1975 from:
Education Development Center, Inc.
55 Chapel St.
Newton, Mass. 02160

IMPLEMENTATION PROCEDURES

Although this manual is self-instructional to some extent, implementing the described activities may require some technical assistance from professional writers, producers, and others in the mass media.

ASSURANCES AND CLAIMS

This manual contains products and descriptions of techniques determined to be effective on the basis of more than 2-1/2 years of formative evaluation. The manual itself, however, has not yet been distributed, so the developers cannot guarantee its transportability or harmlessness even though every attempt has been made to insure that the manual will have these characteristics.

The manual has been carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content.

DESIGNING AND OPERATING A CAREER COUNSELING SERVICE FOR ADULTS (PRODUCT OF THE HOME/COMMUNITY-BASED CAREER EDUCATION MODEL III)

A manual to show how to plan, establish, and operate a comprehensive counseling service

In order to obtain feedback and to help others interested in creating a similar program, the Career Education Project is producing experimental editions of a series of five manuals, each describing ways to plan, establish, and operate one of the project's major components. The series as a whole is designed to show how to plan, establish, and operate a comprehensive career counseling service for adults.

Focusing on the project's counseling component, this manual deals with the design and operation of a telephone career counseling service using paraprofessional counselors who are supervised by professionals. After a brief description of some of the factors involved in planning such a service, the manual discusses the service's design, including an overall model of service-client interaction, methods for use in intake and initial counseling interviews, a supervisor-counselor-client process for identifying client needs and counseling issues, specific counseling procedures used in responding to client needs, and methods for termination and followup of clients.

The manual discusses the recruitment and selection of paraprofessional counselors, identifying a variety of criteria for selection and providing guidelines for use in interviewing applicants and making selection decisions. A section on the project's approach to training and supervision briefly presents the training model employed and illustrative training objectives.

In dealing with the nature and use of career-related resource materials in counseling, the next section provides summary descriptions of a number of specific materials and directories developed by project staff and used by counselors and clients.

The final section concerns recordkeeping and data-collection procedures and covers such related matters as methods of scheduling counseling interviews, storing client records, and collecting information at various stages of the counseling process.

SUBJECT AREA(S)

The subject areas include career education, career counseling, guidance, and psychology.

INTENDED USERS AND BENEFICIARIES

As its name implies, this manual is intended for use by any group, organization, or individual interested or involved in designing or operating a service to provide career counseling to adults. Its primary audiences are counselors, policymakers, administrators, and educators. It may also be used by persons interested in hiring and training paraprofessional counselors or in using the telephone as a service delivery mechanism.

GOAL(S) OR PURPOSE(S)

The major goals of this program are: (1) To describe the principles and issues involved in designing and operating a career counseling service for adults; (2) to explain the methods and procedures used and evaluated by the career education project's counseling component; (3) to describe the staff, skills, and materials necessary to have paraprofessionals provide career counseling by telephone; and (4) to serve as a prototype manual about which the project can gain insight and feedback from other practitioners.

PATTERNS OF USE

This manual may be used along with the four others in this series to help practitioners establish a program similar to the career education project. It may also be used independently by groups or individuals interested or involved in working with paraprofessional counselors or using the telephone as a mechanism for service delivery. Finally, it may be used as part of an ongoing course or training program for paraprofessional career counselors.

ASSESSMENT PROVISIONS

The materials and information presented in this manual reflect what has been learned from the formative evaluation of more than 2-1/2 years of providing career counseling to adults in an ongoing program. Further evaluation of the described activities will continue through the third year of project operation. After limited copies of the manual have been distributed, followup interviews will be conducted by phone, by mail, and in person with selected reviewers to assess its potential utility as a manual.

TIME REQUIREMENTS

Since this manual may be used by a variety of audiences in a variety of settings, the time requirements for implementing the described activities will also vary.

IMPLEMENTATION PROCEDURES

Although this manual is independent and self-instructional to some extent, implementing all of its described activities will require technical assistance from professional counselors, information from the other manuals in this series, or both.

ASSURANCES AND CLAIMS

This manual contains products and descriptions of techniques determined to be effective on the basis of more than 2-1/2 years of formative evaluation. The manual itself, however, has not yet been distributed, so the developers cannot guarantee its transportability or harmlessness even though every attempt has been made to insure that the manual will have these characteristics.

The manual has been carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content.

ESTABLISHING AND OPERATING A CAREER RESOURCE CENTER FOR ADULTS (PRODUCT OF THE HOME/COMMUNITY-BASED CAREER EDUCATION MODEL III)

Specific guidelines for establishing a resource center of career-related materials for adults

In order to obtain feedback and to help others interested in creating a similar program, the Career Education Project is producing experimental editions of a series of five manuals, each describing ways to plan, establish, and operate one of the project's major components. The series as a whole is designed to show how to plan, establish, and operate a comprehensive career counseling service for adults. However, individual manuals may be used independently by a wide variety of audiences.

This manual offers specific guidelines to those interested in establishing or expanding a resource center of career-related materials for adults as an adjunct to a career counseling service. On a broader scale, it offers suggestions about creating and operating any type of resource center or reference library by addressing several areas of general concern.

The first section of the manual stresses the importance of determining who will be using the collection and what types of materials they will need. It then discusses the available sources from which to acquire the necessary materials: Computerized information sources, Federal agencies and publications, State and local agencies, periodicals, pamphlets, catalogs, and books.

The manual also indicates how the operating practices should be designed to accommodate the ways in which the clients, staff, and general public will be using the collection. This leads to a discussion of staff requirements and procedures for ordering; recordkeeping; determining space, furnishings, and equipment needs; cataloging and classifying materials; and disseminating and circulating parts of the collection. In each instance, the manual addresses these considerations in terms of the methods and procedures used by the career education project's resource center. It also offers suggestions for possibly adapting the procedures to other situations.

Detailed appendixes to the manual's text provide ordering of sources for free and inexpensive occupational information, a list of books most frequently used by visitors to the project's resource center, and a partially annotated list of the 120 periodicals to which the resource center subscribes.

SUBJECT AREA(S)

The subject areas are career education, vocational guidance, and library service.

INTENDED USERS AND BENEFICIARIES

This manual is intended for use by groups, organizations, and individuals interested or involved in creating and operating a reference library of career-related materials. Its primary audiences are librarians, guidance counselors, adult educators, and placement officers. Although the project's collection has focused on materials for adults, many of the described ordering sources and organizational methods are also appropriate for use by those working with inschool populations.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To describe the principles and practices involved in planning, establishing, and operating a resource center of career-related materials for adults; (2) to share the career education project's experiences with others interested in developing or expanding a reference library of career-related materials; and (3) to serve as a prototype manual about which the career education project can gain insight and feedback from other practitioners.

PATTERNS OF USE

This manual may be used along with the four others in this series to help practitioners plan a program similar to the career education project. It may also be used independently by groups or individuals involved in establishing a reference library of career-related print materials. Individual sections of the manual may be used as self-contained units by readers interested in learning about such topics as using computerized information services, organizing occupational information, or maximizing staff and public use of a collection.

ASSESSMENT PROVISIONS

The materials and information presented in this manual reflect what has been learned from the formative evaluation of more than 2-1/2 years of providing career counseling to adults in an ongoing program. Further evaluation of the described activities will continue through the 3d year of project operation. After limited copies of the manual have been distributed, followup interviews will be conducted by telephone, by mail, and in person with selected reviewers to assess its potential utility.

TIME REQUIREMENTS

Since this manual may be used by a variety of audiences in different settings, the time requirements for implementing the described activities will vary.

IMPLEMENTATION PROCEDURES

Although this manual is independent and self-instructional to some extent, implementing all of its described activities might require technical assistance from professional librarians or information from the other manuals in the series.

ASSURANCES AND CLAIMS

This manual contains products and descriptions of techniques used by staff and clients for more than 2-1/2 years of formative evaluation. Since the manual has not yet been distributed, the developers cannot guarantee its transportability or harmlessness although every attempt has been made to ensure that the manual will have these characteristics.

The manual has been carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, and inappropriateness of content.

EXTERNAL DEGREE STUDY: A NEW ROUTE TO CAREERS (PRODUCT OF THE HOME/COMMUNITY-BASED CAREER EDUCATION MODEL III)

An alternative form of postsecondary education

This booklet has been designed for people who are considering a college education for career preparation but who find it difficult to participate in a traditional campus-bound college program. The booklet discusses external degree study, an alternate form of postsecondary education whereby one can earn college credits for study done at home, on the job, in fieldwork situations, and in part-time courses, as well as by traditional on-campus coursework. Emphasis is on describing external degree study and how it can be used for exploring careers, beginning and progressing in a career, and changing career direction.

The booklet discusses 13 important points to consider in choosing an external degree program including objectives and philosophy, assessment of prior learning, residency, curriculum and learning options, and methods of evaluation. It provides descriptions of nine established external degree programs in New York and New England, and the names and addresses of other similar programs across the country.

The next booklet section provides guidelines for planning a learning experience through assessing prior learning, designing a study plan, and incorporating career goals. Several case studies of external degree students are included to illustrate various ways such study can be arranged. The text concludes with a section on how to use an external degree to acquire additional skills or to get a job.

Because external degree study is such a relatively new concept, the booklet includes a glossary of commonly used terms in the field. There is an appendix of eight resource sections covering topics such as: further information on external degree study, self-assessment and goal setting for the college student, and locating learning opportunities.

SUBJECT AREA(S)

Career education, nontraditional study, external degree study, continuing education, vocational and educational guidance, and counseling are the subject areas.

INTENDED USERS AND BENEFICIARIES

This booklet is intended for use by adults who are interested in postsecondary education but who are unable or unwilling to attend a traditional college; current external degree students; and those groups, organizations, and individuals involved in counseling prospective or current students. In the third category, it is especially appropriate for external degree program advisers and counselors.

GOAL(S) OR PURPOSE(S)

Booklet goals are: (1) To familiarize adults with external degree study as a nontraditional form of education; (2) to help adults determine whether external degree study will meet their career needs; (3) to help readers select an external degree program appropriate for their needs; (4) to illustrate ways in which external degree study programs can be designed to meet career objectives; (5) to provide a listing of major external degree programs in the United States; and (6) to serve as a prototype which can provide the project with insight and feedback from other practitioners.

PATTERNS OF USE

External Degree Study: A New Route to Careers may be used by academic, vocational, or career counselors as a source of information or as a supplement to individual counseling sessions. It may also be used independently by adults interested in nontraditional study as a guide to their own career planning.

ASSESSMENT PROVISIONS

This booklet reflects that which has been learned through investigation and analysis of external degree programs. Portions of the booklet include information and ideas that have been used with the career education project's clients; other portions summarize data prepared for the National Institute of Education. To date, the booklet as a whole has been reviewed only by staff. After copies have been distributed, followup interviews will be conducted by phone, by mail, and in person. Selected reviewers will assess its potential utility as a booklet.

TIME REQUIREMENTS

Since this product may be used by a variety of audiences to meet individual needs, the time requirements for implementing the described activities will vary.

IMPLEMENTATION PROCEDURES

Although this product is independent and self-instructional, some readers might find it helpful to have some assistance from academic or career counselors in implementing the described activities. Some might also find it helpful to use *External Degree Study: A New Route to Careers* in conjunction with other career education projects publications, especially *The Career Development Series* and *From Liberal Arts and Sciences to Careers: A Guide.*

ASSURANCES AND CLAIMS

This product contains information and descriptions of techniques reflecting several years of research and other activity. The booklet itself has not yet been printed or distributed, so the developers cannot guarantee its transportability or harmlessness although every attempt has been made to insure that the booklet will have these characteristics.

This booklet has been carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, and inappropriateness of content.

FROM LIBERAL ARTS AND SCIENCES TO CAREERS: A GUIDE (PRODUCT OF THE HOME/COMMUNITY-BASED CAREER EDUCATION MODEL III)

A booklet to help students to identify and develop professional competencies resulting from liberal arts studies and experiences

Designed to assist people who have been considering, engaged in, or graduated from programs in the Liberal Arts and Sciences (LAS), this booklet is based on the concept of identifying and developing competencies—what people know and can do as the result of their study and experiences. This approach suggests that students can develop skills which are applicable to a wide spectrum of careers while studying an arts or sciences discipline.

The booklet briefly discusses how the general state of the labor market and a lack of career planning skills have resulted in unemployment, underemployment, and relatively low earnings for LAS graduates generally, and additional problems facing women and minorities. Ways of coming to grips with this situation are discussed next.

The first section of the booklet deals with career focus. It includes suggestions on self-assessment and learning about occupations. This is followed by a section on developing a plan of action, with particular hints for LAS students and graduates. The booklet also describes ways of acquiring skills and knowledge after graduation—through graduate schooling, professional training, nondegree study, and other methods. The remaining part of the booklet is concerned with the job search. After dealing with a number of ways to locate a job opening, the booklet discusses ways to answer a lead and to present one's qualifications through the résumé, the application form, and the interview.

To illustrate various concepts, the booklet includes sample letters and résumés, charts of possible career options for liberal arts majors, and a chart suggesting ways LAS students can plan their course of study to acquire specific competencies.

SUBJECT AREA(S)

The subject areas include career education, continuing education, liberal arts and sciences, vocational and educational guidance, counseling, and competency-based learning.

INTENDED USERS AND BENEFICIARIES

This product is intended for use by liberal arts and sciences students and graduates as well as groups, organizations, and individuals involved in teaching, counseling, or placement. It is appropriate for college advisers, college placement officers, and high school guidance counselors.

GOAL(S) OR PURPOSE(S)

The major goals of this booklet are: (1) To provide an overview of the problems liberal arts and sciences graduates face in the labor market, (2) to illustrate ways in which a liberal arts and sciences program can be adequate preparation for many careers, (3) to introduce career planning approaches to an LAS education, (4) to provide possible career options for LAS graduates, and (5) to serve as a prototype to provide the career education project with insight and feedback from other practitioners.

PATTERNS OF USE

The booklet may be used by individuals considering, engaged in, or graduated from liberal arts and sciences programs. It may also be used by career counselors, guidance counselors, or placement officers at the high school or college level—either as reference material or as an adjunct to academic or career counseling sessions. It may further be used as part of a high school, junior college, or college orientation session.

ASSESSMENT PROVISIONS

The materials and information presented in this product reflect that which has been learned from the formative evaluation of 2-1/2 years of providing information, guidance, and referrals to career-concerned adults. The document is also an expanded and revised version of a series of project-produced booklets which have been used for the past year. Both counselors and clients are currently being asked to evaluate the material's utility. After copies of this version have been distributed, followup interviews will be conducted by telephone, by mail, and in person. Selected reviewers will assess potential utility.

TIME REQUIREMENTS

Since this product may be used by a variety of audiences to meet individual needs, the time requirements for implementing the described activities will vary.

IMPLEMENTATION PROCEDURES

Although this booklet is independent and self-instructional, some readers might find it helpful to have some assistance from a career or an academic counselor in implementing the described activities. Some might find it helpful to use this booklet in conjunction with other career education project publications, especially *Women and the World of Work* and *External Degree Study: A New Route to Careers.*

ASSURANCES AND CLAIMS

This booklet contains products and descriptions of techniques determined to be effective on the basis of more than 2-1/2 years of formative evaluation. Since the manual has not yet been distributed, the developers cannot guarantee its transportability or harmlessness even though every attempt has been made to insure that the booklet will have these characteristics.

The booklet has been carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, and inappropriateness of content.

INTEGRATING RESEARCH AND EVALUATION INTO THE OPERATION OF SERVICE-ORIENTED PROGRAMS (PRODUCT OF THE HOME/COMMUNITY-BASED CAREER EDUCATION MODEL III)

A manual to help plan, establish, and operate a comprehensive counseling service

In order to obtain feedback and to help others interested in creating a similar program, the Career Education Project is producing experimental editions of a series of five manuals, each describing ways to plan, establish, and operate one of the project's major components. The series as a whole is designed to show how to plan, establish, and operate a comprehensive career-counseling service for adults. However, individual manuals may be used by a wide variety of audiences.

Experience has shown that when research and evaluation are incorporated into a service-oriented program, a number of difficulties generally arise that can adversely affect the delivery of the service, limit the usefulness of the evaluation, or both. Decisionmakers, whether they be funders, administrators, staff, or evaluators, therefore need to be made more aware of the issues and problems that arise when evaluation is interfaced with a service program. This manual attempts to increase that awareness by presenting a model in which research and evaluation have been integrated into the operation of an ongoing service program.

The manual discusses each research and evaluation activity of the Career Education Project in relation to the program's evolution, and associates the issues and problems of evaluation with the project's response to each through its processes and products. The process discussion includes the various types of research activities (needs assessment; goal definition; research design; data collection, processing, and analysis; and information dissemination) and the interactions among coworkers. The products described include data collection instruments, coding formats, and other documents. Numerous samples of these products are also included.

The manual further discusses the skills and abilities necessary for a research and evaluation staff to perform effectively within a service-oriented program, and presents some suggestions for alternative approaches for other programs.

SUBJECT AREA(S)

Career education, educational research, evaluation, and behavioral research are the subject areas.

INTENDED USERS AND BENEFICIARIES

This manual is intended for use by groups, organizations, or individuals interested or involved in integrating research and evaluation into the operation of service-oriented programs. Its primary audiences are policymakers and practitioners involved in career counseling, educational research and evaluation, and service-oriented programs. Although the processes and products described are related specifically to the needs of the Career Education Project, the formats and procedures may also be easily adapted for use by those working in other types of programs.

GOAL(S) OR PURPOSE(S)

The goals of this program are: (1) To describe the principles and issues involved in integrating research and evaluation into the operation of service-oriented programs; (2) to discuss the procedures and formats employed by the research and evaluation component of the Career Education Project; (3) to provide guidelines and materials for use or adaptation by evaluators or human service administrators; and (4) to serve as a prototype manual about which the project can gain insight and feedback from other practitioners.

PATTERNS OF USE

This manual may be used with the four others in this series to help practitioners establish a program similar to the Career Education Project. It may also be used independently by groups or individuals involved in designing or managing research and evaluation activities for service-oriented programs. Further, the data formats presented may be used or adapted for use in other settings.

ASSESSMENT PROVISIONS

The materials and information presented in this manual reflect what has been learned from the formative evaluation of more than 2-1/2 years of providing career counseling to adults in an ongoing program. Further evaluation of the described activities will continue through the 3d year of the project operation. After limited copies of the manual have been distributed, followup interviews will be conducted by phone, by mail, and in person with selected reviewers to assess its potential utility as a manual.

TIME REQUIREMENTS

Since this manual may be used by a variety of audiences in different settings, the time requirements for implementing the described activities will vary.

IMPLEMENTATION PROCEDURES

Although this manual is independent and self-instructional to some extent, implementing all of its described activities will require technical assistance from professional evaluators, information from the other manuals in this series, or both.

ASSURANCES AND CLAIMS

This manual contains products and descriptions of techniques used by staff during more than 2-1/2 years of formative evaluation. The manual itself, however, has not yet been distributed, so the developers cannot guarantee its transportability or harmlessness even though every attempt has been made to insure that the manual will have these characteristics.

The manual has been carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, and inappropriateness of content.

BIBLIOGRAPHIES OF CAREER-RELATED MATERIALS (PRODUCT OF THE HOME/COMMUNITY-BASED CAREER EDUCATION MODEL III)

A shelf collection list and a series of annotated bibliographies of career-related materials

For more than 2 years, the Career Education Project has maintained a resource center of career-related materials for use by the project's clients, counselors, and other staff members, as well as the general public. This product presents both a shelf collection list and a series of annotated bibliographies of the resource center's cataloged collection.

The first section of this booklet presents a complete bibliographic citation for each cataloged publication in the collection. Each citation includes such information as author, title, place and date of publication, publisher, ordering source (if different from publisher), number of pages or volumes, and price and type (hardcover or paperback). The approximately 1,400 entries are arranged by library classification numbers, based on the Educational Resources Information Center (ERIC) system. They are accompanied by a subject index which covers over 60 major terms including adult counseling, career planning, employment projections, testing, financial aid, counselor training, evaluation, occupational information, paraprofessional personnel, working women, minority groups, and educational research. The publications in the list have been acquired from commercial publishers, the ERIC system, private agencies and organizations, conferences and seminars, professional associations, and State, local, and Federal governments. The list also indicates which items are annotated in the second section of the booklet.

Section II presents annotated bibliographies of materials in seven major topic areas of the cataloged collection. Four of these categories include materials of use to counselors and clients: Financial aid directories, educational and training resources directories, occupational information, and the job search. The other three—counseling, career education, and women—contain materials primarily useful to counseling, education, and other professions.

SUBJECT AREA(S)

The subject areas include career education, counseling, vocational and educational guidance, postsecondary education, paraprofessional training, research and evaluation, and women's studies.

INTENDED USERS AND BENEFICIARIES

This product is intended for use by librarians, guidance counselors, adult educators, placement officers, and career education program planners.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To offer a basis for selecting career-related materials, (2) to provide a comprehensive listing of the cataloged materials available in the career education project's resource center, and (3) to serve as a prototype to provide the project with insight and feedback from other practitioners.

PATTERNS OF USE

The shelf collection list and the annotated bibliographies may serve as the basis for selecting particular types of career-related materials. Although the product may be used independently, it may also be used with other project publications to establish a career education or counseling service for adults.

ASSESSMENT PROVISIONS

This booklet reflects what has been learned from 2 years of collecting career-related materials and informally evaluating their use with and by the project's clients, counselors, and other staff members as well as other resource center visitors. The booklet as a whole, however, has not developed to the extent that would permit formal evaluation. After it has been completed and copies have been distributed, followup interviews will be conducted by telephone, by mail, and in person. Selected reviewers will assess its potential utility.

IMPLEMENTATION PROCEDURES

Although this product is independent, many readers may find it helpful to have assistance from professional librarians in selecting and acquiring the described publications. Some readers may also find it helpful to use the product in conjunction with the project's series of manuals designed to show how to establish and operate a career counseling service for adults. The one manual in this series which should prove valuable in this context is *Establishing and Operating a Career Resource Center for Adults.*

RD 080 009

ASSURANCES AND CLAIMS

This booklet contains descriptions of materials collected and used by project staff and clients during the past 2-1/2 years. The booklet has not yet been distributed, so the developers cannot guarantee its transportability or harmlessness although every attempt has been made to insure that the booklet will have these characteristics.

The booklet is being carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, and inappropriateness of content in its text.

REPORT OF FIFTY SELECTED CENTERS OFFERING CAREER COUNSELING SERVICES FOR WOMEN (PRODUCT OF THE HOME/COMMUNITY-BASED CAREER EDUCATION MODEL III)

A telephone study of selected counseling centers to collect data for the purpose of improving a research and development model

Paraprofessional career counselors at the career education project have been providing information, guidance, and referrals to career-concerned adults for more than 2-1/2 years. During this time, the project has evolved into a unique research and development model consisting of five major components. The core component, counseling, is supported by three others—outreach, information unit, and research center—and the effectiveness of these four is gauged by research and evaluation.

As part of the effort to improve this model, the project has collected and reviewed literature in numerous related fields. In spring 1974, the staff conducted a telephone study of 50 selected career counseling centers for women across the country. This product is a report of that study.

The 50 agencies, programs, services, and centers studied were identified from 4 primary information sources: The U.S. Labor Department's Women's Bureau, the International Association of Counseling Services' Directory, the Catalyst network, and materials collected by the project's Resource Center. Each of the centers offered career counseling services to at least 50 women per year; none of them had placement as its sole or major purpose. In all, they had a variety of sponsors and fees and were located in 22 different States and the District of Columbia.

In addition to an overview of the findings, the report provides a 2-page summary description of each center. The factors covered are: The agencies' origins, organizational structure, budget, sources of support, clientele, staffing, office hours, publicity, objectives, career-related services (such as individual and group counseling, courses, seminars, testing, and library facilities), evaluation data, and plans. The report also includes a similar description of the career education project.

SUBJECT AREA(S)

Subject areas involve career education, career counseling, vocational and educational guidance, and women's studies.

INTENDED USERS AND BENEFICIARIES

This report is intended for use by anyone involved in planning, establishing, or operating a career counseling service for women. It is also appropriate for anyone interested in studying such services.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To furnish an overview of centers across the country providing career counseling services to women; (2) to describe 50 such centers, as well as the career education project, in detail; and (3) to serve as a mechanism for the exchange of information among such centers.

PATTERNS OF USE

This report may be used as a research document to provide information about centers across the country offering career counseling services to women. It may also provide insight to policymakers and practitioners interested or involved in designing, establishing, or operating such a center.

ASSESSMENT PROVISIONS

The directors of the 50 centers have reviewed and approved the description of their programs. Copies of the entire report have also been distributed to the National Institute of Education, the 50 centers, and other interested parties for use and review.

ASSURANCES AND CLAIMS

This report has been distributed to agencies and individuals in 23 States and the District of Columbia, thereby demonstrating its transportability. Its developers have received no reports of harm associated with its use.

The report is intentionally biased in that it reflects a survey of centers offering services to women. Aside from this factor, however, the text has been carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, and inappropriateness of content.

CHRIS BEGINS AGAIN

A film produced to illustrate the career-related needs of adults

For more than 2-1/2 years, the Career Education Project has been developing and testing ways of meeting the career-related needs of adults. The core of the service has been the use of paraprofessional career counselors to provide information, guidance, and referrals by telephone. Their efforts have been supported by those of a resource center which collects and circulates career-related materials, an information unit which packages this information in useful formats for clients and counselors, and an outreach component which informs the public of the service. A research and evaluation unit has continually informed the rest of the staff about the program's development and has described the client's characteristics, needs, and outcomes.

This 25-minute film, "Chris Begins Again," has been produced to illustrate the ways these components meet the clients' needs. In semidocumentary fashion, the film traces the daily activities of one client, 30-year-old Christine S. explains the reasons for contacting the project. She describes the changes career counseling has made in her life.

The film provides interviews with Christine's paraprofessional counselor, the project director, and the people in charge of the five major components. It also includes one of the project's televised public service spots and shots of components in action.

SUBJECT AREA(S)

The subject areas include career education, continuing education, counseling, and vocational and educational guidance.

INTENDED USERS AND BENEFICIARIES

Chris Begins Again is primarily intended for use by policymakers and practitioners in the fields of education and counseling who would be interested or involved in working with career-concerned adults or in establishing a program similar to that of model III.

GOAL(S) OR PURPOSE(S)

The major goals of this film are: (1) To identify the components of the home/community-based career education project, (2) to illustrate the ways these components relate to and reinforce each other to meet clients' needs, and (3) to depict the experiences of one client to illustrate the impact of career decisionmaking in life.

PATTERNS OF USE

This film may be used independently or as part of a presentation on career education or counseling.

TIME REQUIREMENTS

The film is 25 minutes long.

IMPLEMENTATION PROCEDURES

Showing the film requires only a 16mm sound projector and a projectionist. Because the film is illustrative, people interested in learning more about the depicted activities would find it useful to have copies of the project-produced manuals on establishing and operating the various components, and technical assistance from the project's developers.

ASSURANCES AND CLAIMS

Technically the film can be shown wherever there is a projectionist with a 16mm sound projector. It is readily transportable as a film. Its value as a descriptive product will be tested during spring and summer 1975 when it is sent to individuals and organizations for use alone and as part of a presentation made by project staff members.

The script, footage, and preliminary prints have been carefully screened to eliminate any form of harm, social bias, ethnic or sexual stereotyping, or inappropriateness of content.

TALKING WITH CLORAE AND ALBIE (WORKING TITLE, PRODUCT OF THE HOME/COMMUNITY-BASED CAREER EDUCATION MODEL III)

A film to make young people aware of some of the problems and solutions encountered in the search for career training

Clorae Prince and Elvernoy (Albie) Holland are friends in their early twenties. They met in Upward Bound, where they described themselves as having been very "tough" young girls. Both had been poor students at Cambridge High and Latin, the public high school in a city of 100,000 that is adjacent to Boston. Both were school dropouts, but their lives were different after dropping out.

Clorae falls in love with a glamorous jazz musician. They marry and Clorae soon finds herself burdened with all the household responsibility, plus entertaining her husband's friends. They become divorced. Clorae works hard to care for her three young children. Clorae is getting her high school diploma on a scholarship at Shaw Prep, a private alternative high school. She plans to be a nurse and knows how she will get her training.

After Albie drops out of school, the jobs she gets are boring and low paying. She finishes her high school work at Shaw Prep and takes the Scholastic Aptitude Test (SAT). She does very badly on the SAT. Despite this, Marlboro College in Vermont is trying to recruit black students at this time, and Albie receives a scholarship to attend. She is one of two blacks and finds the situation difficult. She stays at Marlboro for 2 years. She then returns to Cambridge and again has a series of low-level jobs. Finally, she enrolls in the University of Massachusetts—Boston's College Three, which emphasizes social and community services. She has her own apartment and supports herself with a research job for the Boston Women's Collective.

Another person in the film is Linda Walsh, a white married woman in her early thirties with two children. She needs to find self-fulfillment through a career. When her children are old enough to be left home, she begins to work as a secretary. After 1 year, she becomes dissatisfied with her limited role. She also enrolls in College Three and works at the Boston Women's Collective. Many issues are brought out in the film: That women cannot rely on the myth of "happily ever after"; that counseling and career training are available and useful; that it is never too late to begin working toward a career; and that great obstacles to self-determination can be overcome.

SUBJECT AREA(S)

Career education, sociology, social studies, cultural anthropology, guidance, and urban studies are the subject areas.

INTENDED USERS AND BENEFICIARIES

This film is intended for use with high school students, teachers, and adults, particularly women.

GOAL(S) OR PURPOSE(S)

The major goal of this film is to make young people aware of some of the problems and solutions in the search for career training.

PATTERNS OF USE

This film may be used as the basis for a minicourse or as part of an ongoing course in several subject areas. It may also be used for guidance or for awareness discussions.

ASSESSMENT PROVISIONS

Formative evaluation of the film will be conducted during program development. Upon completion, there will be independent field trials on a limited basis using feedback questionnaires.

TIME REQUIREMENTS

Using the film with the print materials can take from 3 days to 6 weeks. The film itself runs 30 minutes.

IMPLEMENTATION PROCEDURES

The film requires a 16mm sound projector and a teacher or group leader.

MATERIALS AND EQUIPMENT

Equipment needed to use this film is a 16mm sound projector.

ASSURANCES AND CLAIMS

The information gathered during the development period indicates that the film can be used alone, by a teacher, or group leader, and is readily transportable.

The script and footage have been carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriate content.

CAREER GUIDANCE UNITS

A program to help students gain greater understanding of themselves by facilitating development of exploratory and decisionmaking skills

The Career Decisionmaking Program forms a core around which a comprehensive Career Education Program can be developed for the secondary school level. It is designed to help students gain greater understanding of themselves and the world of work by facilitating the development of exploratory and decisionmaking skills. The program has two products: 15 *Career Guidance Units* and a supportive *Career Information System* based on the *Dictionary of Occupational Titles* (DOT), 3d edition, 1965.

The *Career Guidance Units* enhance student skills in exploration of self and the world of work, and in the decisionmaking process by which career-related information can be utilized. They emphasize the processes by which information is gathered, evaluated, and used, and the content of that information. Thus, the units help prepare students to respond to new information and changes in themselves and their environment.

The units center on student activities in a group-guidance setting. The content and format are appropriate to the developmental level of secondary school students. The units are designed to help students meet the demands or expectations school and society hold for them at this stage in their development. The materials and activities provide flexibility in mode and level to accommodate a wide range of students. Each unit addresses specific objectives which are related to the career decisionmaking program objectives.

The counselor/teacher directs class activities, shows filmstrips, and facilitates discussion, aided by a utilization guide which contains detailed lesson plans for each unit. The counselor/teacher is expected to set the climate so that students recognize that their personal values and the things they want to be, or do, are just as worthy as the goals of others. The utilization guide includes suggestions for additional activities. Local schools can build in their own optional exercises, such as aptitude testing, field trips, and directed work experiences.

SUBJECT AREA(S)

The *Career Guidance Units* facilitate the development of career exploration and decisionmaking skills. The titles of the units are: (1) Career Awareness, (2) Self-Exploration, (3) Occupational Information, (4) Decisionmaking, (5) Interests, (6) Work Activities, (7) Work Situations, (8) Aptitudes, (9) Work Conditions, (10) GED and School, (11) Work and Leisure Experiences, (12) Economic Influences, (13) Social and Family Influences, (14) Career Planning, and (15) Your Future.

INTENDED USERS AND BENEFICIARIES

Designed for use with secondary school students of all abilities, the unit materials have been used effectively in grades 10, 11, and 12 during school year 1973-74 field testing. Included in the field tests were students from various social, economic, geographic, and cultural backgrounds. During school year 1974-75, the units are being field tested in grades 8, 10, and 11.

GOAL(S) OR PURPOSE(S)

The units are designed to help students gain greater understanding of themselves and the world of work by facilitating their development of exploratory and decisionmaking skills.

The units help students: (1) To identify career activities as a means of life goals, (2) to use self-exploration and occupational exploration in shaping their careers, (3) to demonstrate the ability to use the decisionmaking strategy, (4) to relate personal characteristics to occupations in order to identify and evaluate career alternatives, (5) to identify major influences affecting career decisions and career development, (6) to identify ways in which the society and self interact through their careers, and (7) to demonstrate the ability to manage the variables involved in shaping a career.

Upon completion of the units, students should be able to formulate career plans which are consonant with their personal characteristics, goals, and the opportunities available.

PATTERNS OF USE

The *Career Guidance Units* form career exploration and decisionmaking activities into manageable segments for implementation into typical secondary school programs.

The first four units are addressed to the central concepts of career, self-exploration, occupational exploration, and decisionmaking. These units introduce basic exploration and decisionmaking skills within the framework of career. Students use these skills throughout the course. Units 5 through 10 use the career information system to provide experiences in exploration of worker trait groups and occupations in terms of personal characteristics. In units 11 through 13, students examine the effects of major social, environmental, and economic influences on career. The final two units help students utilize exploration and decisionmaking skills in developing or clarifying career plans, and in making tentative occupational choices.

The units may be presented as a separate course or integrated into existing subject matter areas, particularly the language arts or social studies. They may also be used by counselors or teachers with small groups. The introductory and concluding units (1-4, 14-15) should be presented in order, but the other units may be used in any sequence.

ASSESSMENT PROVISIONS

A pretest is provided to determine students' degree of knowledge and career development prior to using the units. Posttests are utilized upon completion of the units to determine whether students have mastered the objectives of the program. The counselor/teacher is provided with specific behavioral objectives against which to check students' performance of unit activities. However, procedures for evaluating unit activities are not provided.

Personnel Required for Product Adoption and Implementation

No special personnel are required for use of the *Career Guidance Units*.

ASSURANCES AND CLAIMS

The counselors/teachers at the schools participating in the 1973-74 field test of units 1-8 or those at the two schools completing the field testing of all units during the first semester 1974-75 have not indicated either orally or in writing any potentially harmful effects. Interviews have been conducted with both students and counselor/teachers to identify materials and activities they feel are inappropriate or that need to be revised.

The unit materials have been carefully developed to adhere to social fairness standards (e.g., regarding gender, racial/ethnic, religion, economic). In the 18 filmstrips, white (73 percent), blacks (21 percent), and other minorities (7 percent) are shown in proportions fairly representative of the general population. Men (60 percent) are shown in greater proportion than women (40 percent). Men and women are, however, shown in nonstereotyped roles. All ages are represented although the 14-18 age range is predominant because of the audience. Leading characters are portrayed by blacks, whites, other minorities, males, females, and persons of divergent socioeconomic backgrounds. Of the four filmstrips entered into the 1975 national vocational guidance association film festival, two were given highest ranking and the other two were recommended based upon a view of content, technical considerations, the user's guide, and social orientation.

The *Career Guidance Units* have been field tested successfully in West Virginia and Utah with no developer assistance. Additional unassisted field test sites (involving approximately 250 high school students) in West Virginia and Georgia will be completed by June 1975. For the field testing of half of the units (1-8) during the 1973-74 school year, preliminary data indicated a small but significant increase between pretest and posttest scores of students on a standardized test of career maturity and a program-specific test based on program objectives. Comparison groups showed no increase. By July 1975, data will have been analyzed from schools field testing all 15 units. This data will include pretests and posttests along with student and counselor/teacher interviews.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student booklets and handouts	1 set per student	*	Consumable	
Student summary folder	1 per student	*	Consumable	Commercial publisher to be announced
Counselor/teacher utilization guides	1 set per school	*	Reusable	Commercial publisher to be announced
Paper clip game	1 per group	*	Parts reusable, parts consumable per student	Commercial publisher to be announced
Filmstrips and cassettes	1 set per school	*	Reusable	Commercial publisher to be announced
Career information system materials	1 set per school	**	Reusable	Commercial publisher to be announced
Automatic or manual filmstrip projector/cassette tape player	1 per school	100.00-325.00	Reusable	Commercial publisher to be announced
Interest inventory and scoring	1 per student	1.00	Parts reusable, parts consumable by each student	Commercial publisher to be announced

*The estimated cost for the *Career Guidance Units* is $800-$1,000. This product includes a self-contained inservice package, utilization guides, filmstrips, and a classroom set of student materials.

**The estimated cost of the Career Information System is $500-$600, which includes multiple copies of guides, indexes, filmstrips, and decks of Keysort cards.

INFORMATION CURRENT AS OF MARCH 1975 ■

CAREER INFORMATION SYSTEM (CIS)

A system designed to serve as the career information component of career education programs

The Career Decision-Making Program forms a core around which a comprehensive *Career Education Program* can be developed for the secondary school level. It is designed to help students gain greater understanding of themselves and the world of work by facilitating the development of exploratory and decisionmaking skills. The program has 2 basic products: 15 career guidance units and a supportive career information system based on the *Dictionary of Occupational Titles* (DOT), third edition, 1965.

The *Career Information System* (CIS), although used with the guidance units, may be considered a separate product. It serves as an organization and management system for career information resources. The CIS is designed to organize available resources into a common system so they are readily available and accessible to students, counselors, and teachers. It accommodates a wide range of resources such as occupational briefs, bound occupational information, audiovisual materials, VIEW, filmstrips, classroom experiences, speakers, employer site experiences, simulation, and games.

The Worker Trait Group (WTG) arrangement of the DOT is used as the basic structure of the CIS. All career information resources that can be linked with occupations or with Worker Trait Groups (WTG's) are indexed and/or filed by worker-trait groups.

Since one of the goals of career education is to expand individual awareness and understanding of the world of work, the career exploration process must include access to resources identified by means other than occupational titles. More specifically, an individual should be able to move from a base of self-understanding to related occupations. The CIS consists of basic guides, filmstrips, Keysort cards, charts, checklists, and other access materials designed to assist individuals in understanding concepts and to relate self-understanding to occupations.

SUBJECT AREA(S)

The CIS is designed so that it can serve as the career information component of career education programs. The primary focus is upon managing and accessing career information resources to facilitate exploration and decisionmaking.

INTENDED USERS AND BENEFICIARIES

The prime users are intended to be secondary school students, but the CIS is also a valuable reference for guidance counselors and classroom teachers. Although designed for the secondary school level, the CIS, with modification, could serve as the information component in postsecondary institutions or in special career education programs. Career information resources entered into the system should be either directly accessible to students or indirectly available through scheduling. The system can also accommodate materials used by teachers and counselors in planning supervised guidance activities.

GOAL(S) OR PURPOSE(S)

The major purpose of the CIS is to organize all available career information resources in a setting into a common system to provide easy student access. CIS materials are designed to assist students in clarifying their personal characteristics in terms of the worker-trait components on which access is based. The system and accompanying materials provide students a way of linking themselves to the world of work for meaningful career exploration and decisionmaking. Since meaningful career exploration should focus upon the individual, the worker characteristics may be used to develop self-understanding and insights into occupations.

PATTERNS OF USE

The CIS does not require a sequential usage pattern. The system may be used by counselors in group and individual guidance, by teachers in subject courses, or as part of a total career education program. Several access routes have been developed which facilitate the use of materials for a variety of purposes ranging from course selection to job placement. Career education, to be effective, should be infused into the curriculum with appropriate activities related to the career development needs of students. The CIS provides linkages to curriculum through a chart relating school subject areas and courses to worker-trait groups. An index has also been developed for relating WTG's and occupations to subject areas. This index includes suggestions on how teachers can relate their subject matter to career exploration activities.

A manual system for accessing occupational information on a multivariable basis has been developed through the use of Keysort cards. This manual system is a deck of 114

Keysort cards, each representing one of the worker-trait groups. Significantly related worker characteristics are punched on the cards' edges, thus providing a means for identifying all groups related to a particular variable or set of variables. By inserting a sorting needle through the coded hole for a particular variable, the related worker-trait group cards will fall from the deck. In this manner, worker-trait groups can be identified which are meaningful for each individual. This manual technique is easily adaptable to computerization. Initial efforts are being made to develop both batch and interactive computer processing as part of the CIS.

ASSESSMENT PROVISIONS

The *Career Information System* may be assessed by (1) the way in which it facilitates the storage and retrieval of all exploration resources and (2) the degree to which it contributes to meaningful career exploration and decisionmaking.

TIME REQUIREMENTS

The time requirements for setting up the CIS will depend upon the number and variety of career resources available within a setting. A minimum of 40 person-hours is required to code, index, and file occupational briefs into the system. Three major sources of commercial briefs (SRA, Chronicle, and Careers) have been indexed into the system along with other major occupational information references. An alphabetical card file and a file content notebook need to be set up for these and other available career information references.

Time requirements related to use of the CIS are dependent entirely upon the career education activities in a particular setting. Typically, each student, teacher, and counselor involved should use the system several times during a school year.

IMPLEMENTATION PROCEDURES

The location in which the system is to be installed depends upon the function it is to serve within a Career Education Program. The CIS should be readily accessible to students in a location such as a career resource center or library. Since the CIS lessens the student dependency upon a counselor or supervisor to obtain information, the setting is important. Career information resources may be located in several places, but their location can be identified through indexing procedures.

Resources are organized in the CIS by worker-trait groups. They have been assigned a sequence number which serves as an index. Occupational information can be processed into the system by using a standard method of classifying occupational titles according to their appropriate worker-trait group and by filing and indexing the sources. Detailed procedures for setting up and maintaining the system have been developed.

Maintenance procedures for the CIS are similar to those employed with any career information system. Resources need to be checked periodically to make sure they have been refiled properly, and outdated materials need to be removed from the system. Additional career exploration resources should be added to the system as time, funds, and use permit.

Two filmstrips are provided to orient teachers and students to the CIS. Each of the basic guides has an introductory section which provides information on how it may be used. Access materials may be introduced by the teacher/counselor as part of an organized career exploration activity.

Personnel Required for Product Adoption and Implementation

No special personnel are required for the use of the *Career Information System*.

ASSURANCES AND CLAIMS

The CIS is being field tested in 37 sites located in 16 States representing a wide range of geographical locations and a variety of settings. To date, none of the personnel administering the system has indicated any potentially harmful effects. During school year 1974-75, midyear and yearend evaluations will provide data on CIS use, problems, and suggestions for improvements. These evaluations will be used to revise the materials before final publication.

CIS materials have been carefully developed to adhere to social fairness standards (e.g., sexual, racial/ethnic, religious, economic). All materials have been written to an 8th-grade vocabulary level using the Thorndike/Lorge Word Frequency List.

The CIS can be installed by school personnel. In several cases, students and teacher aides have been used. A spot check on the accuracy of installation revealed only minor errors. A checklist was subsequently provided to all installation sites to eliminate these errors.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed*	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

RD 080 015

OPERATION GUIDANCE (AN ELEMENT OF CPSS, THE CAREER PLANNING SUPPORT SYSTEM)

A self-help program aimed at providing high schools with the capability to improve career guidance programs

Traditionally, the responsibility of helping students with career planning has been shouldered by schools. Unfortunately, high school career planning services, in general, have been either nonexistent or relatively ineffective. The primary medium for delivering career-planning assistance to students has been career guidance programs. However, limited national assessments of career guidance programs, such as those conducted by Herr (1968), Ehrle (1969), Gelatt (1969), Rosen (1969), and Ginzberg (1971), have indicated that career guidance programs have been neither effective nor efficient. Campbell, after a national survey (1968), concluded that high schools attempt to offer more career guidance services than they can effectively support with available and realistically obtainable resources.

Operation Guidance is a self-help program aimed at providing high schools with the capability to improve the career development skills of their students. As an educational innovation, it sets the climate for improving career planning programs by outlining systematic yet practical procedures for improvement. The *Operation Guidance* process encourages administrators, teachers, parents, and students to participate in defining local career development needs, restructuring priorities, and developing ways to help students. The systems approach enables a school to organize resources, career planning information, and strategies into a manageable efficient structure.

The *Operation Guidance* product includes: (1) Guides detailing procedures for staff organization, collecting data, deriving career development goals, formulating behavioral objectives, creating career development units, and evaluating the career planning programs; (2) survey questionnaires and other evaluative instruments; (3) manuals that provide information and background for performing technical tasks; and (4) supporting references (e.g., a handbook of career guidance methods). The materials are written so that a school may progress according to the amount of time and personnel it has available for *Operation Guidance*. Much of the process, initially, involves careful planning. Tangible results usually occur during the first school year of participation.

Operation Guidance is more than a package of instructions. It is a formula for joining people into a productive, effective force for the school. Community review and advice are gained through an advisory committee. The product is compatible with existing high school career development programs. Rather than ignoring current efforts, the project provides a framework for making existing programs more effective, as well as creating additional services.

SUBJECT AREA(S)

Teacher and counselor training, administrative systems, curriculum, and student career development skills are gross areas of product concern. Since the product is intended to enable a subpopulation of the school to upgrade career development skills of students, there is potential for implementation of student learning activities into any subject area. The potential exists for the product to act as a coordinating mechanism for all career education activities.

INTENDED USERS AND BENEFICIARIES

A subpopulation of the comprehensive senior high schools, which could include teachers, counselors, administrators, and students, deals with the management and/or the execution of the various tasks that constitute the product. Senior high school students of all abilities should benefit when the product is used as intended to upgrade the schools' career planning program.

Although primarily designed for a comprehensive senior high school (approximately 200 students per grade level), the product appears to be adaptable to smaller schools based on observations of the first 5 months of a national field test. There is not, however, sufficient field test data to rate the success of the product in the smaller school. The developers feel the product could be modified for use at levels both above and below the senior high school.

GOAL(S) OR PURPOSE(S)

Operation Guidance is intended to enable the instrumental population: (1) To identify student needs for career development; (2) to derive program goals from statements of student needs; (3) to derive behaviorally stated objectives from the program goals; (4) to implement guidance or instructional methods that will enable students to achieve the selected objectives; and (5) to install a subsystem for collecting, analyzing, and reporting evaluative information on student achievement of behavioral objectives, changes in the resources available for supporting career development activities, and changes in student needs. If outcomes one through five are realized, the resulting career development program should have the following characteristics: (6) Increased use of inschool resources if previously underutilized, (7) increased use of community resources if previously underutilized, and (8) career guidance services and related instructional activities that are efficiently supported by available resources and are optimally responsive to student needs.

PATTERNS OF USE

Operation Guidance is constructed in a detailed, semiprogramed instructional format. It assumes a minimal skill level among school personnel in terms of project management, systems planning, data collection, data interpretation, program development, and program evaluation. It is, however, flexible enough to permit a school that has an existing program to adapt the product to its own needs. The product is self-contained and is intended for use by the school without reliance on outside consultants. (Current field testing indicates some schools need a small amount of technical assistance.)

Operation Guidance details procedures for organizing faculty, students, and members of the community to accomplish program development tasks. These tasks are: (1) Identifying needs and resources; (2) stating, ranking, and selecting program goals; (3) deriving behavioral objectives; (4) selecting career development methods; (5) planning and implementing career development units; and (6) evaluating the effectiveness and efficiency of the program.

Survey questionnaires are administered to students to determine their career development needs. More general questionnaires are also completed by parents, faculty, and graduates of the school who identify the type of career development areas that the high school should emphasize. The survey questionnaires enable the school to identify the strengths and weaknesses of its career planning program and the needs of its students.

Information about the school and community that might be of value to the career development program is collected. Identified needs are translated into goal statements. These goals describe general skills, information, and attitudes students need to choose and achieve a career. Goals are based on information collected in the surveys, State and local educational requirements, career development activities already going on in the school, and additional data the school may have collected. Career development activities will be designed for students to help them achieve these goals. Because sufficient resources may not be available to support learning activities for all of the goals immediately, the goals are ranked in order of importance. Usually goals of greater importance are selected before those of lesser importance, if there are resources to support them.

An advisory committee reviews the goals, the priorities assigned to them, and the selection of goals for implementation. Recommendations may be made to improve the goals. The principal reviews and, if appropriate, approves the goals, assigned priorities, and selected goals for implementation. A coordinator is chosen to oversee the development and implementation of activities for each goal that has been selected. With the assistance of two persons skilled in writing behavioral objectives, each coordinator writes the criterion objectives for each goal to be implemented. These objectives state what behavior students are expected to exhibit after participating in the career development activities designed for the goal.

Although behavioral objectives define what students are to achieve, schools have to choose ways for the objectives to be achieved. There are usually many ways to achieve each objective. The task is to choose instructional methods that are appropriate to the groups of students participating in the career development activities. In addition, the methods chosen should use a school's resources efficiently.

All goal-related information is collected into a formal plan for a career development unit or units (CDU's). A CDU is a learning unit that attempts to achieve one goal or a logical set of career development goals that have been selected. The plan developed for a CDU identifies the behavioral objectives that have been written for each goal, the instructional methods and resources that will be used for each objective, and the manner in which a CDU will be installed into the curriculum. This career development plan is subject to the principal's final approval.

ASSESSMENT PROVISIONS

Three levels of evaluation take place in the *Operation Guidance* system. First, at the completion of each career development unit, students participating in the activities evaluate the usefulness of the information presented for each behavioral objective and the effectiveness of the methods used to communicate this information. The person in charge of the CDU evaluates the extent to which each behavioral objective of the unit was achieved by the students involved. The information can be very helpful in indicating revisions that might be made to increase the effectiveness of the CDU. Second, an annual review of all career development units that have taken place during the year is conducted by the steering committee. A CDU could be expanded to involve more students in the career development activities, or changes might be made in the way resources are allocated. The third level of evaluation is called recycling. It is designed to make certain that the career development program continues to meet students' needs. The career development needs of students may change over time. Therefore, every 2 years the surveys are again administered. Several adjustments in the career development program could result, e.g., the priorities assigned to goals could be changed, the list of behavioral objectives for a given goal could be revised, a CDU could be expanded or eliminated.

TIME REQUIREMENTS

Normally, a school can generate career development units during the first year with *Operation Guidance*. A school may use the product on a continuing basis as a means of monitoring, evaluating, and, if necessary, upgrading career guidance services to students.

IMPLEMENTATION PROCEDURES

To undertake the *Operation Guidance* project, the school administration should be prepared to commit at least a half-time person to coordinating the project for each school. Approximately 1-1/2 hours per week per school year should be allowed for each of the five to seven permanent steering committee members.

Field work indicates the product probably will not work well in high schools that lack clear and continued administrative support for the project, do not have flexibility to effect change, and/or have a generally unstable environment (e.g., strikes and low morale).

Personnel Required for Adoption and Implementation

The appropriate number of positions and the estimated time commitment that incumbents in the positions would need to spend during each year of the project are as follows: (1) 5 to 7 steering committee members (3 to 5 faculty/staff members and 2 students) at an average of 1-1/2 hours per week, (2) a school coordinator at an average of 50 percent time, and (3) 40 task force members (16 to 20 faculty/staff members and 18 to 20 student members) at an average of 2 hours per week for 8 to 10 weeks.

An individual may occupy more than one position. Also, total number of people could be scaled downwards if the number of students in the school is fewer than 600.

ASSURANCES AND CLAIMS

Assurances of Harmlessness

The product necessitates personal interactions among teachers, counselors, students, and administrators. Also, there is interaction with the community. Every precaution has been taken to minimize the risk that these interactions may incur. Procedures have been written at every point to prevent negative consequences of interactions. In addition, the entire product has received the approval of the center for vocational education's protection of human subjects committee, established in accordance with Health, Education and Welfare (HEW) and Ohio State University guidelines (most recent approval was January 20, 1975). All data generated by the product received Office of Management and Budget clearance on September 12, 1974 (No. 51-R1080). Finally, the potential for benefit from such interactions is quite evident.

Assurances of Social Fairness

An important principle of the product is that career development assistance be made available to all students in the high school. This principle provides the basis for assurances of social fairness and no social biases in the following ways. The product orients itself neither toward vocational education nor college preparation, but rather emphasizes a broad set of career development skills useful to all students. The product calls for the analysis of some needs assessment information by sex and ethnic group, in case a particular subgroup needs special career guidance techniques. The product includes a checklist for reviewing existing career development materials, on which there is a question about the characteristics of previous student users.

Assurances of Replicability or Transportability

Assurance of transportability can be made as a result of the product field test, where developer control has been minimized. The developer trained 1 State-level person and 1 person from each school's staff once at the onset of product use (12 States and 42 schools are in the field test). The developer has dealt primarily with the State person, who has monitored and consulted with the school people. To date, schools have been able to use the product successfully under these conditions. Two qualifications need to be made to this assurance: (1) Occasional external assistance may be required, depending on the general competency of school personnel once they have decided to use the product and (2) training of one person within the school is required before use of the product, to the extent that the person be well-rounded in all aspects of the product.

COMMUNICATION AND YOU

A teacher guide to allow intermediate students to discover the complexities of communication

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

It consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in a guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary activities.

Intermediate level students, in decoding each other's messages and discussing their attitudes and feelings, discover the complexities of communication. They practice communication skills in role-playing situations and develop adjustment skills needed when interpersonal differences must be resolved.

SUBJECT AREA(S)

The subject area for which the materials in this guide have potential is language.

The topics covered in *Communication and You* are: Communication symbols; language—a communication tool; the communication process—elements and types; successful communication; forming, identifying, and changing attitudes; the interdependency of persons; adjustment skills; coping with different viewpoints; and identifying interrelationships.

INTENDED USERS AND BENEFICIARIES

The materials in *Communication and You* were developed for students in grade 7.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff-development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and open classrooms.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in *Communication and You* will: (1) Understand that language is a system of symbols used to represent ideas as a means of acquiring communication skills; (2) explore the nature of language as an effective method of conveying ideas in order to develop an awareness of communication skills; (3) identify the basic elements of communication and explore various methods of communicating in order to develop communication skills; (4) develop an awareness of the importance of successful communication and the factors that can interfere with it in order to recognize the necessity for a variety of communication skills; (5) explore the concept of "attitude" and recognize how attitudes are formed and changed as a means of developing an awareness of the variety of attitudes one displays; (6) recognize how attitudes and the way they are communicated affect both interpersonal relationships and group processes as a means of identifying how attitudes can be interpreted; (7) recognize that each individual is unique and appreciate the worth of different value systems as a means of understanding that interpersonal relationships can be formed among people with basic differences; and (8) appreciate the rights and responsibilities of others, recognizing that each individual has a function in the group and that others rely upon the individual to complete an accepted task or job as a means of understanding the interlocking structure of roles in society and how the complex of interlocking roles contributes to the student's way of life.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others, or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. Where concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally, the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. Information concerning the field tests of the original materials is available from the developer.

After field testing by students, teachers, and professional staffs, the original products were revised and/or rewritten to reflect field test data. This effort included a review of sex and racial biases in the materials. Consequently, the materials appear to display no social bias; they may be adapted to special needs and interests of students; they are transportable; and they are based on both practical and theoretical considerations.

JUST ME

A teacher guide for helping 1st-grade students realize that individuals are unique

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide was developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guide is career awareness and exploration.

The guide consists of sets of student learning experiences that focus on various elements of career education or beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary activities.

The idea that being a self involves being different is the unique focus of *Just Me*, which was designed for use at the early primary level. Students note in their booklets their unique aspects as influenced by physical characteristics, family, friends, and interests. Using the familiar environment of the school, students assess capability of self in relation to a variety of assigned classroom tasks and tools.

SUBJECT AREA(S)

The materials in *Just Me* apply to the communication arts such as English, speech, and language. The topics covered include: "Who I Am," "My Body," "My Characteristics," "How My Body Functions," "My Senses," "My Family and Me," "My Family Duties," "My Promise Book," "My Friends and Me," "Things I Do," "How I Perform Tasks," and "How I Use Tools."

INTENDED USERS AND BENEFICIARIES

The materials in *Just Me* were developed for students in grade 1. Potential users of career education teacher's guides are teachers in grades K - 12. Other possible users are teacher educators in colleges and universities, staff-development personnel in schools, and personnel in State departments of education.

The learning experiences are adaptable to multigrade groupings and the open classroom.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in *Just Me* will: (1) Recognize that they possess characteristics which are unique and distinguishable from other human beings; (2) examine their own facial characteristics, exterior body parts, functions of these parts of the body, and five senses in order to develop awareness of the body as a unique self; (3) develop the ability to communicate the relationship between self and family as a means of becoming more fully aware of that relationship; (4) realize that once a task or job is accepted, there are certain responsibilities to self and others as a means of recognizing the importance of behaving responsibly, fulfilling promises, and contributing to the family; (5) realize that going to school helps them learn to do things for self and others; and (6) understand the relationship between the availability of tools and the performance of a learning task and become aware of their ability to use instruments (tools) to perform learning tasks.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. INSTRUCTIONAL HANDBOOK: COPING IN THE WORLD OF WORK: PRACTICE IN PROBLEM SOLVING (CPSS) (A PRODUCT OF CPSS, THE CAREER PLANNING SUPPORT SYSTEM)

An instructional unit designed to ease the transition of 11th- and 12th-grade students from school to work

This instructional unit, *Coping in the World of Work: Practice in Problem Solving*, has been designed to meet the deficit in viable techniques available to help students acquire coping skills that will facilitate their transition from school to work. The unit is designed: (1) to acquaint students with the range of work entry and job adjustment problems they will encounter in making the transition from school to work, (2) to familiarize students with the five-step problem-solving process, (3) to apply the problem-solving process to real-life simulated practice problems, and (4) to apply the problem-solving process to real problems outside the classroom. The unit is evolved from specific behavioral objectives and involves each student in a variety of structured group experiences such as role playing, sociodramas, brainstorming exercises—to aid them in discovering their own, individual courses of action in solving simulated problems.

The five-step problem-solving process involves: (1) Diagnosing the problem, (2) generating alternative solutions, (3) evaluating the solutions, (4) choosing a solution, and (5) validating (testing) the solution.

Included with the unit are a self-instructional manual for the instructor, student guides, filmstrips, transparencies, and all handout materials. The unit is designed for 11th- and 12th-grade students.

SUBJECT AREA(S)

Since the unit addresses a heretofore unattended area, it may best be explained by listing the titles and page lengths of the manual. Each of the five steps in the five-step problem-solving process has been further broken down into more easily assimilated parts. The following list is current as of the date of this entry but may be altered during the final revision process.

Introduction
- I. Foreword (3 pages)
- II. Student Behavioral Objectives (2 pages)
- III. Student Orientation to the Unit (7 pages)
- IV. Discussion Questions (1 page)
- V. Outline of the Five-Step Problem-Solving Process (1 page)

Content and Process
- VI. Step I-A—Work Entry and Job Adjustment Problems (19 pages)
- VII. Step I-B—Value of Early Detection and Proper Diagnosis (15 pages)
- VIII. Step I-C—Causes and Symptoms (24 pages)
- IX. Step I-D—Information Sources for Problem Identification (30 pages)
- X. Step I-E—Problem Writing (10 pages)
- XI. Step II—Generating Solutions (15 pages)
- XII. Steps III and IV—Evaluating the Choosing Solutions (40 pages)
- XIII. Step V-A—Validating Solutions (33 pages)
- XIV. Step V-B—Practice in Problem Solving (18 pages)

INTENDED USERS AND BENEFICIARIES

The principal beneficiaries of this product will be 11th- and 12th-grade high school students. The instructors involved may be teachers, counselors, administrators, paraprofessionals, parents, and others connected with high school students. This is easily accomplished through the use of the instructor's manual, which is self-instructional in nature. Schools that will use the unit are all high schools—general, vocational, and comprehensive. Although the product is chiefly designed to answer the needs of 11th- and 12th-grade students, with modifications the range of potential beneficiaries could include 9th- and 10th-graders, college students (both community and 4-year institutions), postsecondary technical/vocational schools, community and State-level training centers, and correctional/penal institutions.

GOAL(S) OR PURPOSE(S)

At the conclusion of this unit, students will be able: (1) To list and briefly describe 10-15 problems commonly encountered in the transition from school to work; (2) to detect situations or events in an exercise that define potential and/or fully developed job adjustment problems; (3) to identify and distinguish between causes and symptoms in a job adjustment problem; (4) to identify information sources, and rank and rate their accessibility and value in a job adjustment problem; (5) to develop, from personal experience or imagination, a case study depicting a job adjustment problem which incorporates causes, symptoms, and information sources used in diagnosing the problem; (6) to list alternative solutions for a job adjustment problem and establish criteria for an optimum solution to a job adjustment problem; (7) to describe the information needed and list available sources of information necessary to implement a given solution to a job adjustment problem; (8) to rank their solutions in terms of the feasibility for implementation and usefulness for solving a job adjustment problem; (9) to choose a solution to a job adjustment problem and state reasons for selecting that solution which will include references to the feasibility and usefulness rankings of the solution; (10) to validate attempted solutions by comparing their results with previously established criteria; and (11) to recycle through the problem-solving process when it is determined that an attempted solution has failed.

PATTERNS OF USE

This instructional unit may be used with a variety of curricular areas such as English, any vocational education course, career education courses, or group guidance. It must be used sequentially. All materials are provided (excluding audiovisual devices) for 30 students. The package is completely reusable with spirit masters being provided for any consummable items.

ASSESSMENT PROVISIONS

There is no formal test provided, however, it is recommended that principally work-bound 11th- and 12th-grade students be considered in using this unit. In addition, written exercises based on behavioral objectives are provided throughout. These can be used as graded exercises by the instructor.

TIME REQUIREMENTS

The minimum time limits involved are 10 class periods of 45 minutes each. The unit may be easily expanded to 20 periods of the same length, with the materials included in the unit. Using recommended supplemental materials from other publishers, the unit can be developed into a 30-period course. It is recommended that the unit be used daily and not interrupted (except by holidays) until its completion. As noted earlier, the instructional unit is totally self-instructional for the instructor and requires approximately 10 hours of self-preparation.

IMPLEMENTATION PROCEDURES

There are no special equipment, facilities, services, or organizational requirements necessary to implement this unit. The unit comes with all necessary materials for 30 students and is reusable. All consummable items are printed on spirit masters so that those items can be duplicated as many times as necessary.

Summary Cost Information

The approximate cost of the unit per 30-student classroom will be $75-$100. One complete set of materials will be provided at this price, but additional replacements, e.g., student guides, instructor's manuals, can be purchased individually as the need arises.

Personnel Required for Product Adoption and Implementation

One instructor who can be a teacher, counselor, parent, paraprofessional, administrator, or other interested person is required. Ten hours of self-instruction are required, together with minimal skills in leading small discussion groups.

ASSURANCES AND CLAIMS

This product has been pilot tested at a local vocational school and has undergone formative product engineering testing at the same school a year after the pilot test. Undergoing revisions for the summative product engineering phase of testing involved a major decision event review and both internal and external consultants. The formative phase was accomplished with staff members used as observers only while the summative phase had no staff assistance except for the administration of the pretest and posttest. Clearly, the product is transportable. All student and instructor critique forms indicated positive feelings about the usefulness of the product, but most responses indicated that the unit was "too long and boring." As a result, the essential unit length is being reduced, while maintaining the integrity of the behavioral objectives.

The materials demonstrate no forms of sexual, racial, or general social biases, this fact being based on verbal and written reports by instructors, students, and consultants.

Additionally, no main or side effects that could be construed as producing harm were noted by any teacher or observer during the pilot test, formative product engineering phase, or summative product engineering phase of testing. Since no other strategy exists that addresses this problem and this group of users, there can be no common comparison alternatives.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Instructor's manual	1 per instructor	To be announced	Reusable	
Student guides	1 per student	To be announced	Reusable	
Filmstrips	2 per set	3.60 per set	Reusable	
Sound cassettes	2 per set	4.00 per set	Reusable	
Spirit masters of all consumable items (handouts, self-checks, etc.)	1 set	To be announced	Reusable

MYSELF AND OTHERS AT HOME AND SCHOOL

A teacher guide to encourage students in grades 1-3 to deal with an expanded idea of self

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

Within the context of family and school, students in primary grades are encouraged to deal with an expanded idea of self. This self becomes aware of its involvement in an institution called family and of the many different roles played by family members to achieve a variety of goals. Interdependency and responsibility are explored. These basic concepts are then applied to another familiar institution, the school. The concept of occupational roles is carefully developed.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are social studies and language arts.

The topics covered in this guide are: Family structure and activities performed in the home, interrelationships of family functions, interdependency and responsibility in the family, role performance in the home, family members and their jobs, living in a school, children in a school, school functions and occupational roles, and interdependency and responsibility in the school.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grades 1 - 3.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The student completing the learning sets in this guide will: (1) Explore how the structure of a family affects the way it functions; (2) demonstrate an awareness that family functions are interrelated and based on the principle of division of labor; (3) become aware that since family members are interdependent, they are responsible to one another; (4) recognize and describe characteristics of a role performance in the family; (5) become aware of the jobs that family members perform outside the family; (6) demonstrate knowledge of the school's physical structure as it relates to a variety of school members performing various school functions; (7) define student roles performed in school and identify relationships between the students' family roles and school roles; (8) gain information about occupational roles performed in the school and develop understanding of the ways in which occupational roles are similar to living patterns within the home; and (9) recognize that interdependency and mutual responsibility are necessary components of living together in a school community.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

RD 080 019

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. Information concerning the field tests of the original materials is available from the developer.

After field testing by students, teachers, and professional staffs, the original products were revised and/or rewritten to reflect field test data. This effort included a review of sex and racial biases in the materials. Consequently, the materials appear to display no social bias; they may be adapted to special needs and interests of students; they are transportable; and they are based on both practical and theoretical considerations.

SELF-APPRAISAL FOR DECISION MAKING AND CAREER PLANNING

A teacher guide intended to lead the secondary-level student to self awareness

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

The learning experiences in this teacher's guide are intended to lead the secondary-level student to self-awareness, particularly in relation to the student's interests, aptitudes, achievements, and values. Each student has the opportunity to explore processes of planning and the prerequisites for career decisions.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are: English, language arts, social studies, and communications.

The topics covered in this guide are: Personal interests and achievements; personal and societal values; understanding success; prerequisites for careers such as interests, abilities, and achievements; exploring the decisionmaking process; values, needs, and lifestyle; occupational costs, rewards, and characteristics; and job applications and interviews.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grades 9 - 12.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts. The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will: (1) Identify individual interests and achievements in order to understand their relationship to each other and to past experience; (2) identify personal and social values and consider them with respect to interests and abilities as a means of developing self-awareness and understanding of values; (3) examine factors which lead to or hinder success in order to develop the understanding and sensitivity to cope effectively with both success and failure; (4) analyze the interests and abilities of oneself and others in relation to achievements as a means of recognizing that each individual possesses a unique combination of interests and abilities; (5) develop skill in assessing oneself in relation to the environment as a means of setting reasonable and obtainable goals while realizing that goals may need to be modified in response to a changing environment; (6) become aware that personal values determine the standard of living which an individual may wish to attain and that the rewards of a job vary with the requirements and responsibilities of the job; (7) examine specific characteristics of occupations in order to make tentative decisions about long-range career possibilities and determine what is currently required to achieve them; and (8) simulate an employment interview in order to gain awareness of the importance of appearance, speaking ability, general self-confidence, and preparation for the interview.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

UNDERSTANDING SELF

A teacher guide to learning experiences for students in grades 8-10 to increase self-perception and career awareness

With the foundation provided by the *Comprehensive Career Education School Based Model,* this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K - 12. The theme of the guidebook is career awareness and exploration.

It consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in a guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary activities.

Self-perception is significant particularly to secondary students who are exploring occupations and experiencing decisionmaking. By examining factors that influence their feelings—including values, interests, abilities, and achievements—students form a composite of themselves. The composite may or may not be validated when students compare the composite with others' perceptions of themselves. Discussions about goals and leisure activities conclude students' indepth look at self and their review of decisionmaking skills.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are guidance, social studies, communications, and home economics.

The topics covered in *Understanding Self* are: Factors that influence feelings, understanding ourselves and others, exploring occupations, considering occupational goals, values and value systems, values and conflict situations, defining and setting goals, analyzing characteristics and self-assessment, and leisure time and self-understanding.

INTENDED USERS AND BENEFICIARIES

The materials in *Understanding Self* were developed for students in grades 8-10.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff-development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and open classrooms.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in *Understanding Self* will: (1) Identify typical reactions to situations as a means of developing an understanding of which factors influence one's feelings; (2) develop an awareness of one's individual characteristics as a means of acquiring a fuller understanding of self; (3) become aware of the concepts of personality and self-image as a means of improving understanding of oneself and others; (4) become familiar with potentially satisfying careers as a step toward finding an occupation that complements one's self-concept; (5) identify likes and dislikes related to occupational goals for the purpose of realizing that interests influence career satisfaction; (6) expand the concept of "value" to rank one's personal values and recognize that values are unique to each individual in order to develop further an understanding of self; (7) recognize that values and emotional responses are interrelated and that awareness of such interrelationships is useful in identifying problems and their possible solutions; (8) expand the concept of "goal," and recognize the types and purposes of goals and the influence they have on an individual in developing understanding of self; (9) become aware of personal characteristics in order to evaluate oneself in relation to one's goals; and (10) identify one's leisure activities and explore reasons for pursuing them in an effort to round out understanding of self.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others, or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. Where concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally, the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. YOUR PERSONALITY, YOUR HEALTH, YOUR JOB

A teacher guide to learning experiences for students (grades 8-11) that focus on various elements of career education

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K - 12. The theme of the guidebook is career awareness and exploration.

It consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in a guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary activities.

Although some of the guides deal indirectly with topics such as communication and factors influencing behavior, this guide amplifies these topics for secondary students. In addition, the student is encouraged to develop a thoughtful approach to setting meaningful standards (for personal hygiene, nutrition, and diet) and maintaining physical fitness in work. Two other topics considered in greater detail are work satisfaction and rights and responsibilities.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are health, communications, and guidance.

The topics covered in *Your Personality, Your Health, Your Job* are: Nonverbal communication, personal hygiene, nutrition and diet, physical fitness and work, self-satisfaction and work satisfaction, and rights and responsibilities.

INTENDED USERS AND BENEFICIARIES

The materials in *Your Personality, Your Health, Your Job* were developed for students in grades 8 - 11.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff-development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and open classrooms.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in *Your Personality, Your Health, Your Job* will: (1) Become familiar with nonverbal communication and its role in relationships with others as a means of increasing self-awareness; (2) describe and discuss the major influences in one's own life as a means of demonstrating recognition of those influences and appreciation for their important role in the process of "becoming"; (3) examine personal hygiene advertisements and discuss the importance of personal hygiene to the individual as a means of cultivating objectivity toward commercial influences on us and developing personally relevant standards of hygiene; (4) compare typical and recommended teenage diets in order to develop awareness of the need for food that contributes to a nutritional diet; (5) analyze the role of physical fitness in occupational success and identify habits that promote physical fitness; (6) analyze an occupation in terms of its demands, rewards, and satisfactions as a means of developing understanding of the importance of self-satisfaction and work satisfaction in attaining a rewarding lifestyle; and (7) discuss rights and responsibilities of the worker, especially in relation to work satisfaction and self-satisfaction, in order to become better acquainted with their benefits to the worker and to society.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others, or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. Where concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally, the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. SELF-DIRECTED CAREER PROGRAM (SDC)

A vocational guidance system designed to provide effective, theoretically based guidance at a low cost

The *Self-Directed Career Program* (SDC) is a vocational guidance system designed to provide effective, theoretically based guidance at a low cost with a minimum expenditure of counselor time. SDC consists of the following materials for students: (1) Instruction sheet, which explains the program and tells a student how to proceed; (2) SDS assessment booklet, which provides a vocational guidance experience that a student undergoes individually for about 1 hour; (3) occupations finder, which lists a total of 456 occupations that are coded according to the theoretical system used in the SDS; (4) checklist, which helps a student check the accuracy and validity of the SDS experience; and (5) occupational outlook handbook, which provides comprehensive descriptions of jobs and careers.

The above describes the basic SDC program. The program manual contains instructions and suggestions to supplement and integrate the program with other materials—Krumboltz experience kits, *Career Planning Manual* (Cosgrave and Dick), *Deciding* (CEEDB), and SRA occupational briefs. The manual also contains instructions for organizing counseling materials using the theory upon which the SDC program is based.

The program requires that one counselor be available for consultation with those students or adults who desire further guidance after undergoing the SDC experience.

SUBJECT AREA(S)

The SDC program is applicable to career guidance.

INTENDED USERS AND BENEFICIARIES

Counselors and guidance personnel in junior and senior high schools and colleges can serve as "managers" of the SDC. The ultimate beneficiaries of the SDC are the students in junior and senior high schools and colleges. The reading grade level of the SDC, the interest inventory incorporated in the SDC, is 7th-grade reading level.

GOAL(S) OR PURPOSE(S)

There are not enough counselors to provide vocational guidance for everyone, and it is unlikely that sufficient funds for this traditional form of help will ever be available. Counselors need a vocational guidance system that will multiply their time and talent so that a single counselor can cope with a large population of students or adults. The extension of vocational help to all who need it must be accomplished at the lowest possible cost in materials, equipment, and training time. And, equally important, any new system should possess a high degree of scientific validity and client effectiveness. These are the goals of the SDC program.

PATTERNS OF USE

The student materials should be arranged on a table or desk in the order listed in the narrative description. Depending on need, opportunity, and financial resources, one or more layouts could be located in appropriate places (e.g., counseling offices, libraries, student study rooms). A sign should identify the system and invite students to use it. Also, a sign-in sheet may be included so that the number of students using the materials can be recorded and the system monitored and evaluated.

The student's first step is to pick up an instruction sheet. After reading the instructions, the student proceeds as follows:

Step 1—Takes a copy of the SDC and a copy of the occupations finder. The student reads the instructions on the outside cover of SDC and then begins the guidance experience by filling out the occupational daydreams section. The student works through the booklet and computes the summary code. This code identifies the characteristics that distinguish interests, competencies, experience, and self-concept. Proceeding, the student is instructed to search the occupations finder to see which occupations match the summary code. These are the occupations that are best suited to the student's particular characteristics. A list is made of these occupations.

Step 2—The student then takes a copy of the sheet entitled "Making the SDS Work for You." Using this sheet, the student rechecks the work in the assessment booklet, is reminded to search the occupations finder for all permutations of the summary code, and is reminded that the list of occupations should number at least five. The student is then instructed to compare the summary code to the code of the occupational choice that was initially made in the assessment booklet. If the summary and choice codes match exactly or are reasonably convergent, the student proceeds to the next step. If the codes are very divergent, the student is instructed to see a counselor.

Step 3—The students whose codes are convergent, move to the next step. They look up the occupations they have listed in the *Occupational Outlook Handbook*. The handbook gives them relevant information about the occupations, including a job description, how much training is required, and so forth.

ASSESSMENT PROVISIONS

The SDC manual includes, as appendix B, a series of evaluation strategies for determining the effects of the SDC program on students.

The evaluation activities are grouped into three levels, according to the research sophistication. Level I consists of easily collected indications of popularity of the SDC and satisfaction with it. Level II involves somewhat more difficult-to-collect measures of the quality of assistance offered by the SDC to the students and counselors. Finally, level III suggests research plans for testing constructs of the theory upon which the SDC is based. The three levels are suggested to assist in planning evaluations in accordance with local resources: Personnel time, training, and funds.

TIME REQUIREMENTS

The SDC program requires approximately 2 hours to be completed by a student.

IMPLEMENTATION PROCEDURES

The student materials should be arranged on a table or desk in the order listed in the narrative description. Depending on need, opportunity, and financial resources, one or more layouts could be located in appropriate places (e.g., counseling offices, libraries, student study rooms). A sign should identify the system and invite students to use it.

Summary Cost Information

The SDC consists of printed instruction sheets ($0.05 each, maximum), SDS assessment booklet and occupations finder ($0.65 each, bulk order), SDS checklist sheets ($0.05 each, maximum), and a supply of *Occupational Outlook Handbooks* (only one required—$6.25 each). The system also requires a homemade sign identifying the program for the students. Because the program is self-directed and student-scored, no scoring or computer services are involved. The counselor should have an SDS manual ($3), DOT volume and supplements (most counselors have these). As an example of total estimated costs, providing every student in a 500-member junior class with vocational guidance under the SDC program would cost a total of $359, or about $0.07 a student. This estimate does not include the cost of counselor time, nor does it attempt to compute the savings in counselor time as compared to other guidance systems.

Personnel Required for Product Adoption and Implementation

The SDC program is designed to be managed by one counselor.

ASSURANCES AND CLAIMS

Assurances of Harmlessness

The SDC program includes a student checklist to assure that the student uses the SDS correctly and to refer students who have difficulty to their counselor.

Assurances of Social Fairness

The SDC program does not perpetuate racism, sexism, or other biases. There is no differential treatment of students by race, sex, or other category. Numerous studies of the inventory used in the SDC program have provided an empirical basis for proclaiming the instrument to be sex-fair.

Assurances of Replicability or Transportability

The SDC program has been used in a girls' high school in Baltimore, with the manager of the system being alone in its application. The manager and the students reported the program to be successful. The SDS, used in the SDC program, has been used with over 300,000 students. Approximately 6,000 copies of the SDC manual have been distributed, on request, to counseling personnel.

Claims of Effectiveness

The installation of the SDC program in Seton High School in Baltimore, Maryland, was well-received by the students and helpful to them. Sister Marie Yetter, who managed the program, found that the program helped to provide more guidance to more students.

The effectiveness of the SDS (the inventory used in the SDC program) has been documented through research studies that show that the SDS increases the number of occupations being considered and increases satisfaction and certainty about vocational plans. A recent study found that the SDS provided, by itself, career guidance equally effective to that given by trained counselors. Numerous validity and reliability studies support the effectiveness of the SDS as a career guidance instrument.

Another measure of the SDS' effectiveness is the widespread use of the instrument: In 1973, the SDS was used by approximately 200,000 individuals; in 1974, it was used by approximately 300,000.

MATERIALS AND EQUIPMENT

CAREER COUNSELING IN COMMUNITY COLLEGES

A product that allows counselors to train themselves to reuse effective career counseling techniques

This product was designed for counselors who help adolescents and young adults in their career development. Thirteen distinct, replicable procedures are presented for helping people make and implement career plans. Covered are such career tasks as choosing, problem solving, building esteem, and managing one's time. The counseling procedures are described in detail so that counselors can apply them in a replicable manner to their own clients. Replication enables one to improve counseling and establish accountability. The author describes one approach for achieving replicability and shows how to employ the 13 procedures so that they can be replicated. Methods of measuring career development and research pertinent to the 13 procedures are also discussed to help the counselor in selecting between procedures and in evaluating the use of these procedures.

The unique aspects of this product are that counselors can train themselves to reuse career-counseling techniques that have been demonstrably effective. This is a breakthrough for counselors who heretofore have had to create new processes for each client because they had no step-by-step procedure for recycling information about successful counseling sessions. The product stimulates the counselor to test new counseling methods and provides some of the tools needed for evaluating their effectiveness.

SUBJECT AREA(S)

The product is comprised of five chapters; the titles and page lengths of these chapters are as follows:

1. Replicable Counseling and Its Implications (9 pages)
2. Counseling Procedures to Aid in Career Choice (26 pages)
3. Counseling Procedures for Resolving Deficits in Vocational Development (28 pages)
4. Overview of Thirteen Replicable Career Counseling Procedures (7 pages)
5. Methods of Evaluating Career Development (14 pages)
6. Appendixes (42 pages)

INTENDED USERS AND BENEFICIARIES

Although designed particularly for use by counselors of 2-year college students, this product is equally appropriate for counselors working with adolescents and young adults in other settings such as secondary schools or noninstitutional youth-oriented agencies.

The beneficiaries are the students who will be helped to make intelligent choices based on knowledge of career requirements in relation to their own strengths.

GOAL(S) OR PURPOSE(S)

The purposes of this product are to help counselors: (1) To broaden their knowledge of effective counseling techniques, (2) to select those procedures that are most appropriate to their circumstances, (3) to replicate those procedures with their own clients, and (4) to evaluate their use of the procedures.

PATTERNS OF USE

This product can be used independently by practicing counselors for their own professional development or can be incorporated into a preservice or inservice counselor-training program.

ASSESSMENT PROVISIONS

No provisions are made for screening users or evaluating the results of using this product.

TIME REQUIREMENTS

No time requirements are suggested in connection with the use of this product.

IMPLEMENTATION PROCEDURES

The product plans are implemented by counselors who train themselves by reading the material. They use the product as a training manual and also have it as a ready reference. The product was developed for use by counselors and no specific materials, equipment, or personnel are required for its use other than those used in typical college-counseling situations.

ASSURANCES AND CLAIMS

The counseling models included in this product were selected specifically for their replicability, and neither the developer nor the publisher has received reports that the models cannot be replicated.

The materials do not appear to display any form of social bias including ethnic or sexual stereotyping (except for occasional use of the generic "he"). This assurance is based on an examination of the product itself.

No evidence is available that would indicate that any of the counseling procedures presented, when used as specified, would result in harm—physically, psychologically, or otherwise—to those counseled.

CAREER GUIDANCE RESOURCE CENTER

A guide for those who wish to implement the research center concept in career education

This monograph has been prepared as a guide for practicing counselors, teachers, and administrators who wish to implement the resource center concept in their local school district or setting. It is also useful as a supplementary source in counselor education courses dealing with the organization and dissemination of career information. The monograph was developed on the belief that the career guidance resource center is the vehicle having the greatest potential for improving significantly the delivery of career information to those persons who need these services.

SUBJECT AREA(S)

Subject areas include major functions of the career resource center; settings in which the career resource center can be used; and how to develop and establish a career resource center, including basic layout considerations, equipment, location, materials, staffing, and procedures for evaluation.

INTENDED USERS AND BENEFICIARIES

This monograph is intended for staff counselors participating in a career education program; directors of career education or career guidance programs; counselor and vocational educators; as well as graduate students preparing in the areas of vocational education, career education, and guidance and counseling.

GOAL(S) OR PURPOSE(S)

The goal of this monograph is to serve as a handbook for the development and design of career resource centers by providing specific information relating to the development of such centers.

MATERIALS AND EQUIPMENT

The price of this product has not yet been determined.

ASSURANCES AND CLAIMS

This document will not perpetuate sexism, racism, or other biases such as those related to religion, age, or socioeconomic stereotypes.

THE COMPUTER AND GUIDANCE IN THE UNITED STATES: PAST, PRESENT, AND A POSSIBLE FUTURE

Five available computer guidance systems

Five currently available computer guidance systems are described. The design of a new state-of-the-art computer guidance system is reported. A context is offered for classifying these systems and judging what to expect from each.

SUBJECT AREA(S)

Career guidance, computers in career guidance, and choice and decision processes in career constructionism are the subject areas.

INTENDED USERS AND BENEFICIARIES

The intended users of this product are designers of computer-involved guidance systems in career education and persons considering using an available computer-involved guidance system.

GOAL(S) OR PURPOSE(S)

The purposes of this program are to provide a current statement of the art of computer guidance systems and to specify a context for setting expectations as to outcomes of computer guidance systems.

ASSURANCES AND CLAIMS

Prior to publication, the manuscript was submitted to the Symposium on Computer-Based Counseling, 18th Congress, International Association of Applied Psychology, for critical review and determination of professional competence. This publication has met such standards.

LIFE CAREER PLANS: REVIEWING AND RENEWING

A plan for helping adults review and perhaps change career plans

This publication will provide a plan and procedures for helping individuals 18 years and older to review and renew their life career plans and consider, where appropriate, ways and means to implement midlife career switches. There is much discussion and expression of a need for resources in this area, but little, if any, regarding concrete approaches and procedures. This publication would provide counselors and other social professionals with the "know-how" to establish programs and would provide services for the many persons who need and are requesting assistance, but are unable to find people and services that can be helpful to them.

SUBJECT AREA(S)

Attention in this manuscript will be given to several populations: Women, early retirees, veterans, and those contemplating career change at any age. A major share of the publication will be devoted to the concerns and needs of women from several perspectives—those who have never worked but would like to; those who have been out of the labor market for some time but wish to return to work; blue-collar workers who may wish to change their status and upgrade their positions but do not know how; and women, perhaps feeling that their skills are underutilized, who are dissatisfied with their present working situations.

A COMPREHENSIVE VIEW OF CAREER DEVELOPMENT

Actual programs and practices in career guidance that clarify goals and objectives

This monograph is the outcome of a workshop sponsored jointly by the American Personnel and Guidance Association, *Impact Magazine*, and the ERIC/CAPS center. Each paper was originally presented at the conference in Ann Arbor, Michigan, in June 1973, and was subsequently revised by the author, incorporating suggestions received after the presentation.

Each paper speaks to a significant facet of emerging theory and practice in life career development. This monograph is intended to answer many questions regarding the "how" of life career development and to stimulate readers to assess carefully their own philosophy concerning the basic goals and objectives of life career development.

SUBJECT AREA(S)

Subject areas include career development under social and economic change, guidance-based models for career education programs, career guidance and women, guidance and technology, and assessment of career guidance outcomes.

INTENDED USERS AND BENEFICIARIES

This monograph is intended for counselors, counselor educators, directors of counseling programs, teachers, curriculum specialists, administrators, and other professionals involved with career guidance and career education.

GOAL(S) OR PURPOSE(S)

The goals are to acquaint the readers with actual programs and practices in career guidance (and the rationale behind them) to serve as a guide for clarifying goals and objectives and for evaluating outcomes in the development of new programs established by users of the monograph.

MATERIALS AND EQUIPMENT

Copies of this document cost $5 for APGA members and $6 for nonmembers.

ASSURANCES AND CLAIMS

A Comprehensive View of Career Development does not perpetuate sexism, racism, or other biases, e.g., those related to religion, age, or socioeconomic stereotyping.

AGE-INCOME GRAPHS BY SEX FOR 336 OCCUPATIONS

A set of graphs which forces students to consider income over the lifespan rather than just the entering salary

When considering their future occupations, students generally assume that the longer they work, the more they will earn. In addition to assuming a direct, upward relationship for all occupations, they also focus on the entry income when considering different occupations. All considerations of income are really abstract thoughts, and a few cents-an-hour variation between jobs can be magnified out of proportion to the real difference.

This booklet presents graphs of the relations between age and average yearly income for each sex for 336 occupations. These curves are based on data taken from the 1970 Census of the United States. The incomes are for 1969, the last full year before the census was taken.

Students using these visual income curves for the first time are forced to consider income over the lifespan. The assumption that income increases in all jobs with years of experience is quickly refuted. Comparisons are readily made between incomes in various jobs over the lifespan and between incomes of males and females in the same occupations.

When there are fewer than 25 people in a particular age group (based on a 6-in-100 random sample of the 1970 census), no data were reported. When 5 or more consecutive age groups had fewer than 25 persons, the whole curve was dropped. These gaps and missing curves should serve to make students aware of occupations which have been "closed" to members of a particular sex and also cause students to question the relative absence of particular age groups in certain occupations.

These are only a few of the purposes for which these income curves can be used. Counselors and teachers should find that these materials will provide students an excellent stimulus for exploring the income dimension of occupations.

SUBJECT AREA(S)

Guidance and counseling are the subject areas.

INTENDED USERS AND BENEFICIARIES

Teachers, students, and counselors considering income factors in occupational choice are the intended users.

GOAL(S) OR PURPOSE(S)

The goal is to increase rationality of occupational choice to the extent that choice is based on income factors.

PATTERNS OF USE

The document is intended as a reference and sourcebook for counselors. Graphs are organized into 336 separate pages indexed by occupational category, alphabet, and selected occupational titles; they can be used at all levels of education focusing on jobs and careers.

ASSESSMENT PROVISIONS

The document contains appropriate precautionary instructions for interpretation.

TIME REQUIREMENTS

There is no specified time requirement.

IMPLEMENTATION PROCEDURES

The document may be reproduced and circulated. Duplication can be done by photo-offset or an office copier.

Each counselor should have one copy of *Age-Income Graphs by Sex for 336 Occupations*.

ASSURANCES AND CLAIMS

The income data used in the preparation of these graphs came from 1969. As such, it may not represent the true picture of 1975 earnings, which have risen due to inflation. Inflation will affect only the elevation of the graph to reflect greater earnings in all jobs across the board. Inflation should not change the slope of the graphs; for instance, it should not lead to differential increases in salary either as a function of occupation or age. The user is cautioned that an occupation which paid $10,000 in 1969 is probably paying at least $12,000 today, and the graphs must be interpreted with the caution that while the salaries are lower than those today, the 1969-based differences between occupations, sex, and increase in income with experience remain valid.

Other precautions for the user are:

1. These census data are for people of different ages, not for the same person at different times in the individual's life.

2. The income of workers in a given job changes from year to year. These graphs are for 1 year only.

3. In a given occupation, wages differ to some extent from place to place. These graphs give the average for the whole country. It should be noted, however, that when wages differ by place generally, so does the cost of living. Thus the graphs probably provide a good relative indication of the purchasing power of income regardless of location.

4. The shape of the curve and the relative differences in income between occupations probably will not change much over the next 20 or 30 years.

5. These curves tell what kinds of variations exist between average yearly incomes of different occupations according to the age and sex (not race) of the people in each occupation.

6. The large income differences between men and women partly stem from the fact that women often hold part-time or temporary jobs.

7. The numbers on the graphs are the same as those used by the 1970 U.S. Census. Not all census occupations were included in the document, and the census did not use all the numbers from 0001 to 1000; many numbers are skipped in the document (number listed: 336).

Technically the data were taken from the six 1-in-100 samples of the U.S. Census. Parts of the curves were edited when there were fewer than 25 cases in an age-sex category of an occupation. Whole curves (of men or women or both) were left out when (1) there were fewer than five contiguous age categories of at least 25 cases per category or (2) when the occupational title given by the census would not be meaningful to users. (Most of these were residual categories.) The objective of the deletions was to provide only those graphs which would be easy to understand.

THE CAREER DATA BOOK (INCLUDING "STUDENT'S BOOKLET")

A resource book which provides detailed information about career plans of persons 5 years out of high school

The Career Data Book is a 400-page resource book for counselors that provides detailed descriptions of the interests, acquired information, abilities, and background characteristics of 108,000 high school students who, five years after high school, planned careers in any of 138 different occupations. The book contains two introductory chapters describing how the data are presented and how to use the book. Twelve additional chapters, one on each of 12 career groups, present information on specific occupations and on the interests, acquired information, abilities, and background characteristics of individuals who later pursued those careers. Profiles of the typical characteristics of individuals pursuing each of the 138 careers are also included. Five appendices provide information on how to generate and interpret profiles for students who are now in high school.

A 16-page *Student's Booklet* provides instructions and information to assist students in using *The Career Data Book*. In addition, it contains summary information on each of the 12 career groups.

The Career Data Book is based on data obtained in the Project TALENT Five-Year Follow-Up Studies. Unlike other career information sources, which typically present only information about occupations and necessary or useful skills for persons in those occupations, *The Career Data Book* tells what individuals, who eventually pursued specific careers, were like when they were in high school. By presenting information which students can directly relate to their own characteristics, *The Career Data Book* provides a unique resource for students to use in examining and exploring career options.

The Career Data Book is intended primarily for use by school guidance personnel, though it also has value for employment counselors in other institutions. There are four main steps suggested for using *The Career Data Book* as a tool for practical vocational guidance: (1) Obtain a profile of the student's characteristics, (2) determine a set of occupations to investigate, (3) determine how well the student's profile matches the profiles for the selected occupations, and (4) advise the student on steps to take in exploring a career (or careers) in depth.

SUBJECT AREA(S)

Vocational guidance: Career awareness and exploration, individual self-assessment, and decisionmaking.

INTENDED USERS AND BENEFICIARIES

Although intended primarily for use by high school guidance counselors and students (especially noncollege bound students), *The Career Data Book* also has value for guidance personnel in other institutions, such as State employment offices, prisons, and large industries. The data book itself is used primarily by counselors, or by students with the counselor's assistance. The technical nature of the information (interpretation of test results and profiles) makes the book difficult for students with low math or reading skills to use directly.

The *Student's Booklet* is developed for use by students.

GOAL(S) OR PURPOSE(S)

The purpose of *The Career Data Book* is to improve practical career guidance for high school students, particularly for noncollege bound high school students, by providing relevant data for individuals to consider in their career planning and decisionmaking. There are no specific program objectives, as the book is intended as a resource document.

PATTERNS OF USE

The Career Data Book is essentially a resource book, intended for use in career counseling. The pattern and extent of its use will be a function of the nature and extent of the counseling and/or student interest. In addition to use in counseling, it can also be used as a supplement to academic instruction (e.g., mathematics) in programs attempting to integrate career education with traditional curriculums.

The book reflects a compromise between a "cookbook" approach to profile development and interpretation and a "basic resource" approach: It gives some guidelines for using and interpreting the profiles, but is also gives alternative suggestions for those interested in more, or less, sophisticated analyses. Thus, *The Career Data Book* provides for considerable flexibility in its use.

IMPLEMENTATION PROCEDURES

The Career Data Book requires that students have data on their own interests, information levels, abilities, and general background. Students' scores on current commonly-used tests can be converted to the TALENT-equivalents necessary for comparison with the data book profiles, using a table included in the data book.

Using its own funds and in collaboration with the staff of CTB/McGraw-Hill, AIR has also developed the Planning Career Goals Program. This program, scheduled for commercial distribution by CTB/McGraw-Hill in the fall of 1975, includes TALENT-equated tests, the results of which can be compared directly to the data book profiles. Moreover, the program provides for the student a profile of interests, abilities, and the like. This is the most recent in a series of programs developed by various groups, including AIR, to enable individuals to compare their own characteristics to TALENT findings; others include the PLAN guidance program, the Inter-American Test Battery, and various military service qualifying tests.

Personnel Required for Product Adoption and Implementation

Counselors using *The Career Data Book* should be skilled in interpreting test results and reading profiles. Counselors typically work with students on a one-to-one basis in using *The Career Data Book*. It is estimated that one counselor could effectively counsel between 100-200 students in a year, depending on other responsibilities.

ASSURANCES AND CLAIMS

Assurances

The majority of counselors participating in two workshops on how to use *The Career Data Book* felt that the book would not be harmful to students. (Those feeling that "some" harm might be done commented that the book was confusing and required explanation; the risk of harm seemed to be associated with students trying to use and understand the data without counselor assistance.)

The profiles in *The Career Data Book* present the typical characteristics of males or females who eventually pursued specific occupations: profiles for careers pursued predominantly by females are based on females' test scores, and profiles for careers pursued predominantly by males are based on males' scores. However, to insure that students of both sexes are able to use all the profiles, a table for determining the equivalents of the two scores has been included in the book. This is to correct any bias inherent in the data.

Use of the data book has not been monitored. However, the considerable volume of sales in the first year (over 6,000 copies) suggests that schools are finding it sufficiently transportable.

Claims

The majority of counselors participating in workshops on *The Career Data Book* said that: (1) The book was helpful for one-to-one counseling, and (2) the book was useful in a career education classroom setting.

In addition, numerous comments have been received from reviewers and users testifying to *The Career Data Book's* usefulness.

USING THE TALENT PROFILES IN COUNSELING: A SUPPLEMENT TO PROJECT TALENT'S CAREER DATA BOOK

Suggestions for the use of TALENT profiles in counseling

This supplement to *The Career Book* offers the guidance counselor both a set of occupation profiles based on TALENT 11th- and 12th-grade followup data, and a number of suggestions for use of these profiles in counseling. It consists of 4 parts: (1) An introduction to Project TALENT, (2) a presentation of 3 hypothetical case studies depicting various ways the profiles can be used in counseling, (3) over 100 TALENT profiles, and (4) a list and accompanying description of all TALENT publications of relevance to guidance counselors.

This supplement to *The Career Data Book* is especially designed for those counselors and researchers who have a copy of *The Career Data Book* and wish to use profiles with a greater validity in their work. Especially significant is the inclusion on each profile of information on job satisfaction and salary reported by those TALENT participants who are in the particular occupation. The combination of these current data with those collected in 1960 provides counselors and researchers with a very complete approach to career exploration, development, and research. The three hypothetical case studies draw on this material in various ways to highlight many of the ways these profiles may be used in counseling. Special emphasis is given in these hypothetical counselor-student conversations to clarifying occupational alternatives and exploring careers in general.

As is true with *The General Data Book*, students working with this supplement will need to work with the counselor to complete a personal profile, explore and consider various occupations and career groups, and explore in depth career areas of special interest.

SUBJECT AREA(S)

Vocational guidance, career awareness and exploration, individual self-assessment, and decisionmaking are the subject areas.

INTENDED USERS AND BENEFICIARIES

Like *The Career Data Book*, the supplement is intended primarily for use by high school guidance counselors and students (especially non-college-bound students); it can also be used by guidance personnel in other institutions, such as State employment offices, prisons, and large industries. The supplement is used primarily by counselors, or by students with the counselor's assistance.

GOAL(S) OR PURPOSE(S)

The purposes of the supplement to *The Career Data Book* are to improve practical career guidance for high school students, particularly for non-college-bound high school students, by providing relevant data for individuals to consider in their career planning and decisionmaking and to assist students in learning about various occupations—what they can offer as well as what high school skills they seem to require.

PATTERNS OF USE

The supplement to *The Career Data Book* is essentially a resource to be used in career counseling. The pattern and extent of its use will be a function of the nature and extent of the counseling and/or student interest. In addition to use in counseling, it can also be used as a supplement to academic instruction (e.g., mathematics) in programs attempting to integrate career education with traditional curriculums.

The supplement to *The Career Data Book* emphasizes the variety of ways in which the TALENT profiles may be used. Thus, it provides counselors with considerable flexibility in using the supplement to increase career awareness and exploration.

IMPLEMENTATION PROCEDURES

The supplement to *The Career Data Book* requires that students have data on their own interests, information levels, abilities, and general background. Students' scores on current commonly used tests can be converted to the TALENT-equivalents necessary for comparison with the data-book profiles, using a table included in the data book. The supplement does demonstrate, however, that the use of student self-estimates in building profiles may be a very good method—it increases and checks for student self-awareness. The supplement also shows how self-estimates and test data can be integrated.

Using its own funds and in collaboration with the staff of CTB/McGraw-Hill, American Institutes for Research (AIR) has developed the Planning Career Goals program. This program, scheduled for commercial distribution by CTB/McGraw-Hill in fall 1975, includes TALENT-equated tests, the results of which can be compared directly to the data-book profiles. Moreover, the program provides for the student a profile of interests and abilities.

Personnel Required for Product Adoption and Implementation

Counselors using the supplement to *The Career Data Book* should be skilled in assisting students to clarify their own occupational goals, interpreting test results, and reading profiles. Counselors typically work with students on a 1-to-1 basis in using the supplement.

ASSURANCES AND CLAIMS

The supplement is "safe" to use. Counseling experts have reported that they found it very useful. The presentation is clear and very straightforward. Each profile is drawn on both sexes, combined to eliminate any possible (apparent) sex bias. The scale on socioeconomic status which was presented in *The Career Data Book* is omitted from the supplement in order to reduce the chance of any negative predictions—"Poor people can't become doctors"—being made.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

SOURCES OF INFLUENCE ON CAREER DECISIONMAKING AND THEIR IMPACT ON CAREER ATTAINMENT: A HANDBOOK FOR COUNSELORS AND EDUCATORS (A PRODUCT OF CPSS, THE CAREER PLANNING SUPPORT SYSTEM)

A state-of-the-art (career decisionmaking) review

The handbook on sources of influence on career decisionmaking will provide a state-of-the-art review and synthesis of the role of "significant others" (influencers of individuals' career decisions). Since this handbook will center on empirical findings from research, the limitations of research and the utility of the information will be documented.

Such information is intended to stimulate counselors and educators to consider alternative means of delivering career guidance. Although much research has been accomplished documenting the role of "significant others," this information has not yet been made available in a single comprehensive document. This handbook fulfills that need.

As an information resource, the handbook will not prescribe specific guidance strategies. It will provide information which may guide the development of alternative strategies by individual schools. Another function of the handbook is to sensitize counselors and educators to the fact that the individual makes career decisions with a "sphere of influence" from individuals within the community and to identify for practitioners who those individuals tend to be.

SUBJECT AREA(S)

Careers and counseling

This product is not curricular. Its topic areas include: (1) Who influences the career decisions of youth and how; (2) the degree to which influencers differ by ethnicity and sex; (3) the limitations of knowledge about the influence process; and (4) the confidence with which counselors, administrators, and other educators may use this information in developing guidance programs.

INTENDED USERS AND BENEFICIARIES

Counselors, educational administrators, and other educators are the intended users.

GOAL(S) OR PURPOSE(S)

The goals of this product are to provide counselors and educators with state-of-the-art information about the influencers of young people's career decisions and how their influence operates and to enable more effective planning and execution of career guidance programs within individual schools.

PATTERNS OF USE

The handbook is to be used as a resource in planning and carrying out career guidance programs.

ASSESSMENT PROVISIONS

No formal testing is developed with this handbook. If a school uses this information to implement a guidance program as part of the career planning support system, it would be evaluated through the procedures prescribed as part of the career planning support system procedure.

IMPLEMENTATION PROCEDURES

As a resource handbook, there are no specific procedures for implementation. This would be contingent on the type of program (if any) an individual school might choose to develop.

The handbook is the only material or equipment associated with the product. When a school purchases the career planning support system, it is included as part of the package. The handbook can also be used by itself. In single copies, the cost of the handbook may range between $3 and $4. The product is reusable and should require a time investment of 2 to 3 hours for comprehension.

INFORMATION CURRENT AS OF MARCH 1975 ■

EXPERIENCE-BASED CAREER EDUCATION (EBCE)

An inschool and out-of-school secondary school program focused on career development and guidance

Experience-Based Career Education is a secondary school program that combines in school and out-of-school facilities and personnel in an educational program focused on careers. Its purposes are: (1) To help students develop a rational, reality-tested career plan; (2) to develop and utilize self-definition, self-appraisal, decisionmaking, information processing, and responsibility skills; and (3) to promote measurable academic growth in communications skills and mathematics through purposeful, self-directed activity. The content covers all of the traditional areas associated with secondary schools, subject to the availability, willingness, and ability of employer and community participants. Career areas included in the program are determined by student interests and the employer/community resource pool.

The students participate in a core instructional program that has three major subdivisions: Career Development, Career Guidance, and Academic Resource Center. Career Development provides each student with firsthand experience in actual work settings. Students spend 1 to 2 days per week working at commercial, industrial, or service agency sites. They can choose from approximately 20 clusters of employer sites for exploration. The clusters include areas such as animal resources, construction, finance, social service, and transportation. Once students have made tentative career choices, they carry out an indepth investigation of a single job or site. This may last from a few weeks to many months. All activities which take place at employer/community sites are taught by practicing experts in the area being studied.

Career guidance consists of small-group sessions and individual counseling. The student's experiences at employer sites are used as a resource to promote self-exploration, values clarification, life skills, motivation to learn, career planning, and integration of program activities.

The Academic Resource Center, the third component, is designed to meet the individual academic needs of students in communications skills and mathematics. Individualized learning for adults is the primary instructional program used.

For the remainder of their high school program, students attend regular classes.

SUBJECT AREA(S)

Career Education

The program is focused on three general areas: Career development, career guidance, and basic skills instruction.

INTENDED USERS AND BENEFICIARIES

Experience-Based Career Education (EBCE) is for students in grades 9 through 12. There are no restrictions on academic interests or achievement.

GOAL(S) OR PURPOSE(S)

EBCE is part of a total high school program that concentrates on the following student learning objectives: (1) To facilitate the emergence within each student of a rational, reality-tested career plan intended to guide and shape career decisions and future behavior through a series of structured activities at employer/community sites; (2) to provide students with means for acquiring general knowledge and skills to improve their interaction with the economic sector; (3) to provide students with means to acquire focused, reality-based experiences to test emerging life interests and pursue evolving lifestyles; (4) to develop and utilize self-definition, self-appraisal, decisionmaking, information processing, and responsibility skills; and (5) to promote measurable academic growth in communication skills and mathematics through purposeful, self-directed activity.

PATTERNS OF USE

A team of resource coordinators implement the career development aspects of the program. This team is responsible for recruiting employer/community participants, constructing instructional programs, monitoring, and assisting in the revision of site programs. A team of counselors delivers guidance services to the students. The counselor and resource coordinator roles may be combined. A team of mathematics and English instructors, assisted by clerical aides, implement the academic resource center by providing individualized instructional systems in their content areas. The academic resource center employs programed sequencing and self-pacing.

The learner assumes a variety of roles in the program. Among them are discoverer, observer, evaluator, creator of self-structure, problem solver, reader, and writer. In studying career areas, the student generally begins with exploration activities and moves toward more specialized investigations of career areas of particular interest.

ASSESSMENT PROVISIONS

Built into each program component are assessment and recordkeeping provisions to help evaluate student needs, progress, and attainment of objectives. In addition, an evaluation package is available to assess student group results. Included in the package are instruments to assess career knowledge, interests, and attitudes; student attitudes toward self, others, and learning environments; and basic academic skills.

TIME REQUIREMENTS

EBCE can be applied to all 4 years of secondary school education. The time any one student spends in the program depends on individual interests and abilities. A minimum of 1 year is suggested. Involvement in all three program components requires approximately 15 hours per week.

IMPLEMENTATION PROCEDURES

EBCE is not sufficiently developed so that it can be used outside of its development site without technical assistance and training from the developer. These are both available on a cost-reimbursement basis. Most secondary schools will need to make major changes in scheduling, organization of personnel, and management systems if they are to fit into the existing components of the program. However, the program's flexibility does allow changes to be made in the individual components so that they can better fit local needs and constraints. A community may react negatively to having students out of the school building for learning experiences. This can be alleviated by communicating the planned and meaningful nature of the program. Also, the program could be perceived as being only for slow, noncollege-bound students. This is not the case, and its success with college-bound students should be pointed out. Crucial to the implementation of EBCE is the willing cooperation of employer/community resources. Their availability should be carefully ascertained before implementing the program.

All staffing patterns indicated are based on a student enrollment of 300 participating for three-fourths of their secondary education credits during a given year.

A total of 14 professional staff assisted by 3 support staff is necessary to implement the program. The professional staff includes one manager, eight counselors and resource coordinators, and five English and mathematics instructors. Support staff include clerical aides and one secretary. Staff costs are estimated at $237,000.

Training and technical assistance will be necessary for the adoption of the product. About 60 days of training and technical assistance are anticipated. At $250/day this amounts to $15,000.

Student and staff travel is estimated at $13,000. Telephone costs are estimated to be $3,900. Printing and reproduction necessary for product implementation is $4,000. Conference expenses for employer/community participants will be about $2,000.

One time costs for cassette tape players, filmstrip viewers, and storage cabinets for audiovisual materials are $1,095.

Cost per student, per year, is $1,046.65.

ASSURANCES AND CLAIMS

Assurances

Materials have been carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Selection procedures have been established to assure equal opportunity for use of the product by all applicants. Use of the product has not resulted in any observed harmful effects.

The product is transportable with technical assistance. The product is currently in a dissemination phase to test issues regarding replicability.

Claims

The following claims are asserted as program effects: (1) Students acquire increased mastery in basic academic skills, (2) students develop increased mastery of career awareness and knowledge, (3) students develop enhanced attitudes toward learning environments, (4) students evidence positive attitudes toward the program resources, and (5) parents of students evidence positive attitudes toward the program.

Evidence of the effectiveness of the product is provided by the results of an internal summative evaluation conducted during fiscal year 1974 under the supervision of the National Institute of Education. Two groups of students were utilized to test the effectiveness of the product. The experimental (E) group consisted of 76 10th- and 11th-grade students who participated in the program. A nonequivalent control (C) group of 81 students randomly selected from the same high school as the E group constituted the second group.

Both standardized and program-developed instruments were used in the evaluation. The following instruments were administered to E- and C-group students on a pretest and posttest basis: The Comprehensive Tests of Basic Skills (CTBS), the Career Maturity Inventory (CMI), and the Assessment of Student Attitudes (ASA) survey. The first two are available commercially and the third was prepared by Research for Better Schools, Inc. Two other sources of information were used to generate data on the effectiveness of the product: The Student Opinion Survey (SOS) and the Parent Opinion Survey (POS). Analysis of the results supports each of the claims asserted for RBS EBCE. Further documentation of these claims is contained in papers presented at the annual meetings of the American Vocational Association and the American Educational Research Association.

EXPERIENCE-BASED CAREER EDUCATION (EBCE)

An alternative education program that provides comprehensive learning opportunities in the community for 16- to 18-year-olds

Experience-Based Career Education (EBCE) is an alternative secondary education program that provides comprehensive learning opportunities for young people ages 16-18, using the community as the classroom. Little tie to the traditional high school is required. While career interests of students are used for planning learning experiences, the curriculum gives equal attention to basic skills, life skills, and career development. Students successfully completing EBCE graduation requirements receive a standard high school diploma awarded by the host school district. Professionally certified personnel who are responsible for the program wear titles such as "learning manager" and "employer relations specialist." Employer instructors recruited on the basis of student career interests are equal partners in the EBCE enterprise. They range from attorneys and automotive mechanics to yardmasters and zoologists. They are people who are interested in sharing time with inquisitive adolescents. These resource people make their shops and offices available for periods ranging from 3 days to 3 months, demonstrating the strong alliance that is possible between education and work.

EBCE provides an operational test of the following assumptions:

That students can acquire useful knowledge and skills through direct involvement in personally relevant off-campus learning situations;

That the school classroom can be viewed as just another community resource rather than the primary locus for learning;

That students will test a number of career options before locking themselves in too early on a particular job and training sequence;

That the community will make valuable contributions in program policymaking if given wide-ranging authority;

That resource persons holding positions of responsibility in the working world will provide career-related expertise which cannot be duplicated by the schools;

That learning is a process that can be managed, suggesting new roles for staff;

That learning can be integrated in problem-centered projects more effectively than when subject areas are studied separately;

That students can be measured on what they can do (perform) rather than solely on what they know.

SUBJECT AREA(S)

No formal "subjects" are studied in EBCE for their own sake, unless the student chooses to enroll in coursework in a formal educational institution because it relates to a negotiated learning plan. EBCE "instructional" outcomes are clustered into basic skills, life skills, and career development; equally important effects of EBCE that are more difficult to measure are called "other outcomes."

INTENDED USERS AND BENEFICIARIES

The EBCE program is intended for secondary-aged students of both sexes who are at any ability and achievement level and prefer an alternative learning style. Another beneficiary of the program is a new alliance between education and work, whereby the community plays a greater role in the transition of youth to adulthood.

The handbooks and other products generated by the EBCE program are targeted for potential adopters and trainers who, with technical assistance, can modify the EBCE program to fit local needs: Local education agency EBCE staff, State department of education personnel, higher education teacher training personnel, business and labor leaders interested in EBCE installation, and the like.

GOAL(S) OR PURPOSE(S)

EBCE program outcomes are grouped into three categories.

Life skills goals are to help students: (1) To increase their ability to gather, analyze, and interpret information; (2) to increase their ability to recognize and apply scientific procedures and methods to be able to analyze the impact of technology on natural environments and cultural values; (3) to accept the responsibility for the effect that their behaviors and attitudes have on themselves and other people; (4) to increase their ability to understand democratic processes; and (5) to demonstrate survival skills that cover the economic, planning, legal-political, health-safety, property maintenance, recreational, and occupational aspects of living.

Basic skills goals are to help students: (1) To be able to perform applied skill tasks related to careers of interest to them; (2) to improve their performance level of the basic skills (reading, writing, oral communication, and mathematics); (3) to become aware of the level of basic skills needed to enter careers of interest to them; and (4) to demonstrate an increased willingness to apply basic skills to work tasks and to a vocational interest.

Career development goals are to help students to increase their knowledge of their own aptitudes, interests, and abilities; and to develop the general skills of job finding, job application, on-the-job negotiation, and dependability necessary in daily work interactions.

PATTERNS OF USE

Patterns of use for EBCE vary considerably and are presently under test in 11 Pacific Northwest school districts. Some communities may prefer to adapt the entire EBCE model (for example, as a physically separate alternative school governed by a private, nonprofit corporation or school district, or as a school within a school) while others are using certain key elements—such as the career exploration process—in existing schools and off-campus alternative programs.

ASSESSMENT PROVISIONS

Students volunteering for the program were randomly assigned to participate in a control group. Extensive pretesting and posttesting, using a true experimental design, were conducted in the areas of basic skills, life skills, and career development. Student progress is monitored continually by the project staff and employer instructors. In addition to an independent external evaluation by Educational Testing Service, a NWREL evaluation unit performed extensive evaluation. Frequent staff and student self-assessments are also conducted.

TIME REQUIREMENTS

EBCE is an alternative to the regular school year program. Individual student scheduling is negotiable to accommodate to the hours and expectations of cooperating employer instructors.

IMPLEMENTATION PROCEDURES

Special Equipment and Facilities

EBCE requires a learning center with facilities for quiet student study, group activities, and one-to-one staff/student conferences. Learning resources recommended include audiovisual aides, inexpensive cameras, reference materials, and programed learning materials. EBCE staff encourages students to make use of available learning resources in the community as much as possible. All student learning activities on employer sites require "hands-on" familiarity with reading materials and equipment normally used in that occupation or business. A system for transporting students to and from learning sites in the community is necessary.

Special Services

Training in EBCE procedures for students, staff, and cooperating employer resource persons is essential. Guidelines for such training are provided in NWREL's EBCE products.

Organizational Requirements

EBCE represents a total restructuring of the traditional school program in: Management and organization, curriculum and instruction, use of the community resources, and student services. Brief implications for each restructuring follow:

Management and organization.—A separate governing body or advisory board is recommended to set policies for EBCE; community relations is extremely important and requires ongoing attention. Personnel must be flexible and creative—general educators are preferred subject matter specialists. Business management requires particular attention to insurance, transportation, and so forth.

Curriculum and instruction.—The EBCE curriculum and instruction program hinges on individual student responsibility for using the following strategies to the greatest extent possible: Projects, explorations, competency completions, employer seminars, journals, group activities, programed and other resources, tutors, optional on-campus classes, and full utilization of employer sites for educational purposes. Support provided by the program includes an accountability system that helps students negotiate activities and plan their time.

Use of community resources.—Cooperating volunteers from the community must be recruited and prepared systematically for EBCE responsibilities. An analysis of the learning potential of participating employer sites is critical for successful student learning.

Student services—Student guidance is not a separate function in EBCE, but is an expected role for every adult coming in contact with students. An important support function in EBCE is a recordkeeping system that serves students and staff alike. A portfolio of student accomplishments is designed to replace or supplement the traditional high school transcript as a record of student achievement.

ASSURANCES AND CLAIMS

The EBCE program has benefited from rigorous internal summative and formative evaluation during the 3 operational years that the parent design and test site have been serving students. In addition, a number of outside reviews have been held. For instance, during school year 1973-74, a blue ribbon panel composed of Keith Goldhammer, Dean, College of Education, Michigan State University; Charles Bowen, Director of Educational Development for IBM; Claude Brown, Research and Evaluation Director, Teamster's Local 688; Glenys Unruh, President, Association for Supervision and Curriculum Development; and Richard Graham, Director, Center for

Moral Education, visited the EBCE program and issued a report on their findings. During school year 1974-75, an external evaluation is being conducted by Educational Testing Service. The U.S. Office of Education/National Institute of Education Dissemination Review Board has examined fiscal year 1974 evaluation results as well.

In addition to the ongoing evaluation, the EBCE program meets Oregon State graduation requirements with the expectation that the same will hold true in other States. EBCE students are awarded a regular high school diploma on completion of program requirements. Graduates have been able to enter postsecondary programs and/or employment with no difficulty.

EBCE is open to all students. When more students apply than can be accommodated, a random selection procedure is recommended. At the parent site in Oregon, an equal number of boys and girls have participated—representing the full range of socioeconomic, racial, and achievement and ability levels of their peers at the cooperating high school. All participating employer sites are open to all students, with several girls exploring automobile mechanics and several boys trying out telephone operating, for instance.

EBCE is presently being implemented in one other school district in Oregon. Other "whole model" EBCE programs are on the drawing board in Alaska, Oregon, and Washington. Additional sites are experimenting with particular EBCE procedures. The EBCE cooperating replication site is receiving technical assistance from the developer.

EXPERIENCE-BASED CAREER EDUCATION (EBCE AEL VERSION)

A comprehensive alternative to traditional secondary school programs allowing students to earn credits through community experiences

This is a comprehensive, self-contained alternative to traditional classroom and job preparation programs for high school students (grades 11 and 12) who volunteer to earn all of their required and elective credits for a given year (or semester) through direct community experiences. Students spend about 75 percent of their time in the community, under the tutelage of a series of adults who are performing their normal career and avocational activities. Neither students nor adults are paid.

Individual students spend an average of 4 weeks (4 days per week) on each community site pursuing specific academic and career objectives. For example, a student who is exploring the "real world" dimensions of an ecology career might simultaneously be conducting water purification experiments (chemistry), performing statistical analysis (mathematics), writing reports (English), or investigating political aspects of water pollution legislation (social studies).

Students relate to a single Learning Coordinator (LC) for all aspects of their programs; there are no large-group sessions, classes, or "content teachers." The basic "grist" for program decisionmaking is detailed information of the specific learning potential at each site, a structure of 120 concepts and 600 related objectives, a cross-referencing system tying objectives to resources (community and supplemental), and measured and self-addressed data about each student's unique needs and characteristics.

The student and LC jointly determine the general learning goals for the year and specific objectives for each 6- to 12-week period, and then translate them into detailed site activities (what the student will do; how, when, with which adults; the products and assessment criteria; the supplemental materials; and how credit will be assigned). Once a week, the student and LC assess the outcomes and make decisions about the next objectives, activities, and sites.

The emphasis throughout the program is on: Learning through direct experience; carefully planning, monitoring, and assessing projects; giving students responsibility for program decisions and achievement; integrating major disciplines; and personalizing objectives and activities to meet the unique needs of each student.

SUBJECT AREA(S)

Most high school academic subjects (mathematics, English/communications, social studies, and science); career-related subjects (exploration, planning, and decisionmaking); and personal development/guidance are mastered through community experiences, with some supplemental resources. No specific subject text materials are developed. However, existing materials are integrated into a student's program in an innovative and unique way.

INTENDED USERS AND BENEFICIARIES

Users can be any school system desiring to offer students a viable, valuable alternative to the traditional classroom approach. Student beneficiaries are those in grades 11 and 12 who volunteer to earn all of their required/chosen credits for a given year or semester through direct community experiences. The program appears appropriate for a wide spectrum of students in relation to academic standing, reading level, interests, sex, race, and socioeconomic status.

Staff beneficiaries are those instructional, administrative, and guidance personnel who benefit from a broader, more personalized (one-to-one), and experiential-based approach to the education of youth. For example, instead of imparting content, LC's guide the students in obtaining insights from community adults and academic and career information; evaluating what is learned in terms of self-growth; and planning and implementing each activity.

Community beneficiaries are those adults interested in direct involvement in the education of youth. Parents who value deeper career and personal preparation of their children for adult functioning will benefit from this program.

GOAL(S) OR PURPOSE(S)

The major purposes are: (1) To bridge gaps between high school education and adult community life (especially employment); (2) to provide activities which simultaneously achieve academic, career, and personal objectives; (3) to provide such activities experientially, through direct adult-student interactions, on a planned, monitored, and evaluated basis; (4) to provide students with equal responsibility and authority (with staff) for the creation and accomplishment of their learning programs; and (5) to broaden the base of those adult individuals and institutions who directly participate in the education of youth.

PATTERNS OF USE

EBCE is a comprehensive, full-time, self-contained alternative to traditional high school education programs. To select general concepts and generic courses as the basis for a yearlong learning program, each student uses credit requirements and measured and self-assessed ability, interests, and temperament characteristics. Learning activities are interdisciplinary, focus on community-site activity, and are continuously generated in response to the students' overall program goals.

The program is process oriented rather than materials oriented. Major program documents allow students and staff to select the most appropriate personalized pattern of overall learning objectives and goals; to continually create specific learning activities keyed to the overall program and specific sites and adults; to place students with adults who will assist them in achieving the selected objectives; to supplement onsite experiences with other learning resources (such as texts and films) to assure that the specified learning has occurred; to evaluate and document the learning activities and outcomes; and to use each set of experiences in creating subsequent learning activities.

The program's structure is flexible so that the students have practically infinite choice as to what, when, and how they will learn. The determining factor is the type and number of participating adults.

ASSESSMENT PROVISIONS

At the outset, transcripts, standardized tests (e.g., GATB, ITED, and OVIS), and special self-assessment measures aid students and staff in jointly selecting overall program areas and goals. Specific learning objectives, products, and assessment criteria are built into subsequent learning activity. The LC and the student jointly review and discuss the events and outcomes of each site activity to assess how well the specified objectives have been met and to identify any meaningful, serendipitous learning which has occurred. Such assessments guide the joint selection of the next set of activities (objectives, activities, and site choice). Credit "points" are awarded for each learning activity and cumulatively translated into course credits and grades.

TIME REQUIREMENTS

EBCE is a full-time alternative to regular high school for periods ranging from one to four semesters. Onsite experiences average 4 days per week, with the 5th day spent in student-LC conferences, special projects and studies, group guidance sessions, or other learning activities.

IMPLEMENTATION PROCEDURES

Special facilities requirements consist of a student learning center providing room for individual study, a small-group discussion/meeting room, small private/semiprivate offices for each LC, and space for limited clerical/logistics support personnel.

Intensive training will be required for the program staff, both preservice and inservice, because the instructional and administrative functions differ markedly from those found in traditional educational programs.

Program materials (guides and manuals) and resources (community sites) have proven highly durable and functional over 3 years of tightly controlled and evaluated operation. The reaction of the community (participating adults and institutions, parents, and educational authorities) has been consistently supportive; significant negative effects have not been discovered. The uniqueness of the program requires revisions in a majority of the participants' attitudes toward their roles and responsibilities within the educational process (e.g., content-oriented teachers must become process- and facilitation-oriented coordinators; students must accept active responsibility for learning and decisionmaking; community adults must provide information and guidance beyond imparting specific job training skills).

The program has been tested in only one community. Both internal and external reviewers have judged that the program will be useful and effective in other communities, but this judgment remains to be tested during the 1975-76 school year when new communities are expected to adopt the program. The operational costs of the program are competitive with the costs of other special school programs (e.g., remedial, gifted, and cooperative). Program installation in new communities will require such activities as recruitment and analysis of community sites, selection and training of staff, selection and preparation of facilities, adaptation/supplementation of site-keyed program manuals and catalogs, and approval of EBCE credit translation mechanisms by local school officials. The developer can provide technical assistance and training.

Summary Cost Information

The average cost per student for consumable materials is approximately $20; the initial cost per learning coordinator for materials is approximately $250; and the average adopter might spend another $350 for shelf-reference materials. Thus, 40 students, 2 learning coordinators, and the average shelf-set supplement would require $1,550 for materials.

Continuation costs would then remain at $20 per student (local reproduction costs for materials) until the program expands past five learning coordinators (requiring additional shelf-set materials).

There would be additional costs related to learning coordinator training, site analysis training, and program operation. These costs would encompass materials, travel, and consultant time.

Personnel Required for Product Adoption and Implementation

It is estimated that the program can be implemented with a 1:20 staff/student ratio. Beyond about 60 students (in a medium to large community), a coordinator of site placements becomes necessary to maintain logistical control. This, plus administration, will add fractional units to the FTE cost. Current implementation estimates project approximately 80 person-days for training and several person-months of local time for installation (e.g., site recruitment).

ASSURANCES AND CLAIMS

Assurances

The program has been operationally tested in only 1 community, but representatives of some 20 diverse school systems and several NIE-sponsored review groups have judged it highly transportable.

The program has served a deliberately selected cross section of the total population. Three years of internal evaluation (including testing with control groups), periodic opinion sampling of all types of participants, and external review panels have revealed no harm to the participants.

Similar evaluations and reviews have consistently found the program (materials and student outcomes) free of social or ethnic bias.

Claims

First, test results indicate certain positive student outcomes. EBCE students have performed on a level with controls on achievement measures and measures of career maturity and decisionmaking. Parents, participating adults, and visitors have observed that the students exhibit strong social and career maturity behaviors in adult settings.

Second, the delivery system is conceptually and structurally sound. It emphasizes planned, managed, and documented experiential learning, and is structured to respond to individual student needs. Both evaluation findings and observers, including Keith Goldhammer (dean, College of Education, Michigan State University) and Glenys Unruh (president, American Society of Curriculum Development), have verified the capabilities of the system.

Third, the continued operation of the program for 3 years, participation by hundreds of adults, student and parental enthusiasm, findings of external reviewers, and responses of about 20 other communities indicate that several basic assumptions about experiential education have been verified. Specifically, it was found that students and adults will participate without pay; that parents and community institutions are eager to play a more active role in education; that career and academic learning can occur and be managed experientially; that school systems will participate; and that expanded, generalist staff roles can enhance some aspects of learning (e.g., career guidance) without diminishing others (e.g., general academic performance).

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student set: Interest, ability, and temperament matrix; activity sheets; student program profile; reporting forms; concepts and objectives/course matrix; site learning guides	1 per student	20.00*	Yearly	
Learning coordinator set: Site analysis learning guides; cross-reference catalogs; implementation manual; concepts/objectives manuals; course lisings; standard activity sheet manuals	1 per LC	250.00	Reusable	
Shelf reference set	1 per 5 LC's	700.00**	Reusable	

*Estimated at actual reproduction costs; no external distribution.

**Composed of commercially obtainable materials generally available to adopting systems, either originals or suitable substitutes; hence most of the cost would not apply.

FAR WEST LABORATORY EXPERIENCE-BASED CAREER EDUCATION

A experience-based alternative to traditional secondary school formats

Far West Laboratory Experience-Based Career Education (FWL-EBCE) was developed to provide students in grades 10, 11, and 12 with a full-time alternative, comprehensive high school program. By focusing on direct experience in a wide variety of real-life settings, EBCE seeks to provide students with a secondary education in such a way that they acquire the skills and knowledge necessary to choose, enter, advance, and find satisfaction in an adult role. Individually planned learning programs utilize large and small businesses, governmental agencies, community institutions, and individual professionals and entrepreneurs.

The pilot program serves a citywide, ethnically mixed clientele with a broad spectrum of intellectual capacity, but is suitable for other types of communities. It can be staffed from existing school district personnel, with a staff/student ratio financially feasible in most communities.

FWL-EBCE is experience based: Students learn traditional subject matter in work settings and learn how to relate to adults at work. It is career oriented: Students gain a broad understanding of the world of work—its rewards and shortcomings—and develop the decisionmaking skills and knowledge of self necessary for making informed career choices. It is student centered: Students act as planners, decisionmakers, and self-evaluators, and learn to face the consequences of their decisions.

Resources are organized into courselike groupings called "packages," which contain goals and guidelines for planning individualized projects in career/subject fields.

Learning coordinators work with 25 to 30 students each, helping them develop long-range goals, shorter range objectives, and project plans. They also monitor progress, provide feedback, and help evaluate performance. The resource analyst is responsible for developing and maintaining the external resource persons and organizations; the skills specialist coordinates supplementary learning activities, such as tutoring in basic skills; and the director is the instructional leader of the school.

A 20- to 26-member Policy Advisory Board, representing employers, unions, professional and business associations, independent professionals and entrepreneurs, parents, students, the school district central office, community colleges, and community organizations, serves to assist with implementation, including the recruitment and maintenance of learning resources.

Upon entering the program, students receive a 3-week orientation to become acclimated to EBCE and begin assessment of interests, abilities, achievement, career goals, and educational needs. During orientation, long-range goals are specified, and students plan and conduct a brief miniproject. Students then plan in greater detail and complete individually planned projects which require and promote growth in academic skills and career awareness. Students are not expected to develop basic skills competence solely through working with resource persons or organizations. When indicated, students' projects also include planned supplementary instruction. Limited course work may also be part of a project. Graduates receive regular high school diplomas, with credit in regular subjects.

SUBJECT AREA(S)

The subject area is a comprehensive program in which course credit can be earned for any regular high school course.

INTENDED USERS AND BENEFICIARIES

FWL-EBCE was designed so that it could be adopted and installed in any school district which operates high schools that enroll students in grades 10, 11, and 12. Although the pilot program was developed in an ethnically mixed urban community, the developers designed the model so that it can be adopted in a wide variety of communities. The clientele in the pilot program represents a cross section of the ethnic identity, sex, school achievement, and socioeconomic level of the total community.

GOAL(S) OR PURPOSE(S)

The broad goals of FWL-EBCE are to provide students with a comprehensive secondary education and career development skills. Course credit can be earned at various institutions. For example, credit for biology can be obtained from medical research laboratories, hospitals, and veterinary clinics; mathematics reqiurements can be met in architectural organizations. When a resource person or organization does not provide all the appropriate experience for course credit, the project may include some supplementary work such as tutorials, programed instruction, or a course in a community college. The development of student skills and awareness in the areas of career decisionmaking and planning, self-development, oral communications, writing, reading, basic quantifying, interaction, and problem solving is the main objective. In addition, the student will develop and expand skills of inquiry and critical thinking in media skills, physical fitness and health, social and cultural awareness, political awareness, economic competence, technological skills, aesthetic/creative development, social science, science, mathematics, and foreign languages.

PATTERNS OF USE

Although FWL-EBCE was designed to be a complete program, the developer recognizes the likelihood of some partial adoptions. (Part-time for some students or some reduction in the number of grade levels enrolled are examples.) The initial dissemination effort is focused on adoption of the complete model.

FWL-EBCE is comprised of the following components: (1) Audiovisual Orientation (6-minute tape-slide presentation), (2) The Community Is The School, (3) Experience-Based Career Education—An Overview, (4) Resources Development and Support Handbook, (5) Student Recruitment and Selection, (6) Student Orientation Handbook, (7) Guide for Resource Persons and Community Organizations, (8) Student Guidance Handbook, (9) Prototype Learning Packages, (10) Learning Package Development and Implementation Handbook, (11) Supplementary Curriculum Handbook, (12) External Relations Handbook, (13) Administration Handbook, and (14) Final Evaluation Report—Fiscal Year 1974. Although these products may be used in any order, this sequence seems to have utility for those studying the feasibility of adopting the model.

ASSESSMENT PROVISIONS

Students are selected randomly from a pool of eligible volunteers who responded to a springtime recruitment drive in all junior and senior high schools. There are no prior interviews or tests. Transcripts of credits are reviewed to screen out those applicants who are more than one-half year below their age/grade level in credits earned toward graduation.

Once admitted to the program, students undergo a continuing process of diagnosis and assessment as they engage in long-range planning and project planning and implementation, and as they submit their completed projects for credit assignment.

TIME REQUIREMENTS

A full-time school calendar with two semesters per year is required.

IMPLEMENTATION PROCEDURES

The FWL-EBCE pilot program is located in a downtown office building in Oakland, California, near local and rapid transit lines. Instead of classrooms, the facility has conference rooms for Learning Coordinators to hold small group meetings as well as staff cubicles for individual conferences. Tape recorders for use of selected programed learning materials are on hand in addition to a few typewriters. The facility does not have a library because libraries are located out in the community like most other learning resources.

Some adopters of FWL-EBCE plan to use existing school facilities instead of a separate facility, and their experience will provide valuable information for future adopters.

Staff training and technical assistance are being provided to adopters by FWL-EBCE staff, who are also developing a network of service centers and demonstration sites to serve future adopters. State educational agencies will have major involvement in the design and functioning of the network.

Special user considerations are related to the need for extensive involvement of persons and organizations from the larger community. The procedures described in the External Relations Handbook can develop strong FWL-EBCE linkages to the larger community. A strong Policy Advisory Board is very helpful in the recruitment of a wide range of resources.

Personnel Required for Product Adoption and Implementation

Three suggested staff/student configurations are shown in the table below, each with the type of district employee who could fill the EBCE role.

PERSONNEL REQUIRED

FWL-EBCE Staff	100 students	250 students	500 students
Director (high school principal)		1	1
Director (high school vice principal, with specialization in curriculum and instruction)	1		1
Learning coordinator (teacher or counselor)	4	10	20
Skills specialist (teacher)	1	2	3
Resource analyst (teacher)	1	1	2
Secretary (school secretary)	1	1	1
Recorder (records clerk)	1	2	3

ASSURANCES AND CLAIMS

Assurances

Approximately 150 students have enrolled in the pilot program during its 3 years of operation in Oakland, California. Many students have spent 2 full years in the program. The socioeconomic status, ethnic, and male-female composition are representative of the general Oakland high school population. No negative effects have been noted. For some students FWL-EBCE is clearly less suitable than a more traditional classroom program, and provision should be made for easy transfer without penalty to a regular high school program.

FWL-EBCE students progress toward the diploma at least as rapidly as their counterparts in the regular high schools, as evidenced by the average number of credits earned per semester or school year. Credit is certified by counselors in the regular high schools. FWL-EBCE is not a handicap to college admission. The majority of graduates to date have gone on to community colleges, state colleges and universities, or 4-year private schools.

FWL-EBCE does not perpetuate occupational bias with regard to sex or race and, in fact, works vigorously against such stereotyping. Students are not preprogramed into career fields on the basis of test scores or socioeconomic characteristics but are encouraged to freely explore their full range of individual interests and opportunities.

Transportability has not been tested directly. However, 11 school districts have studied the pilot program and descriptive documents in detail and have concluded that the model can be adopted in their communities without major difficulty. Five of the districts are now preparing to implement FWL-EBCE by the next school year.

Claims

In general, most claims for FWL-EBCE must await the completion of the Fiscal Year 1975 External Summative Evaluation. The Fiscal Year 1974 Final Report gives evidence to support a limited number of claims. These are:

1. People serving as resources for the Far West Laboratory are positive in their support of the FWL-EBCE concept; sufficient resource persons were located and maintained to enable implementation of the FWL instructional program. Indications are that future FWL-EBCE programs can maintain sufficient pools of resources to provide necessary learning opportunities to their students.

2. Many students dissatisfied with regular schools see the FWL-EBCE program as relevant to their current and future needs. Almost all FWL students express a decided preference for the school's program over their previous program. Students' performance increased in both quality and quantity of work by gaining experience in the program and by adjusting to its requirements for personal motivation, direction, and responsibility.

3. Students and resource persons alike were enthusiastic about student growth in the area of self-development and interpersonal skills.

4. The learning of basic skills did not suffer through the elimination of classroom instruction: There was no significant difference in performance between the experimental and control groups although the remedial portion of the basic skills program was not fully in place until spring 1974. The primary emphasis of the program is on skills acquisition through field experience.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Audiovisual orientation	1 per district	25.00	Reusable	
Handbook and manuals (documentation of model)	10 sets per district	50.00	Reusable*	
Evaluation report	1 per district	20.00	To be updated annually	

*Handbook and manuals are reusable until the implementing district produces its own site-specific versions.

DEVELOPER/AUTHOR:

Far West Laboratory for Educational Research and Development
1855 Folsom St.
San Francisco, Calif. 94103

Robert Peterson, Project Director

AVAILABILITY

Prototype documentation will be available in summer 1975 to all State enforcement agencies who are willing to coordinate the requests for information about FWL-EBCE. Prototype documentation is available to any local enforcement agency (LEA) which sends (at LEA expense) one or more staff members for an orientation, 2-day "residency" at Far West Laboratory for Educational Research and Development.

Staff training and technical assistance will be given during spring 1975 to LEA's who adopt the whole model and will participate in the planned field test procedures. Other LEA's will receive staff training and technical assistance if FWL staff is available.

Beginning in fall 1975, the first FWL-EBCE Service Center will be in operation, and there will also be a demonstration site operating in conjunction with the center. Staff training and technical assistance manuals will be available in prototype form by winter 1976.

An audiovisual (8-minute tape-slide) presentation is available for creating special awareness, or a brochure, "The Community Is The School." All FWL-EBCE materials are available from:

Far West Laboratory for Educational Research and Development
1855 Folsom St.
San Francisco, Calif. 94103

INFORMATION CURRENT AS OF MARCH 1975 ■

MANAGEMENT INTERNSHIPS: A NEW MODEL FOR YOUTH SOCIALIZATION AND LEARNING

A report on increasing on-the-job training by means of internships in general work skills

The widespread practice of credentialism by business compels many able youths to attend college to become qualified to hold significant jobs. At the same time, many critics are recognizing that modern colleges are poorly adapted for transmitting to students many necessary work skills and attitudes. This report describes a system for management internships designed to deal with this problem of unconstructive pressure toward college attendance.

Interns will be college-eligible persons without college degrees. They will be hired by employers and trained, over several years, to a job level typically occupied by employees entering with bachelor's degrees. The employer costs created by such training arrangements will be paid by both the interns and the government. Such costs will be based on the annual identifiable cost per student at typical State universities, i.e., approximately $3,000 per year. Interns will not spend a significant amount of their time on formal academic work, nor will they receive bachelor's degrees at the conclusion of their job responsibilities.

The intern who successfully completes the internship will possess a body of general work skills applicable to many jobs. Whether the graduated intern will stay with the employer will be determined by desires of the graduate and employer at the end of training; neither party is committed in advance to stay with each other.

A well-trained intern will have earned several references based on the qualified supervisor's firsthand observation of work which is performed. Such references should enable interns to obtain responsible jobs with those employers who are concerned with the low level of work skills possessed by many college graduates.

The proposed internship system parallels many of the features of existing State university systems, such as the sharing of costs between students and government. The system has actually been designed with a view to its ultimate adoption and financing by State governments—if the State will help to finance an eligible student's college learning, perhaps it should also help to finance valuable learning by college-eligible persons in other environments. The report proposes that the system be tried on an experimental basis for 4 years with 30 interns and 1 or more cooperating employers.

SUBJECT AREA(S)

Subject areas are skills and attitudes that foster on-the-job success in administrative and management level work.

INTENDED USERS AND BENEFICIARIES

The immediate users are persons who develop and analyze education and manpower policy, e.g., business executives, government administrators, and legislators. The ultimate users, when and if the model is applied, are youths 17- to 25-years-old and lower-level business and government executives.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To diminish the practice of credentialism, (2) to increase the amount and quality of on-the-job learning, and (3) to lessen the pressures on college-eligible youths to attend college when such attendance does not actually serve their central vocational needs.

PATTERNS OF USE

The model, if it is fostered with governmental assistance, can be applied by employers to replace the current credential-oriented practices applied by many businesses.

ASSESSMENT PROVISIONS

The model, which is also a proposal for funds to support pilot operation, includes an evaluation design. If the model were eventually put into large-scale operation, assessment would occur as a result of the self-assessing structures built into its design.

TIME REQUIREMENTS

A learner would take 2 to 5 years to complete the recommended cycle.

IMPLEMENTATION PROCEDURES

A trial of the model can be conducted via an experimental grant. If the model were routinely applied, many changes in State laws and business practices would be required.

MATERIALS AND EQUIPMENT

Summary Cost Information

The annual cost per trainee would be approximately the same as for a typical State university student, about $3,300 per year. Students would each contribute about $700 per year of this figure.

Installation and developmental costs would be minimal compared to operating costs.

ASSURANCES AND CLAIMS

Any pilot model will involve only a small number of trainees who will not be under an extraordinary risk—or at least no more "risk" than faced by the millions of college-eligible American youths who deliberately choose to go directly to work after high school rather than seek an academic credential.

If the model were gradually applied on a large scale and began to absorb one-third of our college-eligible youth population, it would obviously have a number of significant effects. The pros and cons of these effects are hypothetical, especially in view of the fact that the model has not even been tried on a pilot scale. The report does contain an extended discussion of some of the long-range implications of the model.

INFORMATION CURRENT AS OF MARCH 1975 ■

INDIVIDUALIZED APPROACH TO INSTRUCTION AND ANCILLARY MAINTENANCE ACTIVITIES IN FAMILY CORE CURRICULUM

A course specifically designed as a companion to vocational training oriented toward providing "life skills"

This approach is oriented toward providing the so-called "Life Skill" effect and is mandatory for all entering students.

There are four curriculum areas involved: Health education, consumer education, home management, and parent involvement.

Health education is designed to provide students with necessary health education concepts and experiences that are felt to be minimally relevant to their ability to function independent of outside medical assistance except where necessary.

Consumer education provides the student with basic principles of protection from overzealous business persons and with certain basics of money management.

Home management emphasizes nutrition, grooming, and basic home-management principles.

Parent involvement progresses from a basic child-parent interaction course to infant-through-adolescent problems and solutions.

SUBJECT AREA(S)

Ancillary maintenance activities in family core curriculum; specifically, health education, consumer education, home management, and parent involvement are the subject areas involved.

INTENDED USERS AND BENEFICIARIES

This area has been specifically designed as a companion to vocational training, especially in instances where basic home skills are found to be deficient to such an extent that employment and associated socioeconomic opportunities are jeopardized. Obviously, some of the skills taught in family core curriculum are to be found useful with other than disadvantaged students as well. Some suggested beneficiaries are: Rural secondary schools; urban secondary schools; adult or career education—urban disadvantaged, postsecondary schools, vocational or career education centers, and institutions where inmate rehabilitation is in progress.

GOAL(S) OR PURPOSE(S)

The primary purpose of this curriculum is to mobilize and maintain certain personal resources necessary to finding and keeping a job.

PATTERNS OF USE

These courses are designed to provide individualized instruction with the Mountain Plains Learning System format for an average of 4 weeks early in the students' training period. In addition, each of the curriculum areas—consumer education, health education, home management, and parent involvement—provides continuing counseling and advisory service as a particular student demand for this type of service arises.

ASSESSMENT PROVISIONS

In fostering an open-entry/open-exit concept, preentry course tests are administered under controlled conditions in a testing center. Initial diagnoses are made there. Unit-level postcognitive tests, and in some instances performance tests, are given in the instructional areas by instructors and/or aides to determine when a student may proceed to the next learning segment. Student-administered and student-scored (Learning Activity Package) tests occur following each LAP, and final course tests are again given in the testing center.

An external evaluation provides a followup study of Mountain Plains graduates to determine the extent of effectiveness of the family core curriculum instruction.

TIME REQUIREMENTS

The program is designed to allow a maximum of 4 weeks for a student to move through this phase. In actual practice, it is found that faster students are able to negotiate all of the learning activities in a minimum of 2-1/2 weeks, and the slowest individuals do need the maximum of 4 weeks.

IMPLEMENTATION PROCEDURES

Teacher orientation to the philosophy of individualized instruction is necessary for success in using this system. A guide to orientation is contained in the document, *Design for Field Testing of Mountain Plains Curriculum*.

MATERIALS AND EQUIPMENT

Materials are currently incomplete and unavailable. Costs have not been established. At present, the following materials are being developed and/or refined:

- Learning Activity Packages (LAP's)
- Learning Experience Guides (LEG's)
- Course job title pretests and posttests
- Teacher's manual
- Student progress records
- Student work plans
- Administrator's guide to using the Mountain Plains System
- Performance activity list.

Personnel Required for Product Adoption and Implementation

Optimum ratio is considered to be 1 instructor, qualified by background and experience, for each 20 students. One teaching and/or clerical aide is also necessary for each 20 students. Where multiple classes are mutually accessible, 1 aide can provide necessary assistance to 40 students.

Cognitive and performance testing, as well as instructional prescribing, can be managed by the instructor/aide team without the assistance of test center personnel. Initial installation of the Mountain Plains Instructional System should take place in a quasi controlled environment; one person, knowledgeable about this system and its theoretical and functional base, should orient staff and students and then monitor progress of both until insured of its continued success. One such person can manage several instructors and their students.

ASSURANCES AND CLAIMS

Followup studies indicate that students are more competent with regard to family health care and that they retain and value buying and budgeting skills.

INDIVIDUALIZED APPROACH TO INSTRUCTION IN THE BUILDING TRADES AND SERVICES

A curriculum designed for those students planning to enter the building trades

This is an individualized approach to learning cognitively and performance-oriented concepts in a variety of job titles in the building trades. The curriculum was designed and/or selected by crafts persons in the trades for its usefulness to those entering certain trades and produced in the Mountain Plains (MP) format.

In keeping the MP design, the job titles and courses in building trades are open-entry/exit, allow for independent study, and provide the means for students to progress at rates suitable to their abilities and aspiration levels.

There are 10 curriculum areas (CA's) incorporated under the building trades and services heading. Each CA is a job title and provides a background suitable for the student, upon completion, for entry into the labor market in the specific job title area. Each course in the job titles is complete with pretests and posttests, learning experience guides, and learning activity packages which provide students with the vehicle for independent progression throughout the course, and total information concerning objectives, performance criteria, rationale, and procedures for progressing through a given learning segment.

SUBJECT AREA(S)

Career education in the building trades and services.

There are 10 curriculum areas—each a job title and course by definition: Carpenter, electronics assembler, electrical wireperson, plumber, heating systems serviceperson, refrigeration/cooling systems mechanic, appliance serviceperson, radio and TV serviceperson, electric motor repairperson, and draftsperson.

Accompanying each course and unit is a Learning Experience Guide (LEG) which directs the student to the requirements of that learning segment. Included in each LEG is a list of objectives, evaluation requirements, performance criteria, and other information intended to give the student and others a capsule view of the contents of that course or unit.

Criterion-referenced cognitive pretests and posttests accompany each course; cognitive posttests, and in some instances postperformance tests, accompany the units. Each Learning Activity Package (LAP)has a test which is included for student use in determining progress.

INTENDED USERS AND BENEFICIARIES

The learning system was designed specifically for use with rurally disadvantaged students in a residential setting. It is distinguishable from conventional systems by its association with support programs in the Mountain Plains context (e.g., prescriptive foundation education background courses, life skill support courses) and by its individualization. Consequently, it is conceivable that the system could be used in a variety of related settings, specifically: Rural secondary schools, urban secondary schools, adult or career education—urban disadvantaged, postsecondary schools, vocational or career education centers, and institutions where inmate rehabilitation is in progress.

GOAL(S) OR PURPOSE(S)

The system used with each of these courses has been designed to provide students with a solid medium for learning building trades and services entry skills at independent rates of learning, allowing them access to an income-producing mode of living in the quickest time possible.

PATTERNS OF USE

By virtue of their being constructed in modules with varying degrees of interdependence, these courses lend themselves to prescriptive teaching. Learning difficulties are diagnosed, and students are directed into those courses and units necessary to their attainment of prescribed entry-skill levels. The role of the instructor is transformed from a traditional classroom teacher to a "curriculum manager," or a resource person and guidance person. Individual attention to student learning problems and associated problems provides for more professional use of the instructor and a greater degree of professional attention to student needs. For maximum effectiveness, aides and secretarial assistants are provided for detail work; ancillary student accounting, curriculum monitoring, data retrieval, and feedback systems are to be used in conjunction with the courses.

ASSESSMENT PROVISIONS

In fostering an open-entry/open-exit concept, preentry course tests are administered under controlled conditions in a testing center. Initial diagnoses are made there. Unit-level postcognitive tests, and in some instances performance tests, are given in the instructional areas by instructors and/or aides to determine when a student may proceed to the next learning segment. Student-administered and scored

LAP tests occur following each LAP, and final course tests are again given in the testing center.

In addition, curriculum and instructor effectiveness are monitored and evaluated by another dimension of evaluative devices.

TIME REQUIREMENTS

Although time requirements vary with student ability and aspirational levels, a time estimate is used as a guide in scheduling students. This time allotment is readjusted within a student accounting and scheduling system at 6-week intervals, or sooner in unusual instances. Average time, as currently used for these activities, is available down to the LAP level.

IMPLEMENTATION PROCEDURES

Teacher orientation to the philosophy of individualized instruction is necessary to success in using the system. A guide to orientation is contained in another document, *Design for Field Testing of Mountain Plains Curriculum.*

MATERIALS AND EQUIPMENT

Materials are currently incomplete and unavailable. Costs have not been established. At present, the following materials are being developed and/or refined:

Learning Activity Packages (LAP's)
Learning Experience Guides (LEG's)
Course job title pretests and posttests
Teacher's manual
Student progress records
Student work plans
Administrator's guide to using the Mountain Plains System
Performance activity list.

Personnel Required for Product Adoption and Implementation

Optimum ratio is considered to be 1 instructor, qualified by background and experience, for each 20 students. One teaching and/or clerical aide is also necessary for each 20 students. Where multiple classes are mutually accessible, 1 aide can provide necessary assistance to 40 students.

Cognitive and performance testing, as well as prescribing, can be managed by the instructor/aide team without the assistance of test center personnel. Initial installation of the Mountain Plains Instruction System should take place in a quasi-controlled environment; one person knowledgeable about this system and its theoretical and functional base should orient staff and students and then monitor progress of both until insured of its continued success. One such person can manage several instructors and their students.

ASSURANCES AND CLAIMS

Assurances

Research design provides an information feedback loop which insures that a variety of problems which may be encountered by staff and students can be detected and modified for the benefit of continuing curriculum program modification. A copyright search has been conducted in order to determine the extent of contamination of Mountain Plains products by commercial materials. Following the search, a more complete separation of such materials will ensue, allowing for a positive identification of other than Mountain Plains materials and a labeling of such. Building trades and services curriculum has been constructed to preclude biases aimed at ethnic groups or protected groups of any kind.

Claims

Hard evidence to substantiate Mountain Plains Learning System approach remains in a developmental state for the most part. Preliminary readouts based on interviews, questionnaires, and up-to-date subjective reactions indicate a number of significant advantages of this system over those commonly associated with public education. Some examples are: More useful skill training is imparted to more students over a shorter period of time, students express appreciation at knowing what is expected of them before beginning in a learning segment, and early evidence indicates short retention of useful concepts and skills is higher than that in traditionally oriented vocational-technical schools.

A "Preliminary Effects Study" in a state of preparation indicates that students in career education programs prefer "hands-on" rather than paper-oriented curriculums. The Mountain Plains "unified" curriculum approach, where human development rather than mass production is emphasized, is producing vertical and horizontal career mobility in former Mountain Plains students regardless of whether they are employed in work for which they have been trained.

Mountain Plains curriculum forces teacher-student interaction of a type which produces personal and social development in students as well as absorption of subject matter content. Mountain Plains individualization emphasis produces an additional humanizing effect by recognizing variances in learning rate and aspirational level.

The Mountain Plains System, when compared to union-sponsored programs, allows for individual rates of variance. (Union programs are time based; e.g., apprentices spend 1 year at a given activity before being allowed to progress, in spite of ability or lack thereof.)

The Mountain Plains System allows for a closer correlation of cognitive learning to hands-on activities. There is a hands-on reinforcement of cognitive learning during or shortly after classroom learning activities.

A continuing conflict, however, occurs between union restrictions and Mountain Plains objectives. Plumbing, carpenter, and electrical wireperson candidates are faced with the additional hurdle of entering unions when they leave Mountain Plains. Attempts to overcome this problem are receiving continuing attention by Mountain Plains personnel, who are negotiating for a more harmonious relationship with union officials. More success is expected with carpenter and plumber unions than with the electrical union. However, unions have been found to be more receptive to Mountain Plains students than others by virtue of their advanced training as compared to others without the background, and some successes have been realized in Mountain Plains graduates being accepted into trade unions.

Sixty-nine percent of building trades and services students have completed the course to date. Of this population, the average precenter monthly income was $415.15. Average monthly postcenter income within 6 months after graduation was $600. Forty-seven percent of these are reported to be working in jobs for which they were trained or in closely allied forms of work.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 090 008

INDIVIDUALIZED APPROACH TO INSTRUCTION IN AUTOMOTIVE AND SMALL ENGINE REPAIR

A method to teach concepts and manipulative tasks related to the repair of automobiles and small engines

This is an individualized approach to the learning of concepts and manipulative tasks associated with automobile and small-engine repair. It is an open-entry/exit, competency-based method of teaching the most relevant topics in the most efficient cost-beneficial manner. Criterion-reference tests, built in the Mountain Plains Learning Systems format, diagnose learning difficulties, provide a basis for prescriptive instruction, and determine whether a student progresses from one learning segment to the next. Performance tests are used at unit endings and provide the determining factor in student progression from one unit to the next. Time is not usually considered a determining factor.

SUBJECT AREA(S)

Career education in automotive and small-engine repair is the subject area.

INTENDED USERS AND BENEFICIARIES

These curriculum areas were designed for rurally disadvantaged students in a residential setting. Reading levels are controlled, instructions to procedures are concise and often simplified, and theoretical instruction is cut to the basic minimum. Cognitive tests are used, but performance tests are often used in addition to or instead of cognitive tests.

This instructional program can be used by itself. Within the Mountain Plains Total Learning System, this program is accompanied by support programs. The automotive and small-engines curriculum areas would be ideally suited to a variety of settings, specifically: Rural secondary schools; urban secondary schools; adult or career education—urban disadvantaged, postsecondary schools, vocational or career education centers, and institutions where inmate rehabilitation is in progress.

GOAL(S) OR PURPOSE(S)

These curriculum areas have been designed to provide the most necessary learning experiences relevant to securing and keeping a related job.

PATTERNS OF USE

Mountain Plains-designed diagnostic tests aid in the determination of learning segments a student will enter. Further testing provides the means for leaving one unit and beginning another. Learning Activity Packages (LAP's) are available for individual student use. Progress is consistent with individual capabilities. Worksheets are used to set up job-oriented training tasks. Each is directly related to an LAP, which has an objective consistent with the worksheet requirement. Instructors are used in a professional role, in conjunction with secretarial and teaching aides.

ASSESSMENT PROVISIONS

In fostering an open-entry/open-exit concept, preentry course tests are administered under controlled conditions in a testing center. Initial diagnoses are made there. Unit-level postcognitive tests, and in some instances performance tests, are given in the instructional areas by instructors and/or aides to determine when a student may proceed to the next learning segment. Student-administered and student-scored LAP tests occur following each LAP, and final course tests are again given in the testing center.

Because of the nature of automotive and small-engines job titles and tasks, performance tests are used extensively at the unit level. These are the real determinants of student proficiency and provide access to sequencing and eventual attainment of job performing capabilities.

In addition, curriculum and instructor effectiveness is monitored and evaluated by another dimension of evaluative devices.

TIME REQUIREMENTS

Although time requirements vary with student ability and aspirational levels, a time estimate is used as a guide in scheduling students. This time allotment is readjusted within a student accounting and scheduling system at 6-week intervals, or sooner in unusual instances.

INDIVIDUALIZED APPROACH TO INSTRUCTION IN MARKETING AND TOURISM

A set of courses to train students to enter the job market in marketing and tourism

The *Individualized Approach to Instruction in Marketing and Tourism* contains three specific curriculum areas: "Lodging Services," "Food Services," and "Marketing and Distribution."

"Lodging Services" provides training for those who anticipate working in hotels, motels, hostelries, and other forms of guesthouses. This curriculum area consists of 3 courses and 15 units which combine to make up 5 job titles: "Maid," "Supervisory Housekeeper," "Desk Clerk," "Night Auditor," and "Assistant Manager Trainee."

"Food Services" is designed to prepare students for entry into the various types of food preparation jobs. The courses are arranged so that persons who cannot attain managerial status can receive training in other aspects of food-oriented work. This curriculum area consists of six courses and seven units which combine to make up seven job titles: "Restaurant Cook," "Institutional Cook," "Kitchen Supervisor Trainee," "Second Baker," "Bakery Manager Trainee," "Restaurant Manager Trainee," and "Chef Trainee."

"Marketing and Distribution" provides training for persons who anticipate working in jobs unrelated to tourism. Five job titles, supported by 13 courses and 32 units, are available: "Shipping and Receiving Clerk," "Checker-Cashier," "General Salesperson," "Professional Salesperson," and "Mid-Management Trainee."

All the curriculum areas in the approach are open entry/exit and are based on the Mountain Plains Learning System. They are individualized and include criterion-referenced cognitive tests built in the mountain plains format. Performance tests are provided, where appropriate, and are used to determine whether a student is ready to progress from one unit to another.

SUBJECT AREA(S)

Career education in marketing and tourism is the subject area.

INTENDED USERS AND BENEFICIARIES

The learning system was designed for use with rurally disadvantaged students in a residential setting. It is distinguishable from conventional systems by its association with support programs in the Mountain Plains context (e.g., prescriptive foundation education background courses, life skill support courses) and by its individualization. Consequently, it is conceivable that the system could be used in a variety of related settings, specifically: Rural secondary schools; urban secondary schools; adult or career education—urban disadvantaged, postsecondary schools, vocational or career education centers, and institutions where inmate rehabilitation is in progress.

GOAL(S) OR PURPOSE(S)

The curriculum areas under this heading are designed to provide students with training to prepare their entry into the job market in the work associated with marketing and tourism, a major contributor to the economy of the Mountain Plains region.

PATTERNS OF USE

These courses are divided into modules of varying degrees of interdependence. They lend themselves to prescriptive teaching. Learning difficulties are diagnosed, and students are enrolled in courses and units that are necessary for attainment of prescribed entry-skill levels. The role of the instructor is one of a resource and guidance person. Individual attention to student learning problems and associated problems provides for more professional use of the instructor and a greater degree of professional attention to student needs

ASSESSMENT PROVISIONS

In fostering an open-entry/open-exit concept, preentry course tests are administered under controlled conditions in a testing center. Initial diagnoses are made there. Unit-level postcognitive tests, and in some instances performance tests, are given in the instructional areas by instructors and/or aides to determine when a student may proceed to the next learning segment. Student-administered and student-scored (Learning Activity Package) tests occur following each LAP, and final course tests are again given in the testing center. In addition, curriculum and instructor effectiveness is monitored and evaluated by another dimension of evaluative devices.

TIME REQUIREMENTS

Although time requirements vary with student ability and aspirational levels, a time estimate is used as a guide in scheduling students. This time allotment is readjusted within a student accounting and scheduling system at 6-week intervals, or sooner in unusual instances.

IMPLEMENTATION PROCEDURES

Teacher orientation in the philosophy of individualized instruction is necessary for success in using this system. A guide to orientation is contained in the document, *Design for Field Testing of Mountain Plains Curriculum.*

MATERIALS AND EQUIPMENT

Materials are currently incomplete and unavailable. Costs have not been established. At present, the following materials are being developed and/or refined:

Learning Activity Packages (LAP's)
Learning Experience Guides (LEG's)
Course job title pretests and posttests
Teacher's manual
Student progress records
Student work plans
Administrator's guide to using the Mountain Plains System
Performance activity list.

Personnel Required for Product Adoption and Implementation

Optimum ratio is 1 instructor for each 20 students. One teaching and/or clerical aide is also necessary for each 20 students. Where multiple classes are mutually accessible, 1 aide can provide necessary assistance to 40 students.

Cognitive and performance testing, as well as prescribing, can be managed by the instructor/aide team without the assistance of test center personnel. Initial installation of the Mountain Plains Instructional System should take place in a quasi-controlled environment; one person knowledgeable about this system and its theoretical and functional base should orient staff and students and then monitor progress of both until insured of its continued success. One such person can manage several instructors and their students.

AVAILABILITY

Products are to be completed and are under developmental copyright. At present, they are not available to the general public.

INFORMATION CURRENT AS OF MARCH 1975 ■

INDIVIDUALIZED APPROACH TO INSTRUCTION IN OFFICE EDUCATION

A learning system emphasizing training for entry occupations in office education

This product utilizes the individualized approach in training for entry occupations in office education. Students are provided with criterion-referenced pretests that provide diagnosis of learning difficulties and prescriptive assignment to specific courses and units. Completion of a given learning segment depends on satisfactory accomplishment of stated objectives for that segment. The system contains a career-ladder effect—partial completers can enter less demanding job titles. The system provides instructions through use of the learning experience guides, courses, units, and the learning activity packages that are keyed to student performance objectives.

The curriculum contains 16 courses, 69 units, and 322 learning activity packages (LAP's) which together make up 6 job titles. (After receiving this training, students will be capable of performing the tasks demanded of them under actual working conditions in each of the job titles in the program or within subordinate job titles if they are included within a given major job title.)

SUBJECT AREA(S)

The subject area is office education.

INTENDED USERS AND BENEFICIARIES

The learning system was designed specifically for use with rurally disadvantaged students in a residential setting. It is distinguishable from conventional systems by its association with support programs in the Mountain Plains context (e.g., prescriptive Foundation Education background courses, Life Skill support courses) and by its individualization. Consequently, it is conceivable that the system could be used in a variety of related settings, specifically: Rural secondary schools, urban secondary schools, adult or career education—urban disadvantaged, postsecondary schools, vocational or career education centers, and penal and other institutions where inmate rehabilitation is in progress.

GOAL(S) OR PURPOSE(S)

This approach has been designed to provide students with an independent medium for learning office education entry skills by allowing them rapid access to an income-producing mode of living.

PATTERNS OF USE

Subject matter is standardized in the office education courses. This approach has adapted commercially available learning materials and provided the student with an alternative to learning in a conventional classroom organization. Students can, in some instances, complete learning segments independently by using the learning activity packages and other autotutorial devices.

ASSESSMENT PROVISIONS

In fostering an "open-entry/open-exit" concept, preentry course tests are administered under controlled conditions in a testing center. Unit-level postcognitive tests, and in some instances performance tests, are given in the instructional areas to determine when a student may proceed to the next learning segment. Student-administered and scored (Learning Activity Package) tests occur following each LAP, and final course tests are again given in the testing center.

Individualized Approaches to Instruction in Office Education makes greater use of commercially prepared tests than other occupational areas do. There are many good tests available in this area. In addition, it seems that some of the concepts and skills to be learned in the program can better be measured through the use of tests which have been specifically designed to match the content and objectives of these commercially prepared courses.

TIME REQUIREMENTS

Although time requirements vary with student ability and aspirational levels, a time estimate is used as a guide in scheduling students. This time allotment is adjusted within a student accounting and scheduling system at 6-week intervals, or sooner in unusual instances.

Since the product administers many course tests in the instructional area rather than at a test center, a significant amount of student time is spent in a testing mode.

IMPLEMENTATION PROCEDURES

Teacher orientation to the philosophy of individualized instruction is necessary for successful use of this system. A guide for orientation is contained in another document, *Design for Field Testing of Mountain Plains Curriculum.*

RD 090 010

MATERIALS AND EQUIPMENT

Materials are currently incomplete and unavailable. Costs have not been established. At present, the following materials are being developed and/or refined:

- Learning Activity Packages (LAP's)
- Learning Experience Guides (LEG's)
- Course job title pretests and posttests
- Teacher's manual
- Student progress records
- Student work plans
- Administrator's guide to using the Mountain Plains System
- Performance activity list.

Personnel Required for Product Adoption and Implementation

Optimum student-instructor ratio is 15 to 1. Clerical/instructional aides can work comfortably on a half-time basis, with an average student load of 40 per unit.

Cognitive and performance testing can be managed by the instructor/aide team, without the assistance of test-center personnel. Initial installation of the instructional system should take place in a quasi-controlled environment; one person knowledgeable about this system and its theoretical and functional base should orient staff and students and then monitor progress of both until insured of its continued success. One such person can manage several instructors and their students.

ASSURANCES AND CLAIMS

Assurances

Office education graduates are assured a high rate of placement upon leaving the program. They have a high degree of assurance that they will have a higher salary upon leaving than before entering. Also, there is evidence to indicate that their training period will be much briefer than public school counterparts, with similar financial rewards.

Claims

Mountain Plains Research Services Division is beginning to come up with some interesting statistics concerning the future of students who have completed one or more of the office education programs. From a student population of 105 heads of households who entered the program before January 1, 1975, 75 percent completed the course. Of those, 85 percent were found to be working in jobs for which they were trained, or in jobs closely related to such work. The average monthly salary of this group was $331.12 before entering the program and $432.61 within 6 months after completion.

EDUCATIONAL EQUITY

Handicapped

Multicultural/Bilingual Education

Sex Fairness

OVERVIEW

PHILLIP R. JONES
Indiana University
Bloomington, Indiana

The education of handicapped children encompasses programs and services for the mentally retarded, hard of hearing, deaf, speech impaired, visually handicapped, emotionally disturbed (behaviorally disordered), orthopedically or other health impaired, and the learning disabled. Various authors estimate from 10-18 percent of the school-age population have exceptionalities requiring special education. The Bureau of Education for the Handicapped (U.S. Office of Education) estimates that 12 percent (excluding the gifted and talented) are in need of special education. Considering the population of children from birth to age 21, this results in seven to eight million children requiring special education.

Historically, concern for the blind or deaf in the United States led to the establishment of residential institutions to serve their needs in the 1800's. Isolated public day school classes for the handicapped also can be identified around the turn of the century. A slow steady growth continued until the period following World War II when a marked expansion of programs is noted. This expansion was a result of the high percentage of illiterates found in preinduction examinations by the military and the concern for physically and emotionally handicapped veterans as they returned from military service. This influenced a general concern for habilitation and rehabilitation of the physically and emotionally handicapped.

Permissive legislation was approved by many State legislatures during the 1940's and 1950's This legislation basically allowed school districts to operate special education programs and services and receive categorical reimbursements if such programs met minimal standards.

The 1960's saw the advent of mandatory legislation for the handicapped which basically changed the word "may" to "shall" in existing legislation and continued categorical financial reimbursement. Such mandates, however, did not result in all handicapped children receiving service. The State of Michigan mandate is from birth to age 25; several States mandate services for 3- or 4-21, while others use normal school age 5- or 6-21. Since not all children were receiving required services, various parents and organizations have sought judicial relief with great success. The 1972 Pennsylvania consent agreement in a case brought by the Pennsylvania Association of Retarded Citizens and the 1972 decree in Mills v. Board of Education in the District of Columbia have assured the right to an appropriate education for the handicapped at public expense. Both of these cases were heard in Federal District Courts and are considered landmark cases in the field. Many other cases on the right to education, evaluation, and placement, and the right to treatment have been or currently are being resolved by the judicial branch of Government.

Dr. Phillip R. Jones is an Associate Professor in the School of Education at Indiana University, Bloomington, Indiana.

Currently, 48 States either have legislative mandates or court orders on the right to education for *all* handicapped children, yet only 50 percent of the population so defined is being served.

Special education has primarily grown up through the "major workhouse" arrangement known as self-contained, full-time special classes. This is inconsistent with the current trend of "mainstreaming" or serving most handicapped children in the regular classroom. This trend in the past few years has resulted from action initiated by individuals who were concerned with the effects of labeling, nondiscriminatory testing and evaluation, and segregation and isolation of the handicapped. The laws and courts speak to the concept of "least restrictive alternative" in serving the handicapped, with preference toward serving the mildly handicapped in the regular classroom with "backup services" available to assist the teacher. Reynolds (1962) proposed a framework for special education services which illustrates the least restrictive alternative concept or a full range of administrative arrangements to serve the handicapped child. The field did not heed Reynolds' words and now is being forced to follow his framework through laws and the courts.

It is indeed unfortunate that the term "mainstreaming" was ever coined. It has created confusion and misunderstanding in many communities throughout the country. The least restrictive alternative is a more easily understood concept. Reynolds' (1962) framework identified the services necessary to serve all handicapped children, beginning with a baseline of the regular classroom where most problems would be served. The levels identified above the baseline were: Regular classroom with consultation, regular classroom with supplementary teaching or treatment, regular classroom plus resource room service, part-time special class, full-time special class, special day school, residential school, hospital school, and hospitals and treatment centers. It was pointed out that most cases could be handled near the baseline or only a few levels above before entering the special class. The less severe cases are served closer to the baseline, while the more severe cases may need service at higher levels of the model. Reynolds' marginal notes are particularly significant wherein he cautioned to move only as far into the range of services as necessary and return as soon as feasible. Unfortunately, these latter two comments were largely ignored in educational programs for exceptional children. In fact, most schools offered no services between the regular class and the special class before the court's decisions.

Melcher (1972) raised many questions about how prepared regular educators and general administrators are to accommodate the handicapped child in the least restrictive environment. He cited the need for preservice and inservice education for general educators to meet the challenge. At the same time the laws and courts call for education for all or the "zero reject concept" as coined by Lilly (1970).

Costs

The financial resources of the schools seemed to have reached a peak and are declining. Research such as Rossmiller et al.(1970) entered the field of cost analysis of programs for exceptional children. When one inspects the indexes identified by Rossmiller, it is obvious that it does cost more to educate a handicapped child than a normal child. It is also obvious that the majority of children currently served are the least costly to serve. The multiple handicapped, severely and profoundly retarded, the seriously emotionally disturbed, etc., require extremely low pupil-teacher ratios and much expensive equipment which inflate the costs. However, one must also consider the cost of other programs in the schools which have low pupil-teacher ratios and other high costs to make fair comparisons with the Rossmiller data. For example, programs such as driver education, fourth-year foreign language, laboratory courses, etc., may in fact have a higher per capita cost than programs for handicapped children. Rossmiller and others who have studied costs of special education programs caution, however, against drawing conclusions based on their exploratory studies.

Federal intervention

Federal involvement in the education of exceptional children has increased slowly over the past 25 years and has been focused in the areas of personnel preparation, research, innovative programs, and aid to States in supporting special education programs (1974). The 93d Congress made it clear that monies appropriated were to be focused on serving the unserved population first and channeled into programs offering the least restrictive alternative environment, individualized planning and instrumentation, and due process procedures. Parental participation at these levels was required.

The introduction of the Education of All Handicapped Children Act during the 93d Congress suggested the need for comprehensive planning and greater financial assistance to the States for the purpose of educating children in "the least restrictive" environment. Although debate on the bill has centered on the funding formula, it is clear that increased Federal initiatives will be taken under this new comprehensive mandate.

Other related activities focus on the trend to deinstitutionalize the handicapped and provide services nearer the handicapped individual's home or community. Nondiscriminatory testing and evaluation have been required by the courts. Many other court cases relate to the field (Abeson et al., 1974; Abeson et al., 1975).

At the same time, the field of teacher negotiations may also impact on the education of exceptional children (Sosnowsky and Coleman, 1971).

Research and development

Studies of the efficacy of special classes show that a child in a special class did not show greater progress than a child remaining in the regular classroom. In many cases special class children did not do as well. Research now must be completed which focuses on children receiving services in the least restrictive environment. One such study, Programed Reentry Into Mainstream Education (PRIME), is currently being conducted by the Bureau of Education for the Handicapped (USOE). Other such studies are needed.

A long-term comprehensive study of financing special education programs is necessary to assist the local, State, and Federal educational agencies as they grapple with the economic issue. Cost analyses of the various administrative arrangements required to serve the handicapped are needed to delineate costs for "appropriate" programs required by the courts and law. Many schools adopted "mainstreaming" (locally defined) to save money, but one must ask if, in fact, children are receiving adequate services.

Research is necessary to determine if the effects of labeling, which were deemed detrimental in special classes, have been reduced or ameliorated.

The NIE has funded through its various programs products that relate to curricular concerns and the instruction of handicapped children as well as products which address the basic issue of the "least restrictive alternative." The product descriptions in the following section describe in greater detail current NIE-funded initiatives in practitioner-oriented research and development.

SWRL SPEECH ARTICULATION KITS

A kit designed to correct four common speech articulation problems found among children in the primary grades

The *SWRL Speech Articulation Kits* provides research-based, school-verified resources for correcting four common speech articulation problems found among children in the primary grades. Kits are available for each of the following: Faulty (th) consonant, (w) for (r) substitution, (l) omission, and frontal and lateral lisp.

The kits increase the number of children who receive systematic and effective therapy by providing the speech clinician with a set of organized materials and methods and with procedures for utilizing the structured assistance of teachers, aides, pupils, and parents in correcting misarticulations.

After screening and testing children, the clinician uses the kit in a three-phase sequence which includes: Working with each child on specific difficulties and evoking the desired sound, training and supervising paraprofessionals to administer exercises in the kit which extend the child's use of the sound in a variety of contexts, and training parents to administer extension exercises in the kit which provide for carryover at home.

The clinician, aides, teachers, parents, and other pupils use the structured materials of the kit to help pupils extend desired sounds to all positions in words, sentences, and spontaneous speech.

Skills practiced in each *SWRL Speech Articulation Kit* include:

Isolation—Pronouncing sound in isolation with a vowel sound

Words: Initial position—Pronouncing words beginning with the sound and then pronouncing words beginning with blend

Words: Ending position—Pronouncing words ending in the sound

Words: Medial position—Pronouncing words with the sound in the medial position

Sentence context—Producing single sentences containing words with the sound in any position

Story context—Using the sound in words while telling stories several sentences in length.

SUBJECT AREA(S)

The kits help clinicians correct speech articulation problems of primary grade children.

INTENDED USERS AND BENEFICIARIES

The kits were developed for use with all pupils who have speech articulation difficulties including: Faulty (th) consonant, (w) for (r) substitution, (l) omission, and frontal and lateral lisp.

Kit resources were designed for the use of speech clinicians in helping children evoke the desired sounds. Carefully structured procedures and materials also facilitate the use of teachers and aides in modifying speech under the supervision of a speech clinician. Additional materials are provided for the use of aides, pupils, and parents in extending the speech sounds developed by the clinician.

GOAL(S) OR PURPOSE(S)

The kits enable children to correctly and consistently produce the desired sounds under a variety of natural speech conditions.

PATTERNS OF USE

Initial work by the clinician with individual children is followed by administration of the articulation modification program and the provision of additional practice using the articulation extension program. Both these sets of materials may be administered by paraprofessionals or parents, under the clinician's supervision.

The sequence of procedures in working with individual children is as follows: (1) Assess and record each child's need, (2) work with each child on specific difficulties, (3) record progress on each skill, (4) assess and record continuous progress, (5) extend practice at school, (6) extend practice at home, and (7) assess and record individual results.

ASSESSMENT PROVISIONS

Pretests, enroute tests, and posttests are provided for frequent assessment and recording of each child's progress.

TIME REQUIREMENTS

Scheduling and time required for phase 1, the initial development of the desired speech sound, varies from child to child. Phase 2, use of the articulation modification program, requires a maximum of 15 20-minute sessions. Use of the articulation extension program, phase 3, requires approximately 20 minutes per day, 5 days per week, for a maximum of 3 weeks.

IMPLEMENTATION PROCEDURES

All resources necessary for screening pupils, for modifying and assessing speech, and for training and supervising paraprofessionals, teachers, and parents are provided. School-verified materials and procedures enable speech clinicians to assume all responsibility for implementing and monitoring the effective use of the kits.

Summary Cost Information

Materials required and their costs are the same for each of the speech articulation kits.

ASSURANCES AND CLAIMS

Assurances

The materials and procedures comprising the product have been designed for convenient use by the teacher with no requirement for specialized personnel. During each of the 3 tryouts involving in the aggregate more than 10 classrooms and 80 pupils, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema. Tryout inquiry procedures have served to assure teacher acceptability and product transportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance in sexual stereotyping, cultural and racial diversity, dangerous substances, and religion.

Claims

Release of the product for commercial distribution requires demonstration that it has been used successfully to obtain prespecified program performance on each of the outcomes. The SWRL quality testing procedures for instructional products, and the criteria against which the instructional product has been evaluated during development, provide this evidence.

To provide a replicable means of insuring that the program continues to function reliably under natural school conditions, apart from SWRL, a set of procedures referred to as quality assurance (QA) has been developed. As the tryout monitoring procedures did for SWRL staff during product development, the QA resources provide regular periodic information on various indicators of instructional accomplishment and program status for each class, school, and district. Such information provides school agencies with quantitative data relevant to program effectiveness and enables them to communicate instructional successes attained through program use to school boards, funding agencies, and other interested groups. Also, individual pupil accomplishments are easily identified and are available for sharing with parents. This information has proved especially useful in furthering parent/school communication and in fostering parental support.

WEEKLY MEAL SEQUENCE PROGRAM (A PROGRAM TO TEACH FOOD PREPARATION SKILLS TO THE RETARDED)

A program to teach food preparation skills to handicapped children

Basic food skills are an important part of everyone's life. They are essential skills to teach to the handicapped as one step on the way to independent living. The *Weekly Meal Sequence Program* is a comprehensive and detailed program to teach preparation of foods to handicapped children. The program is divided into the following sections: (1) A description of the entry skills which the pupil should have prior to working with the weekly sequence, (2) a checklist of the steps in the sequence, (3) an explanation of each step in the sequence, (4) a series of food preparation task analyses, (5) guidelines for preparing further task analyses, (6) a section on data collection, (7) a section on optional motivational programs, and (8) a miniprogram on following directions.

The *Weekly Meal Sequence Program* takes the learner through all steps of food preparation, including balanced meal planning, budgeting, menu preparation, shopping, recipe reading, food preparation, serving, and cleanup.

This program is easily individualized according to the entry skill level of each pupil. The program is carefully sequenced to take pupils from a level of teacher-directed and guided activities to independent and self-directed food preparation. The recipes are presented in varying levels of difficulty with full-picture recipes for the nonreader.

SUBJECT AREA(S)

Home economics, basic life skills: The *Weekly Meal Sequence Program* teaches the skills of basic food preparation.

INTENDED USERS AND BENEFICIARIES

Although this product is designed to be used with the moderately handicapped pupil, aged 10 through adult, the sequence could be useful for those teaching food preparation to pupils of any age or ability. This sequence could be implemented by teachers, aides, or parents.

GOAL(S) OR PURPOSE(S)

The goals of this product are to enable pupils: To be able to plan balanced meals, to budget and shop for necessary food items, to read and follow recipes, and to prepare and serve simple foods.

PATTERNS OF USE

The units of the program are sequential and cumulative, but entry into the sequence is based on pupil ability.

ASSESSMENT PROVISIONS

Student evaluation is built into the program and is a part of the daily activities.

TIME REQUIREMENTS

Because each portion of the program is criterion referenced, timespan depends on pupil entry skills and abilities. The program is designed for daily use, 1/2 hour per day.

IMPLEMENTATION PROCEDURES

The *Weekly Meal Sequence Program* requires access to a kitchen facility and grocery store. No other special equipment is required. Although some of the program can be used in group work, parts are better utilized with individual assessment and teaching for each pupil.

Summary Cost Information

Because the product is still in draft form, cost information cannot be determined

Personnel Required for Product Adoption and Implementation

A classroom teacher or parent without special training may use this material.

ASSURANCES AND CLAIMS

The kitchen is a potential site for accidents with low-functioning children. Kitchen safety rules have been included in the program, and there have been no accidents in the program's initial use.

The program is intended to be used with persons of both sexes. There is no stereotyping of the role of the food preparer.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

Seattle, Wash. 98195

INFORMATION CURRENT AS OF APRIL 1975 ■

LIPPINCOTT'S COMPREHENSION QUESTIONS (SIX BOOKS, D THROUGH I)

A set of books to evaluate students' literal and inferential comprehension skills

Lippincott's Comprehension Questions provides for the daily assessment of students' literal and inferential comprehension in the *Lippincott Basic Reading Series*, 1970 edition, books D through I (grades 1-4). Three types of comprehension questions were written for each 50 running words of text: Recall, sequence, and interpretation. These questions require short written or oral responses. Recall questions deal with facts explicitly stated in the story (for example, "Who lived under the bridge?"). Sequence questions concern the action of the story (for example, "After the goat got over the bridge, what did it do?"). Interpretation questions require many different skills, including translation, inference, and synthesis (for example, "Why did the troll keep letting itself get tricked?"). Book I includes a measure of vocabulary presented in multiple choice format.

The suggested assignment per day is 500 words of oral or silent reading and 1 page of 30 comprehension questions. The time required to complete this assignment is approximately 30 minutes. Suggestions for modification of the program to meet student needs are provided.

SUBJECT AREA(S)

Lippincott's Comprehension Questions is made up of six books, each covering one grade level.

Within each book, the questions are arranged sequentially on the page so that the first question of each type deals with information from the beginning of the reading assignment, while the last questions of each type pertain to material from the final 50 words of the reading selection.

INTENDED USERS AND BENEFICIARIES

Lippincott's Comprehension Questions is designed to be used by students of all abilities in grades 1-4. This product was developed for intermediate-age, learning-disabled students but has been used successfully with emotionally disturbed, educable mentally retarded, and regular students.

GOAL(S) OR PURPOSE(S)

The purpose of this product is to provide students with daily opportunities to respond to different types of comprehension questions.

PATTERNS OF USE

The comprehension exercises for each story may be used in any order. These questions are designed to be used in conjunction with the *Lippincott Basic Reading Series*. The product is not designed to be instructional in itself. The teacher is encouraged to modify the program in accordance with student needs and to add instructional or reinforcement components where feasible.

ASSESSMENT PROVISIONS

Students are placed in the *Lippincott Basic Reading Series* by means of a modified informal reading inventory developed by and available from the Curriculum Research Classroom. The inventory consists of three 100-word samples of reading from each Lippincott reader and corresponding comprehension questions. Students are assigned to the highest reader in which they attain an average 45-60 correct words per minute, 4-8 error words per minute, and 50-75 percent comprehension. There is no formal testing during instruction. Presumably student evaluation is an ongoing part of the teacher's activities. It is suggested that a student progress to the next higher reading level based upon improved performance or some criterion such as 90 percent comprehension over a 1-week period.

TIME REQUIREMENTS

The product is intended for use approximately 30 minutes daily.

IMPLEMENTATION PROCEDURES

No special training or organizational requirements are necessary for use except the availability of the *Lippincott Basic Reading Series*.

Summary Cost Information

The comprehension questions are available only in sets of eight books each, covering grades 1-4. The materials should be used as a supplement to the *Lippincott Basic Reading Series*, 1970 edition.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training may use this material.

ASSURANCES AND CLAIMS

Lippincott's Comprehension Questions has been used successfully for 3 years at the Experimental Education Unit by the developer and other teachers. The comprehension questions have been disseminated in many areas throughout the Northwest. The developer has received no reports of harm associated with the use of this product. The materials have been used with learning-disabled, emotionally disturbed, mentally retarded, and regular students.

SPECIAL EDITION FOR HEARING-IMPAIRED STUDENTS, 1973 STANFORD ACHIEVEMENT TESTS

A complete achievement test battery adopted for use with hearing-impaired students

This is a complete achievement test battery, adapted for use with hearing-impaired students and standardized on a national representative sample (N=6,873) of hearing-impaired students in special educational programs for the hearing impaired.

The only other normative achievement data for hearing-impaired students was developed in 1959 on the Metropolitan Achievement Test, reading subtest, intermediate level, form B. Thus, this is the first time that a complete achievement testing procedure has been available which allows national normative comparisons to two essential reference groups: First, all normally hearing children (from the norms published with the regular edition), and second, all hearing-impaired children in the United States who are in special educational programs for the hearing impaired.

The special edition includes, as an essential step, a screening procedure for determining the appropriate level for full battery testing, since this cannot be done on the basis of grade assignment as with hearing children. Included also are practice test materials and directions for test administrators, including directions on administering the items in the various communication methods used in the education of the hearing impaired.

Scoring materials for hand scoring are available, as well as machine-scoring services which have been developed in collaboration with the Harcourt Brace Jovanovich (HBJ) Scoring Center in Iowa City, Iowa. The entire project has been undertaken in accordance with the terms of a licensing agreement between Harcourt Brace Jovanovich and the Office of Demographic Studies (ODS).

SUBJECT AREA(S)

The following subject areas are included in the test: Vocabulary, reading A, reading B, reading comprehension, word study skills, mathematics concepts, mathematics computation, mathematics applications, spelling, language, social science, science, and communication comprehension/listening comprehension.

INTENDED USERS AND BENEFICIARIES

Hearing-impaired students in special educational programs, aged 8 or above, are the intended users.

GOAL(S) OR PURPOSE(S)

The goal of this product is to provide accurate assessment of academic achievement, both in comparison to the general hearing school-age population and in comparison to hearing-impaired students across the country.

PATTERNS OF USE

The patterns of use are described in detail in the six administrator's manuals and supplementary materials. Procedures must be followed in a standardized fashion in order to make use of the standardized normative data for score interpretation.

ASSESSMENT PROVISIONS

This product is an assessment device for measuring school achievement. The screening procedures mentioned above and described in detail in the materials are an essential part of the testing procedure.

TIME REQUIREMENTS

Administration time for individual subtests ranges from 20 to 35 minutes. Total testing time for a complete battery ranges from approximately 3 hours to a maximum of approximately 5 hours. Administration is done in periods of no more than about 1 hour at a time, with liberal rest periods, and is generally conducted over the course of 3 or more class days.

IMPLEMENTATION PROCEDURES

No special equipment, facilities, or services are required. Only ordinary classroom and desk space, plus testing materials, pencils, and a clock or timer are required. The test is meant to be administered by classroom teachers who have prepared themselves by a careful reading of the directions for administering, and supplementary materials.

Children must be grouped according to test level being administered, which is determined by the screening procedure. This may require groupings other than the usual class groupings, since test levels are not to be determined on the basis of class or grade assignments.

Personnel Required for Product Adoption and Implementation

Test administration requires one prepared administrator per group of students, usually the classroom teacher. Scoring may be done by hand, by clerical personnel, or by machine through the Harcourt Brace Jovanovich Scoring Center in Iowa City, Iowa.

Summary Cost Information

Complete lists of materials, prices, and ordering information are contained in the sample sets. Scoring services are available only from the HBJ scoring center. Information about the scoring services, the scoring order forms, and all test materials are available only from the Office of Demographic Studies.

ASSURANCES AND CLAIMS

The purpose of the development of the SAT-HI was to provide a testing procedure for the hearing impaired as closely parallel as possible to the regular SAT, with only those differences necessary to provide accurate measurement for hearing-impaired students. This has been done to the best of the ability of the staff responsible, and this procedure is therefore as fair, harmless, and replicable as the regular SAT upon which it is based.

This test is the result of extensive previous developmental work, spanning a time period of 7 years, and testing results from over 30,000 hearing-impaired students in 2 national and 1 regional testing programs. The entire developmental process has been conducted in full public view and with the continuous input of a nationally representative group of educators, researchers, and others interested in the welfare of hearing-impaired people. This includes at least all the annual meetings of the National Advisory Committee since 1969, the special conference conducted by ODS on December 1, 1972, and the three regional workshops conducted by ODS during the 1973-74 school year. In addition, technical consultants were utilized, including the senior author of the SAT, Richard Madden. Detailed description of the developmental procedures is available upon request. This material was to be published, but the termination of funding makes the likelihood and time schedule for such publication unpredictable at present.

LINGUISTICS AND THE LANGUAGE OF DEAF CHILDREN

A text introducing transformational syntax to teachers of deaf children

The text is intended as an introduction to transformational syntax for teachers of deaf children or those who are training to be teachers. The book includes an introduction; seven chapters dealing with various aspects of syntax, each divided into sections of theoretical description and research applications; a final chapter, "Linguistics and the Language of Deaf Children"; appendixes on morphology and recent research findings; and a glossary of terms. The book may be used as a supplementary text in a college-level course or as a self-contained introduction to the subject for teachers studying on their own.

Although many introductory transformational grammar texts are available, most are esoteric and unrelated to practical English-teaching situations, while at the same time spreading their content over many diverse areas. On the other hand, most are based on older, sometimes outdated, linguistic frameworks. This text is an attempt to provide the teacher with the basic concepts of the relatively new and extremely important field of transformational-generative grammar and to relate these concepts to the task of teaching language to deaf students, while at the same time restricting itself to the important area of syntax so that concentration is possible.

The book is based on the premise that the theory of transformational grammar has importance in helping students acquire facility in an active, open-ended language system, as opposed to memorizing a limited number of "frozen" sentence patterns.

The reader may study at an individual rate and may vary sequencing to some extent, although there is some overlap between chapters. An inclusive index and bibliography also make the book well suited for review.

SUBJECT AREA(S)

Teacher education pertaining to teacher training in transformational grammar and its relationship to the teaching of deaf children is the subject area.

INTENDED USERS AND BENEFICIARIES

The book was written for teachers and teacher trainees.

GOAL(S) OR PURPOSE(S)

The goal of the book is to provide teachers of deaf children with information and knowledge about transformation grammar so that they can improve their skills in teaching language.

PATTERNS OF USE

Although there is a slight amount of back referencing, the chapters are basically independent. The book can be used in introductory transformational grammar courses and can also be used for review. It has a comprehensive table of contents, an index, and a glossary of terms. It could supplement a college course in linguistics or could be used on its own for individual study. It is self-contained.

HANDICAPPED

RD 100 006

THE TRAINING PROGRAM FOR PARENTS AND THERAPISTS OF AUTISTIC CHILDREN (PART OF THE INSTRUCTIONAL SYSTEMS PROGRAM)

A program to develop instructional programs to remedy the behavioral and learning disorders of autistic children

The work with severely disturbed children is intended to develop and test a set of instructional procedures that a parent or therapist can use to remediate the behavioral and learning disorders of autistic children and to educate them to the point where they can participate and learn in either a regular or a special school situation. This work with autistic children is designed to develop and evaluate general teaching procedures and curriculum materials that will become part of an overall teaching system for disturbed children.

The training program is in the form of a series of 13 written units. Each specifies detailed procedures to follow in accomplishing specific behavioral objectives in educating autistic children. These training manuals are written in a format which is easily followed by professional therapists and by many parents. The 13 units of the training program are: "An Introduction," "Data Taking," "Disruptive Behavior," "Simple Manipulative Tasks," "Motor Imitation," "Functional Speech," "Classroom Management," "Spontaneous Vocalizations," "Phoneme Expansion," "Verbal Imitation," "Syntax Acquisition Through the Use of Rebus Cards," "Initial Group Experience," and "Intermediate Group."

SUBJECT AREA(S)

Behavioral analysis, language acquisition, perceptual and motor development, social skills, health, and physical education are subject areas included.

INTENDED USERS AND BENEFICIARIES

Professional therapists (social workers, psychologists, teachers) parents, and autistic and severely disturbed children are the intended users.

GOAL(S) OR PURPOSE(S)

The major goal is to develop a set of instructional procedures that a parent or therapist could use to remediate the behavioral and learning disorders of autistic children.

PATTERNS OF USE

Units are sequential and cumulative.

ASSESSMENT PROVISIONS

Baseline data are collected by trained observers before instruction begins. Daily observations on particular behavior are made by the teacher or trained observer.

TIME REQUIREMENTS

A trainee should require no more than 20 weeks in a practicum setting to complete instruction.

IMPLEMENTATION PROCEDURES

Careful guidelines of implementation procedures are provided in the training manual.

ASSURANCES AND CLAIMS

Assurances

While no absolute assurances of harmlessness can be made for this product, it can be said that all phases of the training were conducted with parental consent and approval. Parents who were not satisfied with either the training or the progress of their children could withdraw from the program at any time, and several did. Throughout the training, weekly or biweekly conferences were scheduled with each participating parent. In addition, an observation room was set up so that parents could monitor actual training procedures whenever they chose.

Training was not differentiated by sex or race. The intent of the program was to dispel widely accepted stereotypes about autistic children, such as noneducability and nonresponsiveness to group instruction.

The program is not intended to be used alone. While the training manuals are written in a format which may be followed by professional therapists, the procedures cannot be recommended for parental use without supervised instruction and assistance.

With the ending of research activities associated with this product, a center for autism was formed under the initiative of a program staff member and several parents whose autistic children had received training. This group established a board of directors, a professional advisory committee, and has obtained the sponsorship of the Judevine Foundation. The teaching procedures developed for autistic children and the training program for parents and therapists have thus been spun off and are now the responsibility of an independent agency.

Claims

Before/after comparisons were made for autistic children who had been in training for at least 8 months. The comparisons were on four general classes of behavior—friendliness, speech, autistic seclusion, and illicit attention-getting behavior. The progress of children in overcoming these problems varied dramatically with the age at which they started training. The malleable age seemed to be 5 years or younger; nearly all of the children who started after turning 6 made, at the most, only fair progress. Improvement was especially evident for children under 6 whose mothers had developed high levels of competence in using the program.

The training program also seems to work best with autistic children who are initially highly disruptive, destructive, and aggressive as compared to children who are initially more placid.

CONFIGURATIONS OF CHANGE: THE INTEGRATION OF MILDLY HANDICAPPED CHILDREN INTO THE REGULAR CLASSROOM

Validated approaches to "mainstreaming"

As a result of a thorough survey and indepth study of existing mainstreaming efforts in school districts across the country, Kreinberg and Chow invited 20 innovative educational practitioners to contribute to the final edition of *Configurations of Change*. Several specific "successful" or "validated" approaches to mainstreaming are discussed in detail; the major focus of the product is upon broader issues and problems within the whole movement and upon programs that confronted these problems and attempted solutions that offer the most flexibility to educators. The authors analyze four problem areas common to all mainstreaming programs: Legal constraints, teacher preparation, instructional arrangements, and accountability procedures. These issues are examined in analytical papers and narratives of selected programs.

SUBJECT AREA(S)

The subject area is special education; specifically, mainstreaming.

INTENDED USERS AND BENEFICIARIES

The intended users are teachers, administrators, and students interested in, or responsible for, programing in special education, particularly in mainstreaming certain handicapped children into regular classes.

GOAL(S) OR PURPOSE(S)

The purpose of this product is to inform readers about some key issues in mainstreaming and to alert readers to the existence of mainstreaming programs in special education.

ASSURANCES AND CLAIMS

The materials were tested with users and found to be valuable.

INTEGRATING HANDICAPPED CHILDREN INTO REGULAR CLASSROOMS (WITH ABSTRACT BIBLIOGRAPHY)

A discussion of the desirability of integrating handicapped children into regular classrooms

This paper, based on an interview with Jennie Klein, director of educational services, Office of Child Development, stresses the desirability of integrating handicapped children into regular classrooms. Teachers are urged to view the handicapped child as a normal child with some special needs. Specific suggestions for the teacher are given: (1) Learn the details about handicaps that may be encountered; (2) work supportively with parents and find out as much as possible about the child; (3) arrange for the child's gradual transition into a classroom setting; (4) be aware of the range of normal behavior for the age group involved; (5) have positive but realistic expectations and focus on the child's strengths; (6) enforce the rules and limits of the class; (7) deal with the other children's reactions to the handicapped student; and (8) acknowledge personal feelings, attitudes, and levels of frustration. A short abstract bibliography on exceptional children is included.

INTENDED USERS AND BENEFICIARIES

This program is designed to help teachers and aides in preschool and elementary school settings who are beginning to integrate handicapped children into their classrooms. It is also instructional for school administrators and center directors responsible for facilitating this process.

GOAL(S) OR PURPOSE(S)

The purpose of this paper is to supply needed information on mainstreaming handicapped children to teachers and child care workers inexperienced in working with exceptional children. Recent State legislation and Head Start program requirements have sharply increased the need for information in this area.

PARENTS AS TEACHERS: A RATIONALE FOR INVOLVING PARENTS IN THE EDUCATION OF YOUNG HANDICAPPED CHILDREN

A review describing a set of adverse factors that may hamper the development of the handicapped child

This review describes a set of adverse factors that may hamper the development of the handicapped child and contribute to cognitive dysfunction. A cumulative intellectual deficiency and an impairment in the affective aspects of the mother/child relationship operate in a mutually reinforcing manner to produce a negative effect on the child's overall development. It is suggested that remediation requires early intervention, the involvement of parents (particularly mothers), and extensive guidance and curricular aid to parents.

Subjects discussed in this paper include: (1) Parent involvement in the education of their young handicapped children, (2) home-based programs for handicapped children, (3) factors contributing to cumulative intellectual deficiency in the handicapped child and impairment of mother/child relationship, (4) motivational problems, and (5) cognitive development.

SUBJECT AREA(S)

The subject areas include parental involvement in the education of their young handicapped children, home-based programs for handicapped children, factors contributing to cumulative intellectual deficiency in the handicapped child and impairment of mother-child relationship, motivational problems, and cognitive development.

INTENDED USERS AND BENEFICIARIES

This paper was designed for educators and administrators responsible for planning and implementing programs for handicapped children and their parents.

GOAL(S) OR PURPOSE(S)

The purpose of this paper is to highlight the urgent need for parent participation in the education of their young handicapped children and the equally urgent need for planning and implementing programs which offer long-term guidance and direction for these parents.

UNDERSTANDING YOUNG CHILDREN: EMOTIONAL AND BEHAVIORAL DEVELOPMENT AND DISABILITIES

A booklet for training regular preschool teachers who work with emotionally and behaviorally handicapped children

This booklet offers teachers, paraprofessionals, and parents practical, easy-to-read suggestions to help them understand emotional and behavioral development and disabilities in young children. Through a variety of examples, the booklet emphasizes techniques that show the teacher how to encourage and assist the young child to move toward emotional maturity and self-discipline. This guide should prove helpful in training teachers and caregivers who work with handicapped children in a regular classroom. Cartoon-style drawings illustrate the text.

Subject areas discussed in this booklet include: Emotional and social development of preschool children; young children's behavior problems; teaching methods and the teacher's role; student-teacher relationship, discipline, and the student's self-concept; psychological patterns and social maturity; and regular class placement of the handicapped child.

INTENDED USERS AND BENEFICIARIES

This booklet is designed to be used in training teachers and aides who work with emotionally and behaviorally handicapped children in their regular preschool classrooms. It would also be of interest to early childhood directors and administrators and parents of handicapped children.

GOAL(S) OR PURPOSE(S)

The product's goal is to supply needed information on mainstreaming handicapped children to teachers and childcare workers inexperienced in working with exceptional children. Recent State legislation and Head Start program requirements have sharply increased the need for information in this area. The booklet also provides some general ideas on the emotional and behavioral development of children.

UNDERSTANDING YOUNG CHILDREN: LANGUAGE DEVELOPMENT AND LANGUAGE DISABILITIES

A booklet for training teachers and aides who work with children with language disabilities in their regular classrooms

This booklet offers practical, easy-to-read suggestions for teachers, paraprofessionals, and parents to help them understand language development and language disabilities. The first section highlights some of the factors involved in language development. The second section deals with some of the common causes for language disabilities and provides numerous suggestions for appropriate language activities. Cartoon-style drawings illustrate the text. This booklet should be especially helpful in the training of teachers and caregivers who work with handicapped children in a regular classroom.

Subjects discussed in this booklet include regular class placement of young children with language handicaps, early childhood language development and language activities, language patterns and auditory discrimination, and speech improvement and teaching methods.

INTENDED USERS AND BENEFICIARIES

This booklet is designed to be used in training teachers and aides who work with children with language disabilities in their regular classrooms. It would also be of interest to early childhood directors and administrators and parents of handicapped children.

GOAL(S) OR PURPOSE(S)

The product's goal is to supply needed information on mainstreaming handicapped children to teachers and child-care workers inexperienced in working with exceptional children. UNDERSTANDING YOUNG CHILDREN: LEARNING DEVELOPMENT AND LEARNING DISABILITIES

A booklet for training teachers and aides who work with children with learning disabilities in their regular classrooms to recognize how the factors of heredity, maturation, and environment determine the degree of development an individual will achieve

This booklet offers practical, easy-to-read suggestions for teachers, paraprofessionals, and parents to help them understand learning development and learning disabilities. The text outlines how the factors of heredity, maturation, and environment determine the degree of development an individual will achieve. The characteristics of children with learning disabilities are described, and a number of special techniques to assist children in overcoming these disabilities are discussed. This text should prove especially helpful in the training of teachers and caregivers who work with handicapped children in regular classrooms. Cartoon-style drawings illustrate the text.

Subjects discussed in this booklet include: Regular class placement of young children with learning disabilities, early childhood learning activities and development tasks, cognitive development and multisensory learning, teaching methods and teacher role, student-teacher relationship, environmental influences, and maturation and self-concept.

INTENDED USERS AND BENEFICIARIES

This booklet is designed to be used in training teachers and aides who work with children with learning disabilities in their regular classrooms. It would also be of interest to early childhood directors and administrators, and parents of handicapped children.

GOAL(S) OR PURPOSE(S)

The product's goal is to supply needed information on mainstreaming handicapped children to teachers and child-care workers inexperienced in working with exceptional chidren. Recent State legislation and Head Start program requirements have sharply increased the need for information in this area. The booklet also provides some general ideas on the development of learning processes in children.

UNDERSTANDING YOUNG CHILDREN: INTELLECTUAL DEVELOPMENT AND INTELLECTUAL DISABILITIES

A booklet for training regular classroom teachers and aides who work with children with intellectual disabilities

This booklet offers practical, easy-to-read suggestions for teachers, paraprofessionals, and parents to help them understand intellectual development and intellectual disabilities. The first section highlights some of the factors involved in intellectual development and the importance of being sensitive to different stages of learning. The second section deals with the intellectual disabilities and suggests a variety of learning activities to enhance development. The role that the teacher plays in fostering intellectual development is emphasized. The booklet should prove helpful in training teachers and caregivers who work with handicapped children in a regular classroom. Cartoon-style drawings illustrate the text.

Subjects discussed in this booklet include regular class placement of young children with mental disabilities; comprehension, memory, classification, and concept formation; teaching methods and student-teacher relationship; affective behavior and self-concept; and learning processes and intellectual development.

INTENDED USERS AND BENEFICIARIES

This booklet is designed to be used in training regular classroom teachers and aides who work with children with intellectual disabilities. It would also be of interest to early childhood directors and administrators and parents of handicapped children.

GOAL(S) OR PURPOSE(S)

The product's goal is to supply needed information on mainstreaming handicapped children to teachers and child-care workers inexperienced in working with exceptional children. Recent State legislation and Head Start program requirements have sharply increased the need for information in this area. The booklet also provides some general ideas on the development of intelligence in children.

UNDERSTANDING YOUNG CHILDREN: THE HANDICAPPED CHILD IN THE NORMAL PRESCHOOL CLASS

A booklet for training teachers and aides who work with aurally, visually, and physically handicapped children

This booklet offers teachers, paraprofessionals, and parents practical, easy-to-read suggestions for working with the handicapped child in the normal preschool class. Each of the three sections (visual disabilities, hearing disabilities, and motor disabilities) emphasizes the importance of a warm, positive, accepting attitude on the part of the teacher. The text provides basic knowledge concerning visual, auditory, and motor disabilities, and includes a number of suggestions for integrating the handicapped child into the normal classroom routines. This text should prove especially helpful in the training of teachers and caregivers. Cartoon-style drawings illustrate the text.

Subject areas discussed in the booklet include: Regular class placement of the young handicapped child; teaching methods to be used with physically, visually, and aurally handicapped children; early childhood learning activities; audiolingual skills; classroom environment and student adjustment; and teacher role and student-teacher relationship.

INTENDED USERS AND BENEFICIARIES

This booklet is designed to be used in training teachers and aides who work with aurally, visually, and physically handicapped children in their regular preschool classrooms. It would also be of interest to early childhood directors and administrators, and parents of handicapped children.

GOAL(S) OR PURPOSE(S)

The product's goal is to supply needed information on mainstreaming handicapped children to teachers and child-care workers inexperienced in working with exceptional children. Recent State legislation and Head Start program requirements have sharply increased the need for information in this area.

P

OVERVIEW

SUSAN STAIRS
National Institute of Education
Washington, D.C.

The public school has long been regarded as a major cultural institution for assimilating the diverse ethnic groups in America. Until the mid-sixties, the predominant metaphor for describing American culture was the "melting pot." The public school was seen as the vehicle for teaching and absorbing diverse ethnic groups into the mainstream of American culture. While this view of assimilation in public education still has many adherents, the latter part of the 1960's witnessed the development of a trend toward cultural pluralism in education. In contrast to the view of assimilation, adherents of pluralism emphasize teaching both the native (nonmainstream) language and culture in education and the mainstream language and culture. They have stressed a multicultural approach in education for preserving the language, lifestyles, customs, and values of the child's native culture. Their metaphor characterizing American society is the "tossed salad" concept, not the "melting pot." Adherents of cultural pluralism emphasize the advantages of bringing diverse cultures together in an educational setting. The appreciation of different cultural heritages enriches the educational experience for both minority and majority children.

Although there is agreement among Federal, State, and local educational agencies on the need for supplementary services for culturally different children, there is some disagreement on the goals of such programs and the methods to be used to achieve these goals. Goals of assimilation and pluralism affect decisions about objectives and procedures for teaching culturally different children. Programs oriented toward assimilation usually seek to teach culturally or linguistically different children the cognitive, affective, and psychomotor skills required to function in the mainstream culture. Programs oriented toward pluralism seek to teach children the skills necessary to function in both the mainstream culture and their native culture. Proponents of pluralism argue that linguistically or culturally different children are enriched by learning about their original culture and that learning about their native culture can complement and enhance their learning about the mainstream American culture. They also argue that society benefits from input from a variety of life goals and lifestyles that are retained through this approach to Multicultural/Bilingual Education.

Methodological questions relating to specific techniques and approaches to teaching are influenced by the emphasis on either assimilation or pluralism in the multicultural/bilingual program. Programs emphasizing mainstream culture tend to be taught entirely in English. In the pluralistic approach, on the other hand, primary instruction is often in the child's native language, emphasizing the cultural/linguistic heritage of the student.

Ms. Susan Stairs is an Educational Program Specialist in Educational Equity, Multicultural/Bilingual Group, at the National Institute of Education, Washington, D.C.

R & D needs

Despite the controversy between the proponents of assimilation and pluralism, programs for culturally and/or linguistically different children are in need of research and development that address the following issues:

- The identification of instructional methods and materials appropriate for culturally and/or linguistically different children.
- The development of staff training techniques which will enable administrators and teachers to better understand the cognitive and affective needs of culturally and/or linguistically different pupils.
- The development of measures which identify teacher attitudes and behaviors that foster achievement on the part of culturally and/or linguistically different children.
- The development of norm-referenced as well as diagnostic/prescriptive methods to measure the achievement of linguistically and/or culturally different pupils and to assess the effectiveness of multicultural/bilingual programs.

NIE program efforts

These issues have guided NIE in the development of its multicultural/bilingual program. A discussion of some of the more important NIE research and development activities with a multicultural/bilingual purpose follows. The discussion is organized around three issue areas: Instructional materials, assessment instruments, and staff development techniques.

Instructional materials.—An extensive number of instructional materials designed for bilingual/bidialectical pupils have been developed. The Southwest Educational Development Laboratory (Austin, Texas) has produced a series of comprehensive instructional units that encourage simultaneous development of Spanish and English oral and written language skills. The entire multimedia package includes curriculum and staff development materials designed to teach concepts and skills to enable children to function in both native and mainstream culture. The Alaskan Reading and Language Development program at the Northwest Regional Educational Laboratory (Portland, Oregon) has produced a series of culturally relevant readers for Native Alaskan children. NWREL has also produced a variety of language arts materials for children based on the culture and traditions of the Plains, Plateau, and Coastal Indian tribes of the Northwest. Instructional materials have been developed at Central Midwestern Region Educational Laboratory (St. Louis, Missouri) that foster the acquisition of standard English by children who speak black dialects. These programs are all aimed at imparting both mainstream and native culture with the ultimate purpose of enhancing the child's capacity to function in both cultures.

To assist teachers in bilingual programs make more informed choices in instructional materials selection, the Educational Products Information Exchange (New York, New York) is developing a catalog of bilingual curriculum materials which will be a compilation and assessment of about 1,000 items in the Spanish, Chinese, Japanese, Korean, and Vietnamese languages.

Assessment instruments.–Several NIE products have been concerned with the development of assessment instruments for multicultural/bilingual programs. Bilingual and bidialectical balance tests to be used in measuring the language ability of linguistically different children are under development at the Stanford Center for Research and Development in Teaching (Stanford, California). The completed package of test materials will include instruments to measure teacher attitudes towards linguistically different students. Criterion-referenced tests have been the focus of research and development at the Southwestern Cooperative Educational Laboratory SWCEL (Albuquerque, New Mexico) and the Center for the Study of Evaluation CSE (los Angeles, California). SOBAR-Espanol is a criterion-referenced measurement system for assessing reading in Spanish developed at CSE. The SWCEL Performance Objective Package is designed to assess the cognitive, affective, and psychomotor development of children.

Staff development.–Several NIE products are targeted to expanding teacher awareness of the learning styles of culturally and/or linguistically different pupils and to help teachers identify instructional approaches appropriate for these students. The Far West Laboratory for Educational Research and Development (San Francisco, California) has produced a teacher training unit that seeks to enhance teachers' multicultural awareness and interaction skills. The Alaska Satellite Demonstration project has produced inservice training programs appropriate for rural Alaskan teachers. Similarly, the Bilingual Early Childhood Program has developed training materials for both preservice and inservice teachers working with Spanish-speaking students. While many of these curriculum and training materials are completed and are currently being disseminated across a wide range of sites, others are still being field tested.

The following section provides descriptions of the various NIE-supported products that are specifically designed to enhance the educational achievement of the many ethno-linguistic minorities in the country.

TEACHER INSERVICE TRAINING PROGRAM (PART OF ALASKA SATELLITE DEMONSTRATION PROJECT)

A series of video programs which provides information on teaching techniques for teachers in rural Alaska

The *Teacher In-Service Training Program* consists of 32 video programs, each approximately 20-30 minutes long. The series includes five segments of Rudolph Dreikurs' lecture series "Motivating Children To Learn." The remaining programs in the series consist of instudio discussion on various aspects of education in Alaska, involving an oncamera hostess, guests, teachers, and slide presentations.

This program series provides information on teaching techniques relevant to rural Alaskan teachers. Video presentation of these materials was chosen as the best means of wide distribution to teachers in isolated rural Alaskan communities.

Implementation of this program series requires teacher viewing of the video programs for possible implementation of described teaching techniques as they apply to each individual teacher's needs and resources.

Sample Lesson

The hostess introduces three teachers from the Juneau school system who are planning a 2-day "Days of '98" camping experience for an 8th-grade social studies class. Their idea is to simulate a town of 1898, with laws, hard working conditions, and inflated prices. The students arrive at the camp as "immigrants" who must find jobs to earn enough in the currency of the camp to pay for their meals and a place to stay, all the while dealing with the established laws and "authorities" of the town. Slides are shown of the teachers and class discussing the idea of the camp. The hostess then interviews two students after the camp is over for their reactions and experiences. Slides of the camp in operation are shown and explained. The three teachers then return, after the camp has taken place, to discuss their reactions to the experience with the hostess.

SUBJECT AREA(S)

Using community resources in the school, Alaska multimedia education, open classrooms, and special education are the subject areas.

INTENDED USERS AND BENEFICIARIES

The intended users of this product are elementary, secondary, and administrative educators in rural Alaska.

GOAL(S) OR PURPOSE(S)

The goal of the program is to distribute information on teaching techniques relevant to educators in rural Alaska.

PATTERNS OF USE

The series can be seen in any order.

ASSESSMENT PROVISIONS

No formal evaluation procedures for the series have been implemented. As originally broadcast via satellite, each program included time for interaction via radio between program host and/or guests and village viewers. This feedback and viewer suggestion were directly responsible for selection of some of the subsequent program content.

TIME REQUIREMENTS

Each of the 32 programs is less than 30 minutes. If the program were viewed once a week, the program series could be seen in 32 weeks.

IMPLEMENTATION PROCEDURES

Use of the series requires a program video tape cassette, video tape recorder, and television monitor situated in a room suitable for accommodating viewers.

Summary Cost Information

Cost to implement this program series consists of the original purchase price of a video tape recorder and television monitor. Installation of video equipment requires no special technical knowledge or additional cost. Distribution of the video tape cassettes will be on a circulating basis, upon request, and at no cost to users. By supplying the distributor with blank video tape cassettes, the user could acquire the video tape series permanently, at no additional cost.

ASSURANCES AND CLAIMS

The series provides a variety of teaching techniques based on both educational theories and actual experiences of teachers in Alaska. The series was designed with the recommendations of a task force with representatives from a wide variety of educational organizations in Alaska.

The developers and producers have not received any reports of harm associated with the use of this product. Every effort is made to eliminate any form of social bias, ethnic or sexual stereotypes, or inappropriateness of content.

This series can be used effectively in rural areas with specified video tape equipment without developer assistance of any kind.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Program video tape cassette	1 per viewing			
Video tape recorder	1 per viewing	1,500.00	5 years	Any commercial supplier
TV monitor	1 per viewing audience	600.00	5 years	Any commercial supplier

DEVELOPER/AUTHOR:

Office of Telecommunications
State of Alaska
Pouch AC
Juneau, Alaska 99801

Charles M. Northrip, Satellite Experiment Coordinator

AVAILABILITY

The complete 32-program series will be available for distribution on video tape cassettes in summer 1975 from:

Alaska State Library
Pouch G
Juneau, Alaska 99801

ALASKA NATIVE MAGAZINE PROGRAM (PART OF THE ALASKA SATELLITE DEMONSTRATION PROGRAM)

A series of video programs, each designed around a specific topic, relevant to Alaska's adult Native population

The *Alaska Native Magazine Program* consists of thirty-two 60-minute video programs. Each program is designed around a specific topic currently relevant to Alaska's adult Native population. A Native Alaskan program host combines commentary, instudio interviews, and taped excerpts filmed on location throughout the State, as well as news of activities, events, and people from Alaskan villages.

Alaska Native Magazine Program is an experiment in developing informative and relevant discussion on topics uniquely of interest to rural adult Native Alaskans, television programing which is not otherwise available to the widely scattered and culturally diverse target population.

SUBJECT AREA(S)

Subject areas include Native land claims, consumer information and protection; pipeline impact; white/nonwhite cooperation; limited entry fisheries; rights and responsibilities; education in rural Alaska; native corporations; and changes in Alaska.

INTENDED USERS AND BENEFICIARIES

The intended users are adult Native Alaskans living in rural communities and villages.

GOAL(S) OR PURPOSE(S)

The major goals of the program are: (1) To communicate to the village people changes in Alaska as they happen; (2) to document and record the processes by which change is occurring; and (3) to film Native Alaskans involved in the change—by so doing, to inform, educate, and entertain.

PATTERNS OF USE

The programs can be presented in any order.

ASSESSMENT PROVISIONS

No formal evaluation procedures for the program have been implemented. As originally broadcast live via satellite, each program included time for interaction via radio between program host and/or guests and village viewers. This feedback and current viewer evaluation were directly responsible for selection of subsequent program content.

TIME REQUIREMENTS

Each of the 32 programs is 60 minutes in length. Viewed once a week, the program series could be seen in 32 weeks.

IMPLEMENTATION PROCEDURES

Use of the program series requires a program video tape cassette, video tape recorder, and TV monitor, situated in a room suitable for accommodating viewers.

Summary Cost Information

Cost to implement this program series consists of the original purchase price of a video tape recorder and TV monitor. Installation of video equipment requires no special technical knowledge or additional cost. Distribution of the video tape cassettes will be on a circulating basis upon request and at no cost to users. By supplying the distributor with blank video tape cassettes, the user could acquire the video taped series permanently, at no additional cost.

ASSURANCES AND CLAIMS

This program series provides indepth discussion by Native Alaskans about topics suggested by and of importance to Native Alaskans in rural communities. The series was designed with the advice and approval of a consumer committee made up of representatives from Native Alaskan regional corporations. Original satellite telecasting allowed the program to be directly responsible to viewer questions, reactions, and interest in selecting subsequent subject matter (via radio interaction during live broadcast). Extensive on-location filming assures that views and lifestyles of Alaska's culturally diverse Natives are well represented.

In both intent and format, the program series respects and promotes the complex and unique ways of life of all the various Native cultures in the State.

While timely and current as originally broadcast, reproduction of this series will include some dated news material as well as subjects whose timely interest may be less than current. On overview, however, the series provides detailed and valuable material on basic issues that remain of interest to Native Alaskans.

The developers and producers have not received any reports of harm associated with the use of this product.

Every effort is made to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content.

This video tape series can be used effectively in rural areas with specified video tape equipment without developer assistance of any kind.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Program video tape cassette	1 per viewing			
Video tape recorder	1 per viewing	1,500.00	5 years	Any commercial supplier

INFORMATION CURRENT AS OF MARCH 1975 ■

HEALTH EDUCATION PROGRAM (PART OF THE ALASKA SATELLITE DEMONSTRATION PROGRAM)

A series of video programs, modeled after "Sesame Street," which gives attention to the health problems of 8- to 10-year-old Alaskan children

The *Health Education Program* consists of thirty-two 3-minute video programs giving special attention to the health problems of 8- to 10-year-old children living in Alaskan villages. Entitled "Right On!" the series gives health lessons in the style of "Sesame Street." The main characters in these programs are a Native woman acting as a health aide, and a "not-so-smart" moose and a "sharp" beaver puppet. The action takes place in a set resembling a health aide's office in a rural Alaskan village. Other puppets illustrate different health concepts.

For each program in the series, the classroom teacher prepares the students with discussion of the subject matter of the program to be seen, as suggested in the teacher's manual. After viewing the program, the teacher conducts discussion and/or activity with students to reemphasize the health concept of the program.

The student participates in previewing discussion, actual viewing of the video tape program, and followup discussion and/or activity based on the program's health topic and its unique application to life in rural Alaska.

Sample Lesson

The lesson on "Environment and Clothing" begins with a classroom discussion of the different types of clothing worn by the students in different seasons of summer and winter. The students list these examples on the blackboard. Afterwards, they watch the video tape program. In this program, the main puppet characters, Rex Moose and Charlie Beaver, discover how their clothing is especially suited to life in Alaska. After viewing, the students again refer to the blackboard list, select four articles of clothing from the winter list, and write an explanation of how each article helps to protect them from illness.

SUBJECT AREA(S)

Health education.

Subject areas include personal hygiene and health habits, frostbite and cold weather hazards, germs, disease, nutrition, dental health, physical fitness, individual differences, and family life.

INTENDED USERS AND BENEFICIARIES

Intended users are 8- to 10-year-old children living in rural Alaska.

GOAL(S) OR PURPOSE(S)

The overall goal of this series is to emphasize to the viewing audience of students the importance of everyday health in their lives and to help them become aware of the kinds of health problems in Alaska.

PATTERNS OF USE

Programs may be presented in any order. The series would be most effective when used in conjunction with classroom discussion and activity, but each program by itself is instructive in health education as it relates to rural Alaskan students.

ASSESSMENT PROVISIONS

Evaluation is left to the individual teachers, with the suggestion that evaluations be based on both the program's detailed objectives (listed in the teacher's manual) and the teacher's own objectives for the students.

TIME REQUIREMENTS

The 32 video programs in this series are under 30 minutes each. (Originally designed for satellite transmission, each program allowed for 10-15 minutes of live audio interaction with viewing villages and students. This portion of each program will not be included in video tape reproductions of the series.) If one program is viewed each week, the entire series could be seen in 32 weeks.

IMPLEMENTATION PROCEDURES

Use of the series requires a program video tape cassette, a video tape recorder, and a TV monitor, situated in a room suitable for accommodating viewers. The program will be most effective if shown to a standard classroom number of students and not a larger group. The teacher's manual developed with the series and a teacher to implement the discussion and activity suggestions are also necessary for full effectiveness of the series.

Summary Cost Information

Cost to implement this program series consists of the original purchase price of a video tape recorder and a TV monitor. Installation of video equipment requires no special technical knowledge or additional cost. Distribution of the video tape cassettes and the teacher's manual will be on a circulating basis from the distributor, at no cost to users. By supplying the distributor with blank video tape cassettes, the user could acquire the video taped series permanently at no additional cost.

ASSURANCES AND CLAIMS

The *Health Education Program* has been produced on an experimental basis to provide informative and entertaining television programing specifically designed to educate rural Alaskan children about good health habits. Emphasis in this series is placed on making settings, content, and characters relevant and understandable to the target group. The Alaska Area Native Health Service and a consumer committee consisting of representatives of Native villages, the Alaska Federation of Natives, and various State agencies joined as policy committees and advisers to assure that the health series did respond to Native Alaskans' needs.

The original program design was based on its use as live satellite transmission to rural Alaska. The last 10-15 minutes of each program allowed for live interaction, via radio, between the program host and the viewing village students. Actual participation by students increases their involvement and empathy with the show's characters. This portion of each program will not be reproduced with the video tape cassettes for distribution, and each program will be less than 30 minutes in length. Originally, each program unit also included a second lesson, a film produced outside Alaska that reinforced the health principles of the first lesson. Only one-time rights to these films were purchased for satellite broadcast, and they will not be available on video tape cassettes. While this lack of interaction and film followup may decrease the intended effectiveness of the series, additional discussion and activity initiated by the classroom teacher should be sufficient for maximum series impact.

The developers and producers have not received any reports of harm associated with the use of this product. Every effort is made to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content.

This video tape series, accompanied by a teacher's manual, can be used effectively in rural areas with specified video tape equipment without developer assistance of any kind.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Program video tape cassette	1 per viewing			
Video tape recorder	1 per viewing	1,500.00	5 years	Any commercial supplier
TV monitor	1 per viewing	600.00	5 years	Any commercial supplier
Teacher's manual	1 per teacher		Reusable

INFORMATION CURRENT AS OF MARCH 1975 ■

BASIC ORAL LANGUAGE DEVELOPMENT PROGRAM (BOLD) (PART OF THE ALASKA SATELLITE DEMONSTRATION PROJECT)

A series of video programs designed specifically to meet the language arts needs of 5- to 7-year-old native Alaskan children

The *Basic Oral Language Development Program* (BOLD) consists of thirty-two 30-minute video programs designed specifically to meet the language arts needs of 5- to 7-year-old native, rural Alaskan children whose first language is not English, and/or whose English is limited to the rudimentary needs of the home and classroom. This video series, entitled "Amy and the Astros," is set inside a spaceship. An English-speaking Alaskan woman, Amy, and a robot named Rod Dod informally teach English to two puppet "Astro" children who have come to Alaska from outer space.

This choice of program design is based on the theory that the Astro children can demonstrate the characteristics of all children, without reference to any particular Alaskan culture that might seem to exclude others. By involving the viewing audience in "teaching" the Astro children English, the students become involved with the show and its characters while they themselves are being taught. Also, the need for the Astro children to learn English makes possible a comprehensive, sequential program of oral language development.

The classroom teacher, with the aid of a teacher's manual, leads the class in a 5-day teaching sequence centered around each program in the series. Each of the 5-day lessons is 30 minutes in length. On the first and second days, the teacher leads the class in previewing activities; the video program is seen on the third day, followed by postviewing activities on the fourth day and evaluation on the fifth day.

The student participates in the 5-day sequence of previewing activities, viewing of the video program, and postviewing activities.

Sample Lesson

(Third lesson in 5-day series)

Prior to viewing the video program on the third day of the lesson sequence the teacher suggests to the class that they listen for the words "feather," "ptarmigan," and "dog," look to see some birds that live in Alaska, and listen to hear a plane or snowmobile. The children and teacher then watch the video lesson. As the program begins, the Astro children are coloring and carrying on a simple dialog: "I want the red crayon." "Where's the orange crayon?" The robot Rod Dod enters and helps them with the colors, as yellow and red blend into orange on the video screen. One of the Astro children has drawn a picture of an Alaskan flag, and they all recite the Alaskan pledge, which is repeated throughout the series. Amy enters the set and together they look at pictures of birds. Zeon and Tora, the Astro children, try to identify the birds, but make mistakes; and Rod Dod and Amy help them. They especially have trouble with "an" eagle. Amy takes an orange out of her bag for practice with the use of "an" and the color "orange." Then they practice numbers and colors with the use of six feathers. The sound of a train introduces a picture of a train for the children to identify, followed by the sound and picture of a plane, bell, cat, clock, bird, and dog. "Listen! What do you hear? Look! What do you see?" The show concludes with the singing of "Listen and Look," a song used throughout the series. After viewing, the teacher leads the class in exercises based on the material in the program. "What can you hear in Alaska? Can you hear a bird, a plane, the snow, the wind? What can you hear at night? Can you hear the dogs, the dark, the school bell? What can you hear in Alaska?"

SUBJECT AREA(S)

Grammar, basic sentence patterns, expansion of the noun phrase, tense and verb construction, inflections, function words, and concepts and mental processes

INTENDED USERS AND BENEFICIARIES

Intended users are 5- to 7-year-old children in rural Alaska.

RD 110 004

GOAL(S) OR PURPOSE(S)

To help students: (1) To improve and develop the oral language skills necessary to communicate effectively in English; (2) to develop a good foundation of oral language proficiency upon which to base future successful achievement in reading, writing, and the more complex processes of thinking, such as concept formation, problem solving, and abstract reasoning; and (3) to further develop an understanding of a different (English-speaking) culture and be able to appreciate it and function within it without losing personal identity and respect for their own culture.

Two major purposes of this program series are also (1) to assist teachers to help children develop good oral English and, at the same time, (2) to demonstrate techniques to improve their teaching abilities for oral language.

PATTERNS OF USE

Lesson units are sequential and cumulative and should be used in consecutive order.

ASSESSMENT PROVISIONS

Evaluation is left to the individual teachers, with the suggestion that evaluations be based on both the program's detailed objectives (listed in the teacher's manual) and the teacher's own objectives for the students.

TIME REQUIREMENTS

The 32 video programs in this series are under 30 minutes each. (Originally designed for satellite transmission, each program allowed 10-15 minutes for live audiointeraction with the viewing students from the villages. This portion of each program will not be included in video tape reproductions of the series.) Using the project design of a 5-day teaching sequence centered around each video program, the entire series could be seen in 32 weeks.

IMPLEMENTATION PROCEDURES

Use of BOLD requires a video tape program cassette, video tape recorder, and television monitor, situated in a room suitable for accommodating viewers. The programs will be most effective if shown to a standard classroom number of students, and not a larger group. The teacher's manual, developed with the series, and a teacher to implement the discussion and activity suggestions are also necessary for full effectiveness of the series.

ASSURANCES AND CLAIMS

The grammatical points have been carefully selected and sequenced to allow for gradual introduction, constant reinforcement, and eventual mastery. The lessons concentrate on learning a new language pattern well, building on what the children know and have learned in previous lessons, and providing for constant review. However, the vocabulary for which the children may be held accountable is limited.

To help insure that this program series meets the needs of rural Alaskan children, a consumer committee consisting of representatives from rural Alaskan villages, the Alaska Federation of Natives, and Alaskan education and health agencies actively contributed to review and approval of program designs from their inception to actual program production. Every effort was made to represent the various Native Alaskan cultures with authenticity and sincerity, through use of artifacts, pictures, and story line relevant and recognizable to the target population.

The original program design was based on its use as live satellite transmission to rural Alaska. The last 10-15 minutes of each program allowed for live interaction, via radio, between the program host(ess) and the viewing village students. Actual participation by students increases their involvement and empathy with the show's characters. This portion of each program will not be reproduced on the video tape cassettes for distribution, and each program will be less than 30 minutes in length. While this lack of interaction may decrease the intended effectiveness of the series, additional discussion and activity initiated by the classroom teacher should be sufficient for maximum series impact.

The developers and producers have not received any reports of harm associated with the use of this product. Every effort is made to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content.

This video tape series, accompanied by a teacher's manual, can be used effectively in rural areas with specified video tape equipment without developer assistance of any kind.

MATERIALS AND EQUIPMENT

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 110 005

ALASKAN READERS (ALASKAN READING AND LANGUAGE DEVELOPMENT PROGRAM)

A comprehensive program for use with rural Alaskan children, grades 1-3, who speak English as a second language

The *Alaskan Readers* are a comprehensive reading and language development program for grades 1 through 3. More than 80 items are included in the set of materials.

Many rural (Native) Alaskan children speak English as a second language. They come to school with limited facility in English and with concepts and real-life experiences restricted to their village or region. According to an assessment by the Alaska State Department of Education, they needed a reading and language development system specifically designed for them. It would support their native cultures, be based on their conceptual and language readiness, and provide for successful reinforcing of language experiences.

The materials were designed to provide an integrated language arts experience and provide gradual introduction of vocabulary and "outside" concepts so that children were always introduced to the broader outside concepts with sufficient learning experiences to assure understanding and success.

This instructional series is self-contained and has all the components of a basic reading and language arts series including manuals, texts, workbooks, and supplementary materials. Messages to parents are provided so that they can understand the purposes of the program.

The learner participates in oral and written language epxerience, enriched by special materials such as Benjamin Beaver's Box, an oral language development kit. The decoding system is semilinguistic and is designed as the Graphonemes, a system of recognition of stable syllables in the English language, copyrighted by Virginia Jones Benedict.

SUBJECT AREA(S)

The subject areas are: elementary language arts—reading, speaking, listening, writing, and spelling.

INTENDED USERS AND BENEFICIARIES

The intended users are primary children of native extraction living in rural Alaskan villages.

GOAL(S) OR PURPOSE(S)

This program was designed to help Alaskan Native children: (1) Improve their abilities to communicate verbally in the English language, (2) learn to write and to spell effectively, (3) develop an ever-increasing ability to work independently in furthering communication skills, (4) be able to identify with characters and settings employed in the instructional media, (5) expand their concepts, (6) increase their pride in their native heritage, (7) develop pride in being part of the American heritage, (8) proceed in their learning at individual rates, (9) have readiness experience for each specific task at hand, (10) help them to learn language arts skills as an integrated whole, (11) develop thinking skills at increasing levels of competence, and (12) learn to assess their own progress. These goals are supported by more than 70 specific measurable objectives.

PATTERNS OF USE

The materials are used as a complete reading and language development program. The materials are sequenced into 11 levels extending over grades 1 through 3. Sequential use is essential.

ASSESSMENT PROVISIONS

At each of the 11 levels, an inventory is provided which diagnostically assesses the progress made by each pupil at that level. The teacher's guide provides suggestions for remediation and pacing of pupils according to their needs.

TIME REQUIREMENTS

Daily basic instruction is required. It is recommended that each primary child have not less than 20 minutes' reading instruction each morning and afternoon (40 minutes daily) in addition to many integrated language arts experiences throughout the day.

IMPLEMENTATION PROCEDURES

Teacher-training sessions of 2 days are recommended. A teacher-training kit has been prepared for this program.

Although a teacher-training workshop is recommended, it is not essential. Many teachers are using the program effectively without having experienced a workshop.

ASSURANCES AND CLAIMS

Assurances

The materials have been judged by Alaskan Natives and others to enhance self-image and cultural pride without reducing respect for others. The materials are not psychologically harmful.

Claims

A 3-year field test was conducted in Alaska with more than 200 subjects. While rigid controls were not possible, evidence was gathered that supported the attainment of most objectives.

An evaluation committee consisting of multiagency representatives in Alaska reviewed all evidence in 1972 and issued this statement: "This Evaluation Committee, having examined the history of the *Alaskan Reading and Language Development Program*, the needs upon which the program was based, and the data available regarding the achievement of the program, finds that the program comes closer than any other to providing culturally and conceptually relevant materials and that the program is effective when used well and when adapted to the needs of the children."

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Alaskan Readers				
Reading and language resource book, vol. I	1 per teacher	4.95	Reusable	
Teacher's Manual for each level	1 per teacher	7.00	Reusable	
Reading texts for each level	1 set per pupil	1.25-4.00	Reusable	
Workbooks to accompany each level	1 set per pupil	3.00	Consumable	
Supplementary materials:				
Holiday resource booklet	1 per room	8.00	Reusable	
Legend cards	1 per room	2.60	Reusable

COMMUNICATION ARTS PROGRAM I
(CAP I)

An educational system to advance the communication arts of 3- to 9-year-old children from minority backgrounds

The *Communication Arts Program I* (CAP I) is an educational system consisting of five components:

1. Oral Language Program (OLP)—sequentially presented classroom lessons with teaching strategies, providing non-English-speaking children, or those with a minimal command of English, with an adequate facility in English.

2. Reinforced Readiness Requisites (RRR) Program—classroom lessons providing learning readiness competencies through application of a system of motivational strategies.

3. Cross-Cultural Communication Program—aids the teacher in communicating with adults and children from minority backgrounds. Emphasized are the nonverbal, informal aspects of Southwestern Cooperative Educational Laboratory's (SWCEL's) CAP components. It helps the teachers understand and accept standards, values, and behaviors differing from their own so culturally relevant materials will have more meaning in the classroom. The training is directed toward developing verbal and nonverbal communication skills.

4. Teacher/Teacher Aide Companionship Training Program—5 day preservice training institute for teachers and aides employing a team approach to classroom tasks and covering the philosophy, techniques, and methods of the OLP and/or RRR program to be installed.

5. Quality Assurance Specialist (QAS) Program—provides program accountability via training of local education agency teacher(s) as specialists performing overall monitoring, conducting monthly classroom observations, providing periodic inservice training, and serving as SWCEL/local enforcement agency (LEA) liaison.

In addition, the laboratory has a testing and evaluation program, which provides for administration, scoring, and processing of pretests and posttests, supplemented by periodic content tests and for training of local education staff to conduct testing and scoring procedures. Processing is always performed by the laboratory. The SWCEL pretests and posttests provide quantitative gain scores, and the criterion-referenced content tests are combined with the quality assurance specalist's monthly reports for process evaluation to furnish data for the detection of random behavior and the reinforcement of positive behavior.

SUBJECT AREA(S)

Subject areas include:

1. Oral Language Program (OLP)—150 sequential lessons with teaching strategies in a sequence determined by linguistic and language learning theory. Lessons are divided into areas of structure and pronunciation.

2. Reinforced Readiness Requisites (RRR) Program—145 lessons providing prereading skills taught in the context of a system of reward strategies designed to install self-motivation in preschool and 1st-grade children.

3. Cross-Cultural Communication Program—Instruction for teachers in establishing communication with adults and children from minority backgrounds. Standards, values, and behaviors differing from teachers' own are presented in order that culturally relevant materials will have meaning and place for the teacher in the classroom.

4. Teacher/Teacher Aide Companionship Training Program—Team training program for teachers and aides, training aides to assume instructional tasks. Instruction centers about classroom experience-centers approach and development (by the teachers and aides) of learning objectives appropriate to the needs of the students of the teachers and aides being trained.

5. Quality Assurance Specialist (QAS) Program—Training for local enforcement agency (LEA) employee(s) to monitor SWCEL programs and assist LEA teachers and administrators to assure program accountability. Training consists of techniques for classroom observation, the conduct of inservice meetings, techniques for recording observations and providing overall guidance to teachers using SWCEL programs, and procedures for serving as local contact between LEA and program developers.

INTENDED USERS AND BENEFICIARIES

The intended product users are elementary school teachers, elementary schoolteacher aides, elementary school administrators, and parents for use with children 3 to 9 years of age from low socioeconomic levels and/or from families and homes of other than English-speaking origins.

The intended beneficiaries include all school districts and classrooms where there are 3- to 9-year-old students meeting difficulty in the classroom because of little or no command of the English language. These may be children of either sex and any social or national origin, locale, or income level.

GOAL(S) OR PURPOSE(S)

The broad goal of CAP I is to advance the communication arts of 3- to 9-year-old children from minority backgrounds, thereby improving the early educational opportunities of this target group. The individual program goals are as follows:

1. Oral language program objectives: To provide non-English-speaking children (or those children with a minimal command of the English language) with an adequate facility in English such that these children will be able to function in school programs conducted in English.
2. Reinforced readiness requisites objectives: (a) To increase children's ability to defer rewards in the education setting, (b) to make reinforcement integral to academic tasks, (c) to increase teachers' effectiveness in shaping and maintaining desirable behavior among their pupils, and (d) to devise an instructional program that will provide kindergarten and 1st-grade children with readiness competencies that are prerequisites for successful school achievement.
3. Cross-Cultural Communication Program Objectives: To aid in development of teachers' verbal and nonverbal skills in communicating with adults and children from minority backgrounds.
4. Teacher/Teacher Aide Companionship Training Program Objectives: (a) To train teachers and teacher aides to function as a classroom team and (b) to achieve teacher/aide interaction and sharing of complementary instructional roles within the framework of the SWCEL program.
5. Quality assurance specialist program objectives: (a) To provide training for local education agency employee(s) to serve as monitor(s) and resident "specialist" for SWCEL programs and materials and (b) to maintain ongoing accountability for SWCEL programs by establishing lines of communication between SWCEL and the LEA to be used as needed.

PATTERNS OF USE

The Oral Language Program is designed to be used daily by 1 teacher (or aide) with groups of up to 10 children from ages 5 to 7. Each lesson is approximately 25 minutes long, although the teacher encourages the children to use sentence patterns learned in the lesson during the rest of the day. The lessons deal entirely with oral and auditory aspects of English; there is no instruction in either reading or writing contained in the program. The lessons generally deal with only one style of English—an informal version of the standard dialect. The OLP attempts to provide pupils with enough experience in English so that they will be able to grasp new utterances and situations successfully. Games, physical activities, dialogs, pictures, and other stimuli support the language being taught and capitalize on the kinds of behavior in which 5- to 7-year-olds are likely to engage. Question asking and answering routines appear commonly throughout the lessons.

In the Reinforced Readiness Requisites Program, three phases have been designed to increase the child's motivation. In the first phase, tangible rewards are used to motivate and sustain desired behavior. Before a lesson is completed, the teacher gives a reward based on acceptable group performance. Subsequent to the first week, rewards are given on alternate days. Rewards are always given on the basis of group performance rather than individual achievement. During phase 2, tokens provide the essential link in moving the children from immediate to delayed rewards. Tokens are material objects, such as poker chips, which assume reinforcing power through exchange for backup rewards, such as toys. These tokens are administered either daily or on alternate days for acceptable group performance and redeemed initially at the end of either a 1-week or 2-week period for a duration of 9 weeks. In the final phase, extending over 12 weeks, tangible rewards are gradually withdrawn. Tokens and backup rewards are progressively tapered off until the desired performance is maintained through the child's own motivation and the teacher's conventional praise and approval. By the time the youngsters have completed the program (generally 1 year in duration), they no longer need outside tangible sources of motivation to maintain their performance.

In the Cross-Cultural Communication Program, instructional techniques include lecture, simulation, and role playing. Media is an integral ingredient and is used to build the teacher's awareness of cultural differences as well as the importance of verbal and nonverbal communication. Media presentations involve group participation and followup. Video tape equipment is utilized so that teachers may observe monitor playback of their performances.

The Teacher/Teacher Aide Companionship Training Program emphasizes the involvement of both members of the team in the instructional process. During institutes, the teacher aide receives general instruction in the characteristics and learning styles of primary-level children, the role of the teacher aide in school-community relations, an awareness that there may be differences between the school and home environments, and the respective roles of the teacher and aide in the classroom. Specific instruction is given in supplementing the teaching of English as a second language. Both teachers and aides participate in microteaching sessions. In these exercises, each person can see and evaluate individual classroom performance through the use of video tape playback on television monitors.

The quality assurance specialist has three major tasks: (1) To provide general coordination of laboratory programs and teacher efforts, (2) to provide continuing education through presentation of inservice meetings, and (3) to monitor teacher and student behaviors to assure that they fall within the program's specified tolerance levels. The QAS employs several devices to determine and maintain correct teacher behavior including classroom observation, inservice meetings, the answering of questions, and other evaluation techniques. The specialist also must be able to interpret and explain to teachers and administrative personnel all the tests and assessment devices used with SWCEL programs.

ASSESSMENT PROVISIONS

The Oral Language Program testing assesses the performance of children as speakers of English by eliciting their verbal responses and measures aspects of vocabulary, pronunciation, and syntactic construction. The test can be used by teachers to group children according to language ability, and the teacher is taught to use this information appropriately. Administrators can use test results to determine whether a language program is necessary and what percentage of the population should participate. Six content tests measure progress and assist the quality assurance specialist and teacher to guide the progress of the program effectively. The teacher scores the tests, thus obtaining immediate feedback for determining need for review. The posttest determines progress at the end of the school year.

The Reinforced Readiness Requisites criterion test establishes the beginning and terminal behavior of the children and knowledge of the concepts to be covered; the six intermediate retention tests not only measure progress but are a device in the program for helping the child to work for no reward.

SWCEL recommends that the local education agency utilize SWCEL's Process Evaluation Model which SWCEL performs using the classroom raw data to present a more exact analysis of program operation. A random sampling of the content tests is compared to the pretests, content scores, and the quality assurance specialist's reports of observation, and a process evaluation statistically comparing each school site and teacher and indicating the effectiveness of instruction is prepared. The Process Evaluation report is able to reflect delicate variations in program operation, and resultant data are then presented to the LEA and the QAS for their action.

It is of interest to note the high quality of the assessment component. Tests are administered to each child individually and separated from the classroom setting. Each response is tape recorded by testers, qualified only after a 1-week training session in test administration and scoring. (SWCEL will provide testers or LEA may opt for participation in a training institute for LEA staff members.)

TIME REQUIREMENTS

The time required to complete the individual programs is as follows:

1. OLP: 25 minutes per day for 150 lessons
2. RRR: 15 minutes per day for 145 lessons
3. Instructional personnel: One-time training for 1 week plus inservice meetings during the first year at the rate of one per month.

IMPLEMENTATION PROCEDURES

The *Communication Arts Program I* (CAP I) is extensively adaptable, adapting to local language, pacing of lessons to local environment, and adjusting to specific needs of the community (i.e., size of target population, use in local sites of previously trained teachers as assistant trainers, incorporation of local folkways and culture via SWCEL cultural relevancy materials, and adjustment of components recommended for a school district to correspond to the finances of the district).

The CAP I can be integrated within existing curriculum providing for minimal programmatic adjustment in the classroom.

SWCEL CAP I offers a complete system which provides the classroom materials and lessons, training for teachers and administrators, monitoring, testing, and evaluation. This provides the school district with an opportunity for accurate appraisal of overall costs; and the district the advantage of not being required to locate accessory items, personnel, and services. CAP I trains teachers and teacher aides to be effective language teachers in the primary school.

Unlike other similar products, the CAP I is not simply a set of workbooks and materials delivered to a teacher on the first day of school. The CAP I supplies the teacher with a training program which is not only thorough but ongoing throughout the school year.

Personnel Required for Product Adoption and Implementation

Personnel costs are an extremely flexible item. No new or additional personnel are required for the LEA. Training is included as an integral part of the product whenever the CAP I or components are installed. The required 1-week (one-time) training for the teachers, testers, and quality assurance specialist may involve some additional salary expenditure by the LEA.

ASSURANCES AND CLAIMS

A summative evaluation of the *Communication Arts Program I* contracted by SWCEL was conducted in November 1971 by impartial evaluators from outside the laboratory. This evaluation considered the needs and imperatives of the potential program users and was directed toward judgments of accomplishment of program objectives from the viewpoint of the classroom teacher and school administrator.

This evaluation report found that the OLP served as a useful technique for teaching English as a second language. OLP pupils showed more verbal facility than pupils without the program in previous years. All classes showed gains from pretest to posttest, and the lowest mean class gain reported compared favorably with that of non-OLP pupils reported the previous year. Based upon the sample, the

OLP was determined to be a technique which is acceptable to teachers. Students demonstrate improvement in subject areas other than English and displayed increased interest in schoolwork in general. Gains were noted in pupils' self concept, ease in classroom, cooperation with others, attentiveness, and listening ability. The product effect upon teachers improved their relationships with the students and increased sensitivity to and awareness of language problems.

In Oklahoma, the Oral Language Program, the Reinforced Readiness Requisites Program, and the Teacher/Teacher Aide Program of the *Communication Arts Program I* were installed in 1969 in 10 school districts where native American school-age population ranges from 10 to 60 percent of the total school-age population. After 2 years an evaluative report was prepared on use of the Oral Language Program and Reinforced Readiness Requisites and other CAP I components used with lower primary and preschool children from predominantly low-income Cherokee and Anglo homes. This report concluded that the product had met its objectives and that significant improvement in student ability and learner gains for 350 children had been achieved.

The entire development of the SWCEL products and CAP I was pointed toward alleviation, if not elimination, of the social handicaps often connected with the sexual, racial, religious, or socioeconomic stereotyping of an individual student. Teachers and administrators, through a cultural awareness component, are made aware of the various biases present in human relationships and of communication techniques and methods to decrease their impact, while broadening the teachers' understanding and knowledge of other cultures.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
OLP classroom kit, 150 lessons, pictures, realia, puppets	1 per classroom	175.00	Reusable	
RRR classroom kit, 3 teacher's manuals, realia, stimulus cards	1 per classroom	150.00 initially, 75.00 for replacement set of realia	Realia yearly	
Teacher/teacher aide training (including RRR and/or OLP, CCC) 5-day training institute with microteaching techniques, manuals, teach/reteach method with VTR review and analysis with live children	1 teacher or 1 teacher aide per classroom	300.00 per person or 500.00 per T/TA team	No training required 2d year	
QAS 5-day training institute, manual, record sheets	1 QAS per 1-10 teachers	200.00 per person	No training required 2d year	
Inservice rental of QAS kits (16) for 1 year	1 per school district	200.00	Same each year	
QAS maintenance service required for novice teacher/teacher aides for first 10, and $10 for each additional teacher	Per school	200.00	Same each year	
Testing, scoring, processing		18.00 per child	Same each year	
Scoring, processing		5.00 per child	Same each year	
Processing		3.25 per child	Same each year

SWRL ENGLISH LANGUAGE AND CONCEPTS PROGRAM FOR SPANISH-SPEAKING CHILDREN (LCS)

A performance-based program which teaches Spanish-speaking children, grades K-1 to communicate effectively in the English language

The *English Language and Concepts Program for Spanish-Speaking Children* (LCS) teaches Spanish-speaking children to communicate effectively in the English language. The performance-based program is generally used in kindergarten and 1st grade. It is designed to prepare children to enter the school's regular instructional program as quickly as possible. LCS materials and procedures enable the non-Spanish-speaking teacher to provide effective instruction appropriate to the needs of each pupil. Classroom activities provide experience using the vocabulary words, pronunciation, and grammatical structures necessary for effective communication, as well as frequent opportunities for strengthening newly learned language skills.

While cultural or environmental support for the program's learning activities is maintained through materials that reflect objects and experiences common to the Mexican-American culture, instruction in the program is presented in English only. The lessons have been developed to enable a teacher who does not speak Spanish to communicate with a child who speaks only Spanish.

LCS gives special attention to the development of communication skills needed in school and at home. Pupils learn to converse using the names of common classroom objects, household items, and activities involving food, shelter, pets, health, clothing, and family. They also acquire verbs which describe daily activities, such as sleeping and eating. In addition, they learn geographic terms, modes of transportation, monetary units, and vocabulary related to recreation and safety. Successful attainment of program outcomes helps to prepare pupils for future reading and writing in the subject matter areas of mathematics, science, and social studies.

LCS is organized into carefully sequenced instructional units. Each unit contains daily lessons, assessment activities, and review activities. Each daily lesson includes initial teacher-directed instruction and individual followup practice. The teacher begins the lesson with a short review of the concepts taught in the previous lesson. Following the review session, new concepts are introduced and pupils work together, practicing the skills they have learned. After teacher-directed instruction, an optional activity is suggested that promotes natural communication among pupils through enjoyable games. A followup practice session presented later can easily be conducted by the teacher, an aide, or a tutor.

SUBJECT AREA(S)

English language, conceptual skills and communication skills essential to the success of Spanish-speaking children in school, home, and social environments are the subject areas.

INTENDED USERS AND BENEFICIARIES

The program was developed for use with all Spanish-speaking children who have not yet attained its learning outcomes. Although the program's extensive testing has been done principally with kindergarten and 1st-grade children, LCS has also been used with older elementary schoolchildren.

LCS materials and procedures were designed to be used by a regular classroom teacher; it is not necessary that the teacher be a linguist. The instructional materials incorporate the required linguistic exercise in a manner easily managed by the classroom teacher.

GOAL(S) OR PURPOSE(S)

The program emphasizes the development of English language skills essential to success in reading and other formal instruction. The program is designed specifically for Spanish-speaking children who do not possess the repertoire required for entry into the school's regular basal reading program.

The structure of the program incorporates systematic attention to lexicon, phonology, and syntax. These linguistic constructions are sequenced to capitalize on the regularities and interrelations of both Spanish and English. The development of the program has included specific attention to insuring that instruction is flexible and manageable for teachers, and uncomplicated and appealing for pupils.

PATTERNS OF USE

LCS is organized into 15 instructional units. Each unit contains 15 daily lessons, assessment activities, and review activities. Each daily lesson includes 25 minutes of initial teacher-directed instruction and 25 minutes of followup practice. The teacher begins each lesson with a short review of the concepts taught in the previous lesson. Following the review session, new concepts are introduced, and pupils work together practicing skills they have learned. At the end of the teacher-directed instruction, an optional activity is suggested that promotes natural communication among pupils through enjoyable games. A followup practice session presented later easily can be conducted by the teacher, an aide, or a tutor.

The program includes options for utilization of upper-grade students or adult aides to assist the teacher with selected practice and maintenance activities. The materials and procedures necessary for the effective involvement of paraprofessionals in these instructional support roles are provided.

Such instructional support options enable a class to benefit from structured assistance consistent with both the program requirements and available human resources. Procedures for appropriate paraprofessional activities, the corresponding training materials, and followup procedures for tutor aide supervision are provided.

ASSESSMENT PROVISIONS

The LCS placement aid helps determine which children should participate in the program and the appropriate point of their entry.

Program assessment materials provide ongoing information regarding pupil learning and help identify those pupils who need supplementary instruction on program skills. Scheduling guidelines, regular assessment exercises, and individual achievement records are assessment-related components of the instructional program.

Additional assessment materials and procedures relate to: (1) Midyear and end-of-year pupil performance measures, (2) collection and reporting of performance and instructional scheduling information, (3) schoolwide sampling plan and data collection schedule, (4) data processing, (5) instructional decision rules for determining alternative courses of action, and (6) guidelines for evaluating program modifications.

The LCS program quality assurance (QA) system includes the resources to identify and report instructional accomplishments attained during program use. This information provides a basis for instructional planning by teachers and administrators. The system also provides a means by which the pupil proficiency attained with LCS can be credited in a manner that is understandable by parents and others interested in the schools.

TIME REQUIREMENTS

LCS is organized into 15 instructional units, each containing daily lessons, assessment activities, and review activities. The rate at which a pupil progresses through LCS depends upon the amount of instruction received per day and the point at which the program is entered. Generally each daily lesson requires 25 minutes of initial instruction and 25 minutes of followup practice. Classroom sets are packaged in two sections—units 1-8 and units 9-15. Each section contains sufficient materials to provide instruction for 1 year.

IMPLEMENTATION PROCEDURES

The training and installation system includes the resources that enable a school district to install LCS efficiently and effectively. For example, comprehensive materials and procedures are provided for training school supervisors to conduct program orientation sessions for teachers. A comprehensive, self-contained program used by supervisors in these training sessions is furnished. School-verified training materials and procedures enable district personnel to assume all responsibility for the teacher training required to begin using the program effectively and to conduct this training within the time conventionally available to school personnel. Materials are also provided for training tutors and aides in specific support skills.

Also within the installation system are materials containing suggestions for performing administrative functions related to LCS, such as conducting briefing sessions for school boards, parents, and community members; ordering and distributing materials; conducting followup training sessions for teachers; monitoring the operation of the program during the school year; and integrating the program with the existing school curriculum.

ASSURANCES AND CLAIMS

Assurances

The materials and procedures composing the product have been designed for convenient use by the teacher with no requirement for specialized personnel. During each of the 15 tryouts involving the aggregate of more than 550 classrooms and 11,000 pupils, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema. Tryout inquiry procedures have served to assure teacher acceptability and product exportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance as related to compliance with extant codes in such areas as sexual stereotyping, cultural and racial diversity, dangerous substances, or religion.

Claims

Release of the product for commercial distribution requires demonstration that it has been used successfully to obtain prespecified program performance on each of the outcomes. The SWRL quality testing procedures for instructional products and the criteria against which the instructional product has been evaluated during development provide this evidence.

To provide a replicable means of insuring that the program continues to function reliably under natural school conditions apart from SWRL, a set of procedures referred to as "Quality Assurance" has been developed. As the tryout monitoring procedures did for SWRL staff during product development, the QA resources provide regular periodic information on various indicators of instructional accomplishment and program status for each class, school, and district. Such information provides school agencies with quantitative data relevant to program effectiveness and enables them to communicate instructional successes attained through program use to school boards, funding agencies, and other interested groups. Also, individual pupil accomplishments are easily identified and available for sharing with parents. This information has proven especially useful in furthering parent/school communication and in fostering parental support.

BILINGUAL EARLY CHILDHOOD PROGRAM (BECP), LEVEL I

A comprehensive learning system for 3-year-old Spanish-speaking children, their teachers, and parents

The *Bilingual Early Childhood Program* (BECP), *Level I*, is a comprehensive learning system for 3-year-old Spanish-speaking children, their teachers, and parents. It is part of a 3-year sequential early childhood program developed by the Southwest Educational Development Laboratory (SEDL). The three parts of the learning system are: Instructional materials, staff development, and parent involvement. The level I curriculum contains 25 instructional units which include 4 kinds of activities—visual, auditory, motor, and ideas and concepts (cognitive). The activities are carefully sequenced and integrated to complement and reinforce each other by relating to the unit topic or to a particular skill. Each unit includes approximately 15 lessons and activities, teacher's guidebooks, materials and media for the activities, and curriculum-based unit and mastery tests. Each instructional unit centers around a single theme, such as "Body Awareness" or "Musical Instruments," and is designed to relate meaningfully to the children's previous experiences while expanding their skills and abilities in new situations. The program provides for relating the children's learning to their home situations through home activities and materials for use by parents. Staff development provides preservice and inservice training for teachers in the principles of classroom management, teaching strategies, effective use of materials and equipment, testing, and working with parents. The total package provides a comprehensive framework within which children can develop their skills and abilities in Spanish and in English. Parents can be involved in the educational process, and teachers can expand their teaching skills.

The *BECP, Level I*, is a developmental program concerned with the general cognitive, psychomotor, and affective stages common to all children. The activities begin with lower order skills and proceed systematically to higher level tasks. Spanish is the language of instruction for the first part of the program, and Spanish continues to be used throughout the program. The class is divided into three or four small groups which cycle through alternating periods of direct instruction, assigned independent activities, and self-selected activities. Classroom arrangement and management are integral to the program, and guidelines and procedures for arrangement and management are provided in the staff development portion. The curriculum is designed to be used by bilingual teachers and assistant teachers. Activities and procedures have been designed to promote satisfying interactions between teacher and learner so that the children can develop their full intellectual and personal potentials and can learn to function comfortably and competently in two languages.

Teacher's guidebooks in both English and Spanish are provided, and the recommended language of instruction is specified for each lesson. Instructional units contain such multimedia materials as puzzles, transparencies, filmstrips, records, games, line drawings, and photographs. They also include curriculum-based unit mastery tests that enable teachers to monitor the children's progress.

SUBJECT AREA(S)

The three components of the BECP, *Level I*, are instructional materials, staff development, and parent involvement.

–Instructional materials: These are organized into 25 instructional units built around a single theme or topic. Each unit contains approximately 15 planned activities designed to teach the 4 instructional elements—visual, auditory, motor, and ideas and concepts. The curriculum includes the following unit topics:

Unit 1. School (la escuela)
Unit 2. Body awareness (conciencia del "yo" físico)
Unit 3. Body awareness (conciencia del "yo" físico)
Unit 4. Clothing (ropa)
Unit 5. Food (comida)
Unit 6. Food (comida)
Unit 7. Family (la familia)
Unit 8. Home (la casa)
Unit 9. Appliances (aparatos)
Unit 10. Animals (animales)
Unit 11. Animals (animales)
Unit 12. Vehicles (vehículos)

Unit 13. Musical instruments (instrumentos musicales)
Unit 14. Toys (juguetes)
Unit 15. Community helpers (ayudantes de la comunidad)
Unit 16. Community helpers (ayudantes de la comunidad)
Unit 17. Buildings (edificios)
Unit 18. Self-awareness (conciencia de sí mismo)
Unit 19. Self-awareness (conciencia de sí mismo)
Unit 20. Clothing (ropa)
Unit 21. Food (comida)
Unit 22. Natural environment (la naturaleza)
Unit 23. Community environment (ambiente de la comunidad)
Unit 24. Checklist (inventario)
Unit 25: Checklist (inventario)

Each unit available in Spanish and English training components includes visual training, auditory training, motor training, ideas and concepts, and related activities.

INTENDED USERS AND BENEFICIARIES

Instructional materials: Three-year-old Spanish-Speaking children from low-income families.

Staff development: Bilingual teachers and assistant teachers who are using the *BECP, Level 1,* curriculum. Staff development activities are conducted by the supervisor.

Parent involvement: Parents and other family members whose children are enrolled in the *BECP, Level 1.*

GOAL(S) OR PURPOSE(S)

The goals are: (1) To develop the child's sensory-perceptual skills, (2) to develop the child's language skills in both English and Spanish, (3) to develop the child's thinking and reasoning abilities, and (4) to help the child develop a positive self-concept.

PATTERNS OF USE

In all its aspects, the *BECP, Level 1,* moves sequentially from what the children know to what they do not know. Language and concept development is systematically incorporated throughout each instructional element. Content begins with concrete objects, moves to pictures and two-dimensional representations, and concludes with the use of words only. Within each skill level, the children build gradually, in small steps, adding new skills or learning new applications for skills acquired in other contexts. Because of the systematic buildup and integration of skills, it is essential that the instructional units be presented in order.

The program cannot be implemented effectively without the staff development materials. The 5-day preservice workshop is essential, along with continuing teacher training provided in the teacher's manuals. Details of teacher training are left to the supervisor.

The parent involvement product is implemented by the classroom teacher with assistance from the supervisor. Use of this product is optional.

ASSESSMENT PROVISIONS

For instructional materials, curriculum-based, criterion-referenced unit and mastery tests are provided to enable the teacher to monitor each child's progress. For the staff development portion, mastery questions keyed to each teacher's manual are provided as a guide to reading and to aid the supervisor in assessing teachers' understanding of the materials. There are no provisions for assessment of parent involvement.

TIME REQUIREMENTS

Instructional materials: One school year in an all-day also program. Adaptation provided for 1/2-day programs which may not complete all 25 units. The instructional activities also have been used in migrant programs which do not meet for a complete school year.

Staff development: Five days is the minimum for the preservice training; 10 or more days is recommended. In addition, at least 2 hours per week of inservice training is recommended. Teachers also require at least 45 minutes per day for planning and preparation.

Parent involvement: No time requirements. Home activities take 10 to 15 minutes.

IMPLEMENTATION PROCEDURES

1. No more than 20 children should be enrolled in each class.

2. Children should be from economically disadvantaged backgrounds.

3. The dominant language of a majority of each class should be Spanish. (The activities may be taught in either English or Spanish, but their sequencing and difficulty may not be appropriate for native English speakers.)

4. Each class must have one teacher and one assistant teacher, both of whom should be bilingual.

5. It is strongly recommended that 1 full-time supervisor be assigned for each 10 classrooms.

6. The local supervisors should participate in a 7- to 10-day preservice workshop designed to train them to install the program and to conduct preservice and inservice teacher training.

7. A 5-day preservice workshop for teachers should be held at each site before instructional activities begin. Materials for the workshop are provided.

8. Staff development supervisors generally will spend approximately 1-1/2 to 3 hours each day observing in classrooms.

9. Two to three hours per week should be allotted for teacher inservice training. In addition, teachers and assistant teachers should have at least 45 minutes per day for planning and preparation. This time must be scheduled so that the teaching team can plan together.

Personnel Required for Product Adoption and Implementation

The *BECP, Level 1,* is designed to be taught by a teacher and a paraprofessional, both of whom are bilingual. Parent Involvement is also implemented by this teaching team.

Staff development is implemented by a supervisor. It is recommended that supervisors obtain the site staff development materials and attend a workshop for supervisors conducted by the publisher.

ASSURANCES AND CLAIMS

Assurances

There have been no reports or complaints of harm or damage resulting from the use of *BECP, Level I.* This assurance is supported by feedback from teachers in 72 field test classrooms and from field test results. The harmlessness of using the bilingual approach to teach Spanish-speaking children is demonstrated by the fact that children enrolled in the field test version of this program performed as well as monolingual English speakers on standarized tests.

No complaints relating to social, sexual, racial, or other biases have been received from teachers using either the field test or the revised published version. Although there have been no complaints the materials do make use of the generic "he" to refer to the child and "she" to refer to the teacher.

In the field test, 72 test classrooms implemented the program with developer assistance only for staff development. An additional 41 classrooms have installed the revised published program with no developer intervention.

Claims

Children enrolled in field test classes made significant gains on curriculum-based, criterion-referenced tests. This was true for all instructional elements. Project children also made significant pretest-to-posttest gains on a standardized test of general cognitive abilities. A user satisfaction questionnaire administered to field test teachers indicated satisfaction with the program. Subsequent to field test, program revisions were made to improve the product's effectiveness. Data from the revised published version are not available.

The *BECP, Level I,* was developed according to the product development process used by SEDL. This process includes the following stages: (1) Context analysis, (2) conceptual design, (3) product design and design test, (4) pilot test, (5) field test, and (6) dissemination. At each stage, the product is evaluated and revised. The published version contains revisions indicated by results from the field test. Since the initial product design, the product has been tested over a 4-year period in a total of 149 classrooms.

A careful curriculum search has identified the *BECP, Level I,* as the only truly bilingual program designed to meet the needs of 3-year-olds.

BILINGUAL EARLY CHILDHOOD PROGRAM (BECP), LEVEL I - THREE YEAR OLDS, INSTRUCTIONAL MATERIALS

A developmentally oriented program which emphasizes mastery of skills and concepts in 3-year-old Spanish-speaking children

The *Bilingual Early Childhood Program*, (BECP),- *Level I—Three-Year-Olds, Instructional Materials* is designed for use with 3-year-old Spanish-speaking children. The program is developmentally oriented, and is concerned with the general cognitive, psychomotor, and affective stages common to all children. It emphasizes mastery of skills and concepts in four major areas: Visual, auditory, motor, and ideas and concepts. Activities involving these content or skill areas are organized into 25 instructional units built around a single theme or topic such as "Body Awareness" and "Musical Instruments." The activities are carefully sequenced and integrated to complement and reinforce each other by relating to the unit topic or to a particular skill. Each unit includes approximately 15 lessons and activities, teacher's guidebooks in Spanish and in English, materials and media for the activities, and curriculum-based unit and mastery tests. Unit topics are designed to relate meaningfully to the children's previous experiences while expanding their skills and abilities in new situations. Activities begin with lower order skills and proceed systematically to higher level tasks. Spanish is the primary language of instruction for the level I curriculum. English is introduced informally in the latter part of the school year. The class is divided into three or four small groups which cycle through alternating periods of direct instruction, assigned independent activities, and self-selected activities. The curriculum is to be taught by a bilingual teacher and a bilingual assistant teacher. Activities and procedures have been designed to promote satisfying interactions between teacher and learner so that the children can develop their full intellectual and personal potentials and can learn to function comfortably and competently in two languages.

SUBJECT AREA(S)

Each of the 25 instructional units contains approximately 15 planned lessons and activities utilizing puzzles, transparencies, filmstrips, audiotapes, games, line drawings, posters, and photographs. Unit content has been designed to build upon the children's prior knowledge while introducing new concepts. The units familiarize the children with concepts in several kinds of lessons and promote their application to various contexts to assure transfer and generalization of learning. For example, the concept of color is introduced in the visual training element in early units through simple matching exercises. In later units, color labels are taught in a strand of auditory activities. The concept of color is reinforced in "Ideas and Concepts," where the children are expected to describe or classify objects according to color. Unit topics are as follows:

Unit 1. Orientation to school (orientación a la escuela)
Unit 2. Body awareness (conciencia del "yo" físico)
Unit 3. Body awareness (conciencia del "yo" físico)
Unit 4. Clothing (la ropa)
Unit 5. Food (la comida)
Unit 6. Food (la comida)
Unit 7. Family (la familia)
Unit 8. Home (la casa)
Unit 9. Furniture and appliances (los muebles y los aparatos domésticos)
Unit 10. Animals (los animales)
Unit 11. Animals (los animales)
Unit 12. Vehicles (los vehículos)
Unit 13. Musical instruments (instrumentos musicales)
Unit 14. Toys (juguetes)
Unit 15. Community helpers (ayudantes de la comunidad)
Unit 16. Community helpers (ayudantes de la comunidad)
Unit 17. Buildings (edificios)
Unit 18. Self-awareness (conciencia de sí mismo)
Unit 19. Self-awareness (conciencia de sí mismo)
Unit 20. Clothing (la ropa)
Unit 21. Food (la comida)
Unit 22. Natural environment (la naturaleza)
Unit 23. Community environment (ambiente de la comunidad)
Unit 24. Checklist (inventario)
Unit 25. Checklist (inventario)

Instructional Elements

The instructional elements contain skill areas such as: Visual training—(1) visual constancy for properties of materials, (2) classification of visual stimuli, (3) special relationships, (4) visual memory, (5) part-whole relationships; auditory training—(1) identification, (2) discrimination, (3) imitation, (4) listening comprehension;

motor training—(1) directionality, (2) fine motor skills, (3) gross motor skills, (4) body concept; and ideas and concepts—(1) recognition, (2) labeling, (3) association, (4) comparing, (5) categorizing, (6) describing, (7) synthesis and application.

Related activities are activities which promote reinforcement and elaboration of the concepts and skills learned in the other elements.

Instructional Activities

The teacher's manual contains the following information for each activity: Overview—(1) objectives, (2) statement of purpose, (3) summary of materials required; and procedure—(1) introduction, (2) demonstration, (3) interaction, (4) conclusion, (5) expansion.

INTENDED USERS AND BENEFICIARIES

The product is intended for 3-year-old Spanish speakers from low-income families. Although designed primarily for 3-year-old Spanish-speaking children and their teachers, the program has also been used with English speakers. The developers rate its use with English speakers as "successful."

GOAL(S) OR PURPOSE(S)

The goals of this product are: (1) To develop the child's sensory-perceptual skills, (2) to develop the child's language skills in both English and Spanish, (3) to develop the child's thinking and reasoning abilities, and (4) to help the child develop a positive self-concept.

PATTERNS OF USE

In all its aspects of the *BECP, Level I, Instructional Materials*, moves sequentially from what the children know to what they do not know. Language and concept development is systematically incorporated throughout each instructional element. Content begins with concrete objects, moves to picture and two-dimensional representations, and concludes with the use of words only. Within each skill level the children build gradually, in small steps, adding new skills or learning new applications for skills acquired in other contexts. Because of the systematic buildup and integration of skills, it is essential that the instructional units be presented in order.

ASSESSMENT PROVISIONS

The *BECP, Level I, Instructional Materials* contains the following curriculum-based criterion referenced tests: Unit test to assess the child's ability to meet the objectives of unit activities, mastery tests to assess the child's mastery of concepts and skills over an 8-unit interval, and pretests and posttests.

TIME REQUIREMENTS

One school year in an all-day program is required. Adaptation is provided for 1/2-day programs which may not complete all 25 units. The curriculum has also been used in migrant programs which do not meet for a complete school year.

IMPLEMENTATION PROCEDURES

1. Not more than 20 children should be enrolled in each class.
2. Children should be from economically disadvantaged backgrounds.
3. The dominant language of a majority of each class should be Spanish. (The activities may be taught in either English or Spanish, but their sequencing and difficulty may not be appropriate for native English speakers.)
4. Each class must have one teacher and one assistant teacher, both of whom should be bilingual.
5. It is strongly recommended that 1 full-time supervisor be assigned for each 10 classrooms.
6. The local supervisors should participate in a 7- to 10-day preservice workshop designed to train them to install the program and to conduct preservice and inservice teacher training.
7. A 5-day preservice workshop for teachers should be held at each site before instructional activities begin. Materials for the workshop are provided.
8. Staff development supervisors generally will spend approximately 1-1/2 to 3 hours each day observing in classrooms.
9. Two to three hours per week should be allotted for teacher inservice training. In addition, teachers and assistant teachers should have at least 45 minutes per day for planning and preparation. This time must be scheduled so the teaching team can plan together.

The curriculum requires a bilingual teacher and an assistant teacher for each classroom and a supervisor for each 10 classrooms.

ASSURANCES AND CLAIMS

The *BECP, Level I, Instructional Materials* was tested over a 5-year period in rural and urban classrooms in which children from Spanish-speaking homes were enrolled. These classrooms included a high concentration of children from low-income families. Children of migrant agricultural workers have also participated in the program. Extensive feedback was collected from teachers, supervisors, and others working with the program; there have been no reports of harm or damage to children caused by participation in the curriculum.

The curriculum was designed to be relevant to the cultural, social, linguistic experiences of Spanish-speaking children, particularly Mexican American children of the Southwest. The program has also been implemented in several northern and midwestern cities where there are a large number of Puerto Rican children. Data have not been collected on the use of the program for middle-income children or native English speakers. The materials make use of the generic "he" to refer to the child and "she" to refer to the teacher.

The program has been installed in sites across the country without the direct intervention of the developers except for preservice training and consultation at the request of the sites.

BILINGUAL EARLY CHILDHOOD PROGRAM (BECP), LEVEL I, STAFF DEVELOPMENT

A comprehensive model for teacher preservice and inservice training

The *Bilingual Early Childhood Program* (BECP), *Level I, Staff Development* is a comprehensive model for teacher training, both preservice and inservice. It contains five teacher's manuals, accompanying filmstrips, a supervisor's manual, and an administrator's handbook. Three of the teacher's manuals form the basis for a preservice workshop conducted by the supervisor. This workshop is a comprehensive introduction for new teachers. It includes filmstrips which demonstrate model lessons and classroom arrangements. The workshop is performance based, emphasizing demonstration, role playing, and practicing of teaching skills. The supervisor's manual contains detailed instructions for conducting the workshop, including grouping and pairing of teachers, leading discussions, providing feedback, and adapting the workshop to meet the needs of more experienced teachers. The supervisor's manual also contains guidelines for implementing a bilingual preschool program, including instructions for hiring and supervising teachers, providing resources for teachers, observing in the classroom, and performing other administrative and supervisory functions.

Continuing inservice teacher training is provided through the use of the remaining two teacher's manuals. These manuals cover such topics as teacher expectations, incidental learning and modeling, adapting the program to meet children's individual needs, and effective use of equipment in a bilingual preschool program. Detailed instructions for conducting inservice training are included in the supervisor's manual.

SUBJECT AREA(S)

Staff development materials include several hours of demonstration filmstrips on classroom and lesson preparation, lesson presentation, and testing, plus the following manuals and booklets:

1. Administrator's handbook: Overview of the program and information for superintendents, principals, and other school administrators.
2. Supervisor's manual: How to conduct the performance-based preservice teacher training workshop.
3. Preservice manual—Volume 1: How the curriculum elements fit together, rationale, and goals underlying the entire program and each of the individual elements; general program information; teacher roles and responsibility, classroom organization and management; and lists of basic early childhood equipment.
4. Preservice manual—Volume 2: Detailed information about small-group instruction; sample visual, auditory, motor, ideas and concepts, and syntax of English lessons; how to prepare and administer unit and mastery tests; how to use test information to plan remedial teaching; and how to organize the classroom and plan activities so that control and discipline problems are minimized.
5. Preservice manual—Volume 3: How to set up and equip various learning centers in the preschool classroom.
6. Inservice manual—Volume 1: Practical suggestions for setting up effective learning situations and for responding to children in various situations; how teacher attitudes and expectations can influence success and failure in the classroom, how to teach through example and modeling in addition to more formal instruction; and what to do when a child does not meet the objective of a lesson.
7. Inservice manual—Volume 2: How to demonstrate the uses of manipulative equipment to the children and how to help the children learn to use the equipment independently.

INTENDED USERS AND BENEFICIARIES

Administrators, supervisors, teachers, and assistant teachers of Spanish-speaking 3-year-olds are the intended users and beneficiaries.

GOAL(S) OR PURPOSE(S)

Preservice training goals are: (1) To train the teacher in setting up a preschool classroom for maximum program effectiveness; (2) to instruct the teacher in methods of demonstrating and teaching with classroom materials and equipment; (3) to develop teacher skills in classroom assessment of children's learning; (4) to demonstrate and simulate ways of instructing young children; and (5) to assist the teacher in planning, scheduling, and managing classroom activities.

Inservice training goals are: (1) To instruct the teacher in ways of identifying and assisting children who demonstrate problems in learning, (2) to develop the teacher awareness of the ways children learn from modeled behavior, (3) to develop teacher awareness of the effect of negative and positive expectations on the behavior of children, and (4) to further develop the teacher's ability to maximize the learning which can occur through the use of classroom materials.

PATTERNS OF USE

The preservice training manuals are designed to be used with the accompanying filmstrips in a preservice workshop conducted by the supervisor. The preservice training model provided in the supervisor's manual details essential activities although the actual structure of the workshop is left to the supervisor.

The inservice manuals are designed to be used as part of a continuing program of teacher training, the specific application of which is a supervisory function.

ASSESSMENT PROVISIONS

There is no formal testing. Teacher evaluation is an ongoing part of the supervisor's activities with observational checklists provided.

The preservice training model workshop is heavily performance based in its methods and objectives. Participants are expected not merely to read about and discuss their roles in the program, but also to show that they understand and can perform the behaviors associated with those roles. They practice teaching lessons, giving equipment demonstrations, making out schedules, planning related activities, making smooth transitions, and setting up their classrooms.

The supervisor's manual contains mastery questions to assess the teacher's understanding of the material presented. It also contains guidelines for observing and evaluating teacher classroom performance and for providing feedback and guidance.

TIME REQUIREMENTS

The preservice workshop requires a minimum of 5 days, 6 hours per day. Inservice training is an ongoing activity consisting of 2 to 3 hours of training per week throughout the school year. In addition, the teacher-assistant teacher team should have a minimum of 45 minutes each day to plan for the following day.

During the first part of the year, the supervisor visits the classrooms approximately 1-1/2 to 3 hours per week to observe.

IMPLEMENTATION PROCEDURES

The requirements for effective presentation and use of the staff development product are as follows:

1. During the first year of the program, it is strongly recommended that 1 full-time supervisor be assigned for each 10 classrooms to assist with regular and continuous staff development.
2. The local supervisor will participate in a 7- to 10-day preservice workshop for supervisors, designed specifically to train them to install the program and to conduct preservice and inservice teacher training.
3. A 5-day preservice workshop for teachers will be held at each site before instructional activities begin.
4. Staff development supervisors should spend approximately 1-1/2 to 3 hours each day observing in classrooms.
5. Teachers should be given 2 or 3 hours per week for inservice training, as well as daily planning time.

ASSURANCES AND CLAIMS

No reports of harm or damage to teachers or children resulting from the use of staff development activities were reported.

All materials in the *Bilingual Early Childhood Program, Level I*, including the staff development materials, were designed to be relevant to the cultural, social, and linguistic experiences of Spanish speakers. It is recognized, however, that teachers may or may not share these experiences, and the teacher materials do not assume a particular background or heritage. The generic "she" is used to refer to the teacher and the supervisor, and "he" is used to refer to the child.

INFORMATION CURRENT AS OF MARCH 1975 ■

BILINGUAL EARLY CHILDHOOD PROGRAM (BECP), LEVEL 1, PARENT INVOLVEMENT

A program designed to be used by parents at home to reinforce the materials used by children in school

The parent involvement product is comprised of the following materials: A teacher's manual, *School and After: Parents Help*; a filmstrip with audio recording, "School and After: Parents Help," and a parent's manual, *Home Activities for Parents*, containing more than 100 individual learning activities written in Spanish and English.

Recent work with low-income parents indicates that they are no less concerned about their children's education than are more advantaged parents. Because of their limited education, resources, and power in the community, low-income parents often do not know how to maximize their children's educational experiences. The parent involvement product is designed to assist parents in these areas by involving parents as partners in the task of helping children reach their potentials. Parent involvement provides information and resources that will help parents to accomplish this task successfully.

The materials are designed for use at home to reinforce what the children have learned in school. Parents learn specific skills so that they feel secure in their own knowledge and develop a greater interest in their children's work. To develop vocabularies and concepts through communication, parents are encouraged to emphasize conversation with their children. The importance of language and communication with adults as the basis for intellectual development is stressed.

More than 100 individual parent activities include pictures, games, and stories which can be used easily in the home. Normal situations are emphasized—cooking dinner or walking to the bus stop can be turned into educational experiences. The product seeks to establish in the parents a positive expectation of the child's ability to achieve. This can greatly accelerate success at school.

SUBJECT AREA(S)

The product has two major functions or elements. The first element is carried out by the teacher, supervisor, or parent involvement agent to insure that the goals of the program are met. These activities include: (1) Making home visits to meet the children and the parents before school begins, (2) conducting an orientation meeting at school for parents, (3) organizing a parent advisory committee (PAC), (4) involving parents in classroom observation, (5) involving parents as participants in classroom activities, and (6) involving parents in field trip activities.

The second element is designed to help parents become more effective teachers of their preschool children. The purpose of this element is to develop the parents' awareness of their teaching roles and to encourage their participation in the formal education of their children.

INTENDED USERS AND BENEFICIARIES

Three-year-old Spanish-speaking children and their parents are the intended users and beneficiaries.

Although designed primarily for 3-year-old Spanish-speaking children and their parents, the program has also been used with English speakers. The developers rate its use with English speakers as "successful."

GOAL(S) OR PURPOSE(S)

The parent involvement product has three goals: (1) To initiate and maintain positive attitudes, interaction, and understanding between home and school regarding early childhood education and parent involvement; (2) to increase the parents' knowledge of community resources and facilities and how these can be used to help meet their needs; and (3) to inform the parents of their children's learning experiences in school.

PATTERNS OF USE

Unit packets are sequential and cumulative, providing a complete program. The activities may also be used independently.

ASSESSMENT PROVISIONS

There is no formal testing. The home activities that the parent performs with the child reinforce what the child has learned at school.

TIME REQUIREMENTS

Each home activity in the parent manual requires approximately 10-15 minutes to complete. The parents are free to spend the amount of time they feel is necessary for each activity. The home activities continue throughout the school year.

806

The parent advisory committee meets once a month throughout the year.

IMPLEMENTATION PROCEDURES

Strategies for implementation of the parent involvement product include:

1. Home visits made by the teacher or the parent involvement agent.
2. Orientation meeting for parents conducted at the school.
3. Organizing a parent advisory committee.
4. Involvement of parents in classroom observation.
5. Involvement of parents as participants in classroom activities.
6. Involvement of parents in field trip activities.
7. Conducting an orientation to the parent education element.
8. Giving demonstration sessions for home activities.

Personnel Required for Product Adoption and Implementation

The home activities for parents is designed to be implemented by a teacher in a bilingual preschool program for 3-year-old children.

ASSURANCES AND CLAIMS

There have been no reports of harm or damage to children or families caused by the use of these materials. The materials have been used in conjunction with the *Bilingual Early Childhood Program, Level I*, but examination of the activities suggests that they are applicable to a variety of settings. The materials are designed for use with Spanish-speaking families, and no data are available either to support or discourage their use with English-speaking families. The materials do not appear to promote any social, sexual, or racial biases; and no complaints of this nature have been received. The printed materials use the generic "he."

INFORMATION CURRENT AS OF MARCH 1975 ■

BILINGUAL EARLY CHILDHOOD PROGRAM (BECP), LEVEL II

A comprehensive learning system for 4-year-old Spanish-speaking children, their teachers, and parents

The *Bilingual Early Childhood Program* (BECP), *Level II*, is a comprehensive learning system for 4-year-old Spanish-speaking children, their teachers and parents. It is part of a 2- or 3-year sequential early childhood program developed by the Southwest Educational Development Laboratory (SEDL). The three products of the learning system are: Materials, staff development, and parental involvement materials. The Level II instructional materials contain 25 instructional units which include six kinds of activities—visual, auditory, motor, ideas and concepts (cognitive), syntax of English, and English vocabulary. The activities are carefully sequenced and integrated to complement and reinforce each other by relating to the unit topic or to a particular skill. Each unit includes 20 to 35 lessons and activities, teacher guidebooks, materials and media required for the activities, and curriculum-based unit and mastery tests. Each instructional unit is built around a single theme such as body awareness or community helpers and is designed to relate meaningfully to the children's previous experiences while expanding their skills and abilities in new situations. The program also provides for relating the children's learning to their home situations through home activities and materials for use by parents. Staff Development provides preservice and inservice training for teachers in the principles of classroom management, teaching strategies, effective use of materials and equipment, testing, and working with parents. The total package provides a comprehensive framework within which children can develop their skills and abilities in Spanish and in English, parents can be involved in the educational process, and teachers can expand their teaching skills.

The BECP, Level II is a developmental program concerned with the general cognitive, psychomotor, and affective stages common to all children. The activities begin with lower order skills and proceed systematically to higher level tasks. Spanish is the language of instruction for the first part of the program, and Spanish continues to be used throughout the program. Once the children have mastered concepts and skills in Spanish, the same concepts are systematically introduced in English. The class is divided into three or four small groups which cycle through alternating periods of direct instruction, assigned independent activities, and self-selected activities. Classroom arrangement and management are integral to the program, and guidelines and procedures for arrangement and management are provided in Staff Development. The curriculum is designed to be used by a bilingual teacher and assistant teacher. Activities and procedures have been designed to promote satisfying interactions between teacher and learner so the children can develop their full intellectual and personal potentials and can learn to function comfortably and competently in two languages.

Teacher guidebooks in both English and Spanish are provided, and the recommended language of instruction is specified for each lesson. Instructional units contain such multimedia materials as puzzles, transparencies, filmstrips, records, games, line drawings, and photographs. They also include curriculum-based unit mastery tests that enable teachers to monitor the children's progress.

SUBJECT AREA(S)

The three parts of the BECP, Level II are instructional materials, staff development and parent involvement.

The instructional materials are organized into 25 instructional units built around a single theme or topic. Each unit contains 20-35 planned activities designed to teach the 6 instructional elements: visual, auditory, motor, ideas and concepts, syntax of English, and building vocabulary.

Staff Development provides for a comprehensive preservice teacher training workshop and for continuing inservice training. Teacher manuals, some accompanied by filmstrips, form the basic materials for staff development. Extensive materials are also provided for administrators and supervisors.

Through parent involvement, the program relates school learning to the home and involves the children's parents in the educational process. *School and After: Parents Help* (a manual for the teacher) and *Home Activities for Parents* (over 100 learning activities to be conducted at home and geared to the BECP, Level II curriculum activities) comprise the parent involvement materials.

INTENDED USERS AND BENEFICIARIES

For instructional materials, intended users are 4-year old Spanish-speaking children from low-income families. Four-year-olds who have completed the BECP, Level I (for 3-year-olds) may complete the early units more quickly than entering 4-year-olds.

For staff development, bilingual teachers and assistant teachers who are using the BECP, Level II curriculum are the intended users. Staff development activities are conducted by the supervisor.

For parent involvement, parents and other family members whose children are enrolled in the BECP, Level II are the intended users.

GOAL(S) OR PURPOSE(S)

The goals are: (1) To develop the child's sensory-perceptual skills, (2) to develop the child's language skills in both English and Spanish, (3) to develop the child's thinking and reasoning abilities, and (4) to help the child develop a positive self-concept.

PATTERNS OF USE

In all its aspects the BECP, Level II moves sequentially from what the children know to what they do not know. Language and concept development are systematically incorporated throughout each instructional element. Concepts appear first in Spanish, then in English; content begins with concrete objects, moves to pictures and two-dimensional representations, and concludes with the use of words only. Within each skill level, the children build gradually, in small steps, adding new skills or learning new applications for skills acquired in other contexts. Because of the systematic buildup and integration of skills, it is essential that the instructional units be presented in order.

The program cannot be implemented effectively without the staff development materials. The 5-day preservice workshop is essential, along with continuing teacher training provided in the teacher manuals. Details of teacher training are left to the supervisor.

The parent involvement materials are implemented by the classroom teacher with assistance from the supervisor. Use of this product is optional.

ASSESSMENT PROVISIONS

For instructional materials, curriculum-based criterion referenced unit and mastery tests are provided to enable the teacher to monitor each child's progress.

For staff development, mastery questions keyed to each teacher's manual are provided as a guide to reading and to enable the supervisor to assess teachers' understanding of the materials.

For parent involvement, no provisions are made for assessment.

TIME REQUIREMENTS

For instructional materails, the curriculum is an all-day program for 1 school year. Adaptation is provided for 1/2-day programs which may not complete all 25 units. The curriculum has also been used in migrant programs which do not meet for 1 complete school year.

For staff development, 5 days is the absolute minimum for the preservice training; 10 or more days is recommended. In addition, at least 2 hours per week of inservice training is recommended. Teachers also require at least 45 minutes per day for planning and preparation.

For parent involvement, no provisions are made for assessment.

IMPLEMENTATION PROCEDURES

1. No more than 20 children should be enrolled in each class.
2. Children should be from economically disadvantaged backgrounds.
3. The dominant language of a majority of each class should be Spanish. (The activities may be taught in either English or Spanish, but their sequencing and difficulty may not be appropriate for native English speakers.)
4. Each class must have one teacher and one assistant teacher, both of whom should be bilingual.
5. It is strongly recommended that 1 full-time supervisor be assigned for each 10 classrooms.
6. The local supervisors should participate in a 7- to 10-day preservice workshop designed to train them to install the program and to conduct preservice and inservice teacher training.
7. A 5-day preservice workshop for teachers should be held at each site before instructional activities begin. Materials for the workshop are provided.
8. Staff development supervisors generally will spend approximately 1-1/2 to 3 hours each day observing in classrooms.
9. Two to three hours per week should be allotted for teacher inservice training. In addition, teachers and assistant teachers should have at least 45 minutes per day for planning and preparation. This time must be scheduled so the teaching team can plan together.

Personnel Required for Product Adoption and Implementation

The instructional materials part is designed to be taught by a professional and a paraprofessional, both of whom are bilingual. Parent involvement is also implemented by this teaching team.

Staff development is implemented by a supervisor. It is recommended that staff development supervisors obtain the site staff development materials and attend a workshop for supervisors conducted by the publisher.

ASSURANCES AND CLAIMS

Assurances

There have been no reports or complaints of harm or damage resulting from the use of the BECP, Level II curriculum. This assurance is supported by feedback from teachers in 275 field test classrooms and from field test results. Children enrolled in the field test version of this program performed as well as monolingual English speakers on standardized tests.

No complaints relating to social, sexual, racial, or other biases have been received from teachers using either the field test or the revised published version. Though there have been no complaints, the materials do make use of the generic "he" to refer to the child and "she" to refer to the teacher.

In the field test, 275 test classrooms implemented the program with developer assistance for the staff development component. An additional 169 classrooms have installed the revised published program with no developer intervention.

Claims

Children enrolled in field test classes made significant gains on curriculum-based criterion-referenced tests. This was true for all instructional elements except auditory. Project children also made significant pretest-to-posttest gains on a standardized test of general cognitive abilities. Some children also were administered an attitude inventory designed to assess their feelings about school. They responded favorably to all but one aspect measured by the inventory. A user satisfaction questionnaire administered to field test teachers indicated, with few exceptions, general satisfaction with the program. Subsequent to field test, program revisions were made to improve the product's effectiveness. Data from the revised published version, available from one site only, indicated that pupils successfully mastered the curriculum content, based upon data from the curriculum-based criterion-referenced tests.

The BECP, Level II, curriculum was developed according to the product development process used by Southwest Educational Development Laboratory (SEDL). This process includes the following stages: (1) Context analysis, (2) conceptual design, (3) product design and design test, (4) pilot test, (5) field test, and (6) dissemination. At each stage, the product is evaluated and revised. The published version contains revisions indicated by results from the field test. Since the initial product design, the product has been tested over a 4-year period in a total of 416 classrooms.

The BECP, Level II curriculum is the only replicable, comprehensive bilingual program presently available for 4-year-olds.

BILINGUAL EARLY CHILDHOOD PROGRAM (BECP), LEVEL II, INSTRUCTIONAL MATERIALS

A developmentally oriented program concerned with mastery of skills and concepts among 4-year-old Spanish-speaking children

The *Bilingual Early Childhood Program, Level II, Instructional Materials* (BECP), guides are designed for use with 4-year-old Spanish-speaking children. The program is developmentally oriented, and is concerned with the general cognitive, psychomotor, and affective stages common to all children. It emphasizes mastery of skills and concepts in six major areas—visual, auditory, motor, ideas and concepts, syntax of English, and vocabulary. Activities involving these content or skill areas are organized into 25 instructional units built around a single theme or topic such as "Community Workers" and "Musical Instruments." The activities are carefully sequenced and integrated to complement and reinforce each other by relating to the unit topic or to a particular skill. Each unit includes 20 to 35 lessons and activities, teacher's guidebooks in Spanish and in English, materials and media for the activities, and instructionally based unit and mastery tests. Unit topics are designed to relate meaningfully to the children's previous experiences while expanding their skills and abilities in new situations. Activities begin with lower order skills and proceed systematically to higher level tasks. Spanish is the language of instruction for the first part of the program, and Spanish continues to be used throughout. Once the children have mastered concepts and skills in Spanish, the same concepts are systematically introduced in English. The class is divided into three or four small groups which cycle through alternating periods of direct instruction, assigned independent activities, and self-selected activities. The curriculum is to be taught by a bilingual teacher and a bilingual assistant teacher. Activities and procedures have been designed to promote satisfying interactions between teacher and learner so that the children can develop their full intellectual and personal potentials and can learn to function comfortably and competently in two languages.

SUBJECT AREA(S)

Each of the 25 instructional units contains 20 to 35 planned lessons and activities utilizing puzzles, transparencies, filmstrips, audiotapes, games, line drawings, posters, and photographs. Unit content has been designed to build upon the children's prior knowledge while introducing new concepts. The units familiarize the children with concepts in several kinds of lessons and promote their application to various contexts to assure transfer and generalization of learning. For example, the concept of color is introduced in the visual element in early units through simple matching exercises. In later units, color labels are taught in a strand of auditory activities. The concept of color is reinforced in the ideas and concepts element where the children are expected to describe or classify objects according to color. Unit topics are as follows:

Unit 1. School (la escuela)
Unit 2. Body awareness (conciencia del "yo" físico)
Unit 3. Animals (animales)
Unit 4. Vehicles (vehículos)
Unit 5. Clothing (ropa)
Unit 6. Musical instruments (instrumentos musicales)
Unit 7. Food (comida)
Unit 8. Community workers (trabajodores de la comunidad)
Unit 9. Tools (herramientas)
Unit 10. Family (la familia)
Unit 11. Buildings (edificios)
Unit 12. Money (dinero)
Unit 13. Toys (juguetes)
Unit 14. Furniture (muebles)
Unit 15. Wild animals (animales salvajes)
Unit 16. Fish, birds, and insects (peces, pájaros, y insectos)
Unit 17. Family (la familia)
Unit 18. Food (comida)
Unit 19. Clothing (ropa)
Unit 20. Furniture (muebles)
Unit 21. Tools (herramientas)
Unit 22. Buildings (edificios)
Unit 23. Plants (plantas)
Unit 24. Checklist (inventario)
Unit 25. Checklist (inventario)

INTENDED USERS AND BENEFICIARIES

Four-year-old Spanish speakers from low-income families are the intended users. Four-year-olds who have completed the BECP, Level I (for 3-year-olds), may complete the early units more quickly than entering 4-year-olds.

Although designed primarily for 4-year-old Spanish-speaking children and their teachers, the product has also been used with English speakers. The developers rate its use with English speakers as "successful," but field test data supporting this claim have not been collected.

GOAL(S) OR PURPOSE(S)

The goals of this program are: (1) To develop the child's sensory-perceptual skills, (2) to develop the child's language skills in both English and Spanish, (3) to develop the child's thinking and reasoning abilities, and (4) to help the child develop a positive self-concept.

PATTERNS OF USE

In all its aspects the BECP, Level II, moves sequentially from what the children know to what they do not know. Language and concept development is systematically incorporated throughout each instructional element. Concepts appear first in Spanish, then in English; content begins with concrete objects, moves to pictures and two-dimensional representations, and concludes with the use of words only. Within each skill level, the children build gradually, in small steps, adding new skills or learning new applications for skills acquired in other contexts. Because of the systematic buildup and integration of skills, it is essential that the instructional units be presented in order.

ASSESSMENT PROVISIONS

The BECP, Level II, contains the following curriculum-based criterion-referenced tests: Unit tests to assess the child's ability to meet the objectives of unit activities, mastery tests to assess the child's mastery of concepts and skills over an 8-unit interval, and pretests and posttests.

TIME REQUIREMENTS

One school year in an all-day program is required. Adaptation is provided for 1/2-day programs which may not complete all 25 units. The curriculum has also been used in migrant programs which do not meet for a complete school year.

IMPLEMENTATION PROCEDURES

1. No more than 20 children should be enrolled in each class.
2. Children should be from economically disadvantaged backgrounds.
3. The dominant language of a majority of each class should be Spanish. (The activities may be taught in either English or Spanish, but their sequencing and difficulty may not be appropriate for native English speakers.)
4. Each class must have one teacher and one assistant teacher, both of whom should be bilingual.
5. It is strongly recommended that 1 full-time supervisor be assigned for each 10 classrooms.
6. The local supervisors should participate in a 7- to 10-day preservice workshop designed to train them to install the program and to conduct preservice and inservice teacher training.
7. A 5-day preservice workshop for teachers should be held at each site before instructional activities begin. Materials for the workshop are provided.
8. Staff development supervisors generally will spend approximately 1-1/2 to 3 hours each day observing in classrooms.
9. Two to three hours per week should be allotted for teacher inservice training. In addition, teachers and assistant teachers should have at least 45 minutes per day for planning and preparation. This time must be scheduled so that the teaching team can plan together.

Personnel Required for Product Adoption and Implementation

The curriculum requires a bilingual teacher and a bilingual assistant teacher for each classroom and a supervisor for each 10 classrooms.

ASSURANCES AND CLAIMS

The BECP, Level II, was tested over a 5-year period in rural and urban classrooms in which children from Spanish-speaking homes were enrolled. These classrooms included a high concentration of children from low-income families. Children of migrant agricultural workers have also participated in the program. Extensive feedback was collected from teachers, supervisors, and others working with the program; there have been no reports of harm or damage to children caused by use of the instructional materials.

The instructional materials are designed to be relevant to the cultural, social, and linguistic experiences of Spanish-speaking children, particularly Mexican-American children of the Southwest. The product has also been implemented in several northern and midwestern cities where there are a large number of Puerto Rican children. Data have not been collected on the use of the program for middle-income children or native English speakers. The materials make use of the generic "he" to refer to the child, and "she" to refer to the teacher.

The product has been installed in sites across the country without the direct intervention of the developers except for preservice training and consultation at the request of the users.

BILINGUAL EARLY CHILDHOOD PROGRAM (BECP), LEVEL II, STAFF DEVELOPMENT

A comprehensive model for teacher training, both preservice and inservice

The *Bilingual Early Childhood Program* (BECP), *Level II, Staff Development* is a comprehensive model for teacher training, both preservice and inservice. It contains five teacher's manuals, accompanying filmstrips, a supervisor's manual, and an administrator's handbook. Three of the teacher's manuals form the basis for a preservice workshop conducted by the supervisor. This workshop is a comprehensive introduction for new teachers. It includes filmstrips which demonstrate model lessons and classroom arrangements. The workshop is performance based, emphasizing demonstration, role playing, and practicing of teaching skills. The supervisor's manual contains detailed instructions for conducting the workshop, including grouping and pairing of teachers, leading discussions, providing feedback, and adapting the workshop to meet the needs of more experienced teachers. The supervisor's manual also contains guidelines for implementing a bilingual preschool program including instructions for hiring and supervising teachers, providing resources for teachers, observing in the classroom, and performing other administrative and supervisory functions.

Continuing inservice teacher training is provided through the use of the remaining two teacher's manuals. These manuals cover such topics as teacher expectations, incidental learning and modeling, adapting the program to meet children's individual needs, and effective use of equipment in a bilingual preschool program. Detailed instructions for conducting inservice training are included in the supervisor's manual.

SUBJECT AREA(S)

Staff development materials include several hours of demonstration filmstrips on classroom and lesson preparation, lesson presentation, and testing, plus the following manuals and booklets:

1. Administrator's handbook: Overview of the program and information for superintendents, principals, and other school administrators.
2. Supervisor's manual: How to conduct the performance-based preservice teacher training workshop.
3. Preserive manual—volume 1: How the curriculum elements fit together, rationale and goals underlying the entire program and each of the individual elements; general program information, teacher roles and responsibility; lists of basic early childhood equipment.
4. Preservice manual—volume 2: Detailed information about small-group instruction; sample visual, auditory, motor, ideas and concepts, and syntax of English lessons; how to prepare and administer unit and mastery tests; how to use test information to plan remedial teaching; how to organize the classroom and plan activities so that control and discipline problems are minimized.
5. Preservice manual—volume 3: How to set up and equip various learning centers in the preschool classroom.
6. Inservice manual—volume 1: Practical suggestions for setting up effective learning situations and for responding to children in various situations; how teacher attitudes and expectations can influence success and failure in the classroom; how to teach through example and modeling in addition to more formal instruction; and what to do when a child does not meet the objective of a lesson.
7. Inservice manual—volume 2: How to demonstrate the uses of manipulative equipment to the children and how to help the children learn to use the equipment independently.

INTENDED USERS AND BENEFICIARIES

Administrators, supervisors, teachers, and assistant teachers of Spanish-speaking 4-year-olds are the intended users.

GOAL(S) OR PURPOSE(S)

Preservice training goals are: (1) To train the teacher in setting up a preschool classroom for maximum program effectiveness; (2) to instruct the teacher in methods of demonstrating and teaching with classroom materials and equipment; (3) to develop teacher skills in classroom assessment of children's learning; (4) to demonstrate and simulate ways of instructing young children; and (5) to assist the teacher in planning, scheduling, and managing classroom activities.

Inservice training goals are: (1) To instruct the teacher in ways of identifying and assisting children who demonstrate problems in learning, (2) to develop the teacher awareness of the ways children learn from modeled behavior, (3) to develop teacher awareness of the effect of negative and positive expectations on the behavior of children, and (4) to further develop the teacher's ability to maximize the learning which can occur through the use of classroom materials.

PATTERNS OF USE

Staff development is presented to the school personnel in two forms, as preservice training and as inservice training.

The preservice training model has been developed for use in a 1-week (5-day) workshop intended to help new teachers make a smooth start. The workshop is designed on the assumption that the teachers have little or no prior knowledge or experience in the program. Emphasis is placed on the instructional model, rationale, and practice in teaching and classroom organization techniques.

The 5-day workshop is an absolute minimum training requirement. It is used as a model only because 5 days is the maximum time available for preservice training in many school districts.

The model workshop for new teachers has been planned with several criteria in mind. First, the workshop stresses the knowledge and skills required for preparing the classroom and getting the school year off to a good start. Knowledge and skills which will be important later have been left for treatment during future inservice training.

The differing concerns of teachers with different levels of experience with the product have also been taken into account. Teachers just beginning to use the product are primarily concerned about what they have to do and how they should do it. Once they have mastered the basic instructional model and the necessary teaching techniques, they become more concerned about the rationales underlying the techniques and about how to adapt the basic model to meet the needs of individual children. Therefore, the workshop concentrates primarily on presenting the basic model and on providing practice with the basic techniques, leaving analysis and discussion of rationales and adaptation problems for later inservice meetings and workshops.

The preservice workshop is ordinarily conducted by the supervisor, although others may also be involved. The term "trainer" is used to refer to the supervisor or anyone else who has responsibility for planning and leading one or more workshop sessions.

Two or three hours per week for inservice training is strongly recommended, especially for new teachers. In addition, teachers and assistant teachers should have a minimum of 45 minutes per day together to plan their activities for the following day.

It is also recommended that staff development supervisors spend approximately 1-1/2 to 3 hours each day observing in classrooms at the beginning of the year.

ASSESSMENT PROVISIONS

There is no formal testing. Teacher evaluation is an ongoing part of the supervisor's activities with observational checklists provided.

The preservice training model workshop is heavily performance based in its methods and objectives. Participants are expected not merely to read about and discuss their roles in the program, but also to show that they understand and can perform the behaviors associated with those roles. They practice teaching lessons, giving equipment demonstrations, making out schedules, planning related activities, making smooth transitions, and setting up their classrooms.

TIME REQUIREMENTS

The preservice workshop requires a minimum of 5 days, 6 hours per day. Inservice training is an ongoing activity consisting of 2 to 3 hours of training per week throughout the school year. In addition, the teacher-assistant teacher team should have a minimum of 45 minutes each day to plan for the following day.

The supervisor will visit the classrooms approximately 1-1/2 to 3 hours per week to observe during the first part of the year.

IMPLEMENTATION PROCEDURES

The requirements for effective presentation and use of the staff development product are as follows:

1. During the first year of the program, it is strongly recommended that 1 full-time supervisor be assigned for each 10 classrooms to assist with regular and continuous staff development.
2. The local supervisor will participate in a 7- to 10-day preservice workshop for supervisors, designed specifically to train them to install the program and to conduct preservice and inservice teacher training.
3. A 5-day preservice workshop for teachers will be held at each site before instructional activities begin.
4. Staff development supervisors generally will spend approximately 1-1/2 to 3 hours each day observing in classrooms.
5. Teachers should be given 2 or 3 hours per week for inservice training, as well as daily planning time.

ASSURANCES AND CLAIMS

No reports of harm or damage to teachers or children resulting from use of the staff development activities were reported.

All materials in the *Bilingual Early Childhood Program, Level II*, including the staff development materials, were designed to be relevant to the cultural, social, and linguistic experiences of Spanish speakers. It is recognized, however, that teachers may or may not share these experiences, and the teacher materials do not assume a particular background or heritage. The generic "she" is used to refer to the teacher and the supervisor, and "he" is used to refer to the child.

BILINGUAL EARLY CHILDHOOD PROGRAM (BECP), LEVEL II, PARENT INVOLVEMENT

A set of parent activities designed for use at home to reinforce what the children have learned in school

The parent involvement product is comprised of the following materials: A teacher's manual, *School and After: Parents Help*, a filmstrip with audiorecording, "School and After: Parents Help," and a parent's manual, *Home Activities for Parents*, containing 60 individual learning activities written in Spanish and English.

Recent work with low-income parents indicates that they are no less concerned about their children's education than are more advantaged parents. Because of their limited education, resources, and power in the community, low-income parents often do not know how to maximize their children's educational experiences. The parent involvement product is designed to assist parents in these areas by involving parents as partners in the task of helping children reach their potentials. Parent involvement provides information and resources that will help parents to accomplish this task successfully.

No early childhood education program can fully achieve its goals without support from parents.

The materials are designed for use at home to reinforce what the children have learned in school. Parents learn specific skills so that they feel secure in their own knowledge and develop a greater interest in their children's work. To develop vocabularies and concepts through communication, parents are encouraged to emphasize conversation with their children. The importance of language and communication with adults as the basis for intellectual development is stressed.

More than 100 individual parent activities include pictures, games, and stories which can be used easily in the home. Normal situations are emphasized—cooking dinner or walking to the bus stop can be turned into educational experiences. The product seeks to establish in the parents a positive expectation of the child's ability to achieve. This can greatly accelerate success at school.

SUBJECT AREA(S)

The product has two major functions or elements. The first element involves parents in the school setting and is carried out by the teacher, supervisor, or parent involvement agent to insure that the goals of the program are met. These activities include: (1) Making home visits to meet the children and the parents before school begins, (2) conducting an orientation meeting at school for parents, (3) organizing a parent advisory committee (PAC), (4) involving parents in classroom observation, (5) involving parents as participants in classroom activities, and (6) involving parents in field trip activities.

The second element is designed to help parents become more effective teachers of their preschool children. The purpose of this element is to develop the parents' awareness of their teaching roles and to encourage their participation in the formal education of their children.

INTENDED USERS AND BENEFICIARIES

Five-year-old Spanish-speaking children and their parents are the intended users and beneficiaries.

Although designed primarily for 5-year-old Spanish-speaking children and their parents, the program has also been used with English speakers. The developers rate its use with English speakers as "successful," but field test data supporting this claim have not been collected due to lack of funding.

GOAL(S) OR PURPOSE(S)

The parent involvement product has three goals: (1) To initiate and maintain positive attitudes, interaction, and understanding between home and school regarding early childhood education and parent involvement, (2) to increase the parents' knowledge of community resources and facilities and how these can be used to help meet their needs, and (3) to inform the parents of their children's learning experiences in school.

PATTERNS OF USE

Unit packets are sequential and cumulative, providing a complete program. The activities may also be used independently.

ASSESSMENT PROVISIONS

There is no formal testing. The home activities that the parent practices with the child reinforce what the child has learned at school.

TIME REQUIREMENTS

Each home activity in the parent manual requires approximately 10-15 minutes to complete. The parents are free to spend the amount of time they feel is necessary for each activity. The home activities continue throughout the school year.

The parent advisory committee meets once a month throughout the year.

IMPLEMENTATION PROCEDURES

Strategies for implementation of the Parent Involvement product include:

1. Home visits made by the teacher or the parent involvement agent.
2. Orientation meeting for parents conducted at the school.
3. Organizing a parent advisory committee.
4. Involvement of parents in classroom observation.
5. Involvement of parents as participants in classroom activities.
6. Involvement of parents in field trip activities.
7. Conducting an orientation to the parent education element.
8. Giving demonstration sessions for home activities.

Personnel Required for Product Adoption and Implementation

The home activities for parents are designed to be implemented by a teacher in a bilingual preschool program for 4-year-old children.

ASSURANCES AND CLAIMS

There have been no reports of harm or damage to children or families caused by the use of these materials. The materials have been used only in conjunction with the *Bilingual Early Childhood Program, Level II*, but examination of the activities suggests that they are applicable to a variety of settings. The materials are designed for use with Spanish-speaking families, and no data are available either to support or discourage their use with English-speaking families. The materials do not appear to promote any social, sexual, or racial biases; and no complaints of this nature have been received. The printed materials use the generic "he."

BILINGUAL EARLY CHILDHOOD PROGRAM (BECP), LEVEL III

*A comprehensive learning system for 3-year-old
Spanish-speaking children, their teachers, and parents*

The *Bilingual Early Childhood Program* (BECP), *Level III*, is a comprehensive learning system for 5-year-old Spanish-speaking children, their teachers, and parents. It is the final part of a 3-year sequential early childhood product developed by the Southwest Educational Development Laboratory (SEDL). The three components of the learning system are: Instructional Materials, Staff Development, and Parent Involvement. The Level III instructional materials contain 20 instructional units which include 8 kinds of activities: Visual, auditory, motor, ideas and concepts (cognitive), syntax of English, English vocabulary, prewriting, and exploring and discovering. The activities are carefully sequenced and integrated to complement and reinforce each other by relating to the unit topic or to a particular skill. Each unit includes 20-35 lessons and activities, teacher guidebooks, materials and media required for the activities, and curriculum-based unit and mastery tests. Each instructional unit is built around a single theme, such as body awareness or community helpers, and is designed to relate meaningfully to the children's previous experiences while expanding their skills and abilities in new situations. The product also provides for relating the children's learning to their home situations through home activities and materials for use by parents. The staff development component provides preservice and inservice training for teachers in the principles of classroom management, teaching strategies, effective use of materials and equipment, testing, and working with parents. The total package provides a comprehensive framework within which children can develop their skills and abilities in Spanish and English, parents can be involved in the educational process, and teachers can expand their teaching skills.

The program is a developmental product concerned with the general cognitive, psychomotor, and affective stages common to all children. The activities begin with lower order skills and proceed systematically to higher level tasks. Spanish is the language of instruction for the first part of the program, and Spanish continues to be used throughout the program. Once the children have mastered concepts and skills in Spanish, the same concepts are systematically introduced in English. The class is divided into three or four small groups which cycle through alternating periods of direct instruction, assigned independent activities, and self-selected activities. Classroom arrangement and management are integral to the program, and guidelines and procedures for arrangement and management are provided in the staff development component. The instructional materials are designed to be used by a bilingual teacher and a bilingual assistant teacher. Activities and procedures have been designed to promote satisfying interactions between teacher and learner so that the children can develop their full intellectual and personal potentials and can learn to function comfortably and competently in two languages.

Teacher guidebooks in both English and Spanish are provided, and the recommended language of instruction is specified for each lesson. Instructional units contain such multimedia materials as puzzles, transparencies, filmstrips, records, games, line drawings, and photographs. They also include curriculum-based unit mastery tests that enable teachers to monitor the children's progress.

SUBJECT AREA(S)

The three products of the *Bilingual Early Childhood Program, Level III* are instructional materials, staff development, and parent involvement.

The instructional materials are organized into 20 instructional units built around a single theme or topic. Each unit contains from 20 to 30 planned activities designed to teach the 8 instructional elements: Visual, auditory, motor, ideas and concepts, syntax of English, building vocabulary, prewriting, and exploring and discovering. The materials include the following unit topics:

Unit 1: School (La escuela)
Unit 2: School Safety (Seguridad en la escuela)
Unit 3: Community Helpers (Ayudantes de la comunidad)
Unit 4: Community Helpers (Ayudantes de la comunidad)
Unit 5: Body Awareness (Conciencia del "yo" físico)

Unit 6: Body Senses (Los sentidos del cuerpo)
Unit 7: Clothing (Ropa)
Unit 8: Food (Comida)
Unit 9: Health (La salud)
Unit 10: Toys (Juguetes)
Unit 11: Family (La familia)
Unit 12: Classroom Environment (Ambiente de la sala de clase)
Unit 13: Toys (Juguetes)
Unit 14: Transportation (Transportación)
Unit 15: Materials (Materiales)
Unit 16: Plants (Plantas)
Unit 17: Animals (Animales)
Unit 18: School (La escuela)
Unit 19: Self-Awareness (Conciencia de sí mismo)
Unit 20: Checklist (Inventario)

INTENDED USERS AND BENEFICIARIES

Curriculum—5-year-old Spanish-speaking children from low-income families who have completed the BECP, level III for 4-year-olds. A separate program (Bilingual K) is available for entering 5-year-olds.

Staff Development—Bilingual teachers and assistant teachers who are using the BECP, level III instructional materials. Staff development activities are conducted by the supervisor.

Parent Involvement—Parents and other family members whose children are enrolled in the BECP, level III.

GOAL(S) OR PURPOSE(S)

The major goals of the program are: (1) To develop the child's sensory-perceptual skills, (2) to develop the child's language skills in both English and Spanish, (3) to develop the child's thinking and reasoning abilities, and (4) to help the child develop a positive self-concept.

PATTERNS OF USE

In all its aspects, the program moves sequentially from what the children know to what they do not know. Language and concept development is systematically incorporated throughout each instructional element. Concepts appear first in Spanish, then in English; content begins with concrete objects, moves to pictures and two-dimensional representations, and concludes with the use of words only. Within each skill level, the children build gradually, in small steps, adding new skills or learning new applications for skills acquired in other contexts. Because of the systematic buildup and integration of skills, it is essential that the instructional units be presented in order.

The program cannot be implemented effectively without the staff development product. The 5-day preservice workshop is essential along with continuing teacher training provided in the teacher's manuals. Details of teacher training are left to the supervisor.

The parent involvement product is implemented by the classroom teacher with assistance from the supervisor. Use of this product is optional.

ASSESSMENT PROVISIONS

Instructional Materials—Curriculum-based, criterion-referenced unit and mastery tests are provided to enable the teacher to monitor each child's progress.

Staff Development—Mastery questions keyed to each teacher's manual are provided as a guide to reading and to enable the supervisor to assess teachers' understanding of the materials.

Parent Involvement—There are no provisions for assessment.

TIME REQUIREMENTS

Instructional Materials—1 school year in an all-day program. Adaptation is provided for half-day programs which may not complete all 20 units. The curriculum has also been used in migrant programs which do not meet for a complete school year.

Staff Development—Five days is the absolute minimum for the preservice training; 10 or more days are recommended. In addition, at least 2 hours per week of inservice training is recommended. Teachers also require at least 45 minutes per day for planning and preparation.

Parent Involvement—There is no time requirement. Home activities take from 10 to 15 minutes.

IMPLEMENTATION PROCEDURES

1. Not more than 25 children should be enrolled in each class.
2. Children should be from economically disadvantaged backgrounds.
3. The dominant language of a majority of each class should be Spanish. (The activities may be taught in either English or Spanish, but their sequencing and difficulty may not be appropriate for native English speakers.)
4. Each class must have one teacher and one assistant teacher, both of whom should be bilingual.
5. It is strongly recommended that 1 full-time supervisor be assigned for each 10 classrooms.
6. The local supervisors will participate in a 7- to 10-day preservice workshop designed to train them to install the program and to conduct preservice and inservice teacher training.
7. A 5-day preservice workshop for teachers should be held at each site before instructional activities begin. Materials for the workshop are provided.
8. Staff development supervisors generally will spend approximately 1-1/2 to 3 hours each day observing in classrooms.
9. Two to three hours per week should be allotted for teacher inservice training. In addition, teachers and assistant teachers should have at least 45 minutes per day for planning and preparation. This time must be scheduled so that the teaching team can plan together.

Personnel Required for Product Adoption and Implementation

The BECP, level III is designed to be taught by a professional teacher and a paraprofessional assistant teacher, both of whom are bilingual. The parent involvement product is also implemented by this teaching team.

The staff development product is implemented by a supervisor of teachers. Field test supervisors have a variety of backgrounds and training. It is recommended that staff development supervisors obtain the site staff development materials and attend a workshop for supervisors conducted by the publisher.

ASSURANCES AND CLAIMS

Assurances

There have been neither reports nor complaints of harm or damage resulting from the use of the BECP, level III curriculum. This assurance is supported by feedback from teachers in 34 field test classrooms and from field test results. The harmlessness of using the bilingual approach to teach Spanish-speaking children is demonstrated by those pupils enrolled in the field test version of this program who performed as well as monolingual English speakers on standardized tests.

No complaints relating to social, sexual, racial, or other biases have been received from teachers using either the field test or the revised published version. Although there have been no complaints, the materials do make use of the generic "he" to refer to the child and "she" to refer to the teacher.

In the field test, 34 classrooms implemented the program with developer assistance for the staff development component only. An additional 16 classrooms have installed the revised published program with no developer assistance.

Claims

Children enrolled in field test classes made significant gains from pretest to posttest on a standardized measure of general cognitive functioning. Some children outperformed an English-speaking comparison group on this measure. Nonmigrant pupils demonstrated a significant gain in positive attitudes toward school on a measure of school attitudes. An attitude inventory administered only to migrant pupils indicated pupil satisfaction with all but one aspect measured by the inventory. A user satisfaction questionnaire administered to field test teachers indicated, with few exceptions, general satisfaction with the program. Subsequent to field testing, program revisions were made to improve the product's effectiveness. Data from the revised published version are not available.

The BECP, level III curriculum was developed according to the product development process used by SEDL. This process includes the following stages: (1) Context analysis, (2) conceptual design, (3) product design and design test, (4) pilot test, (5) field test, and (6) dissemination. At each stage, the product is evaluated and revised. The published version contains revisions indicated by results from the field test. Since the initial product design, the product has been tested over a 4-year period in a total of 63 classrooms.

BILINGUAL EARLY CHILDHOOD PROGRAM (BECP), LEVEL III, INSTRUCTIONAL MATERIALS

A developmentally oriented program for 5-year-old Spanish-speaking children, concerned with mastery of skills and concepts in eight major areas

The *Bilingual Early Childhood Program* (BECP), *Level III, Instruction Materials* guides are designed for use with 5-year-old Spanish-speaking children. The program is developmentally oriented, concerned with the general cognitive, psychomotor, and affective stages common to all children. It emphasizes mastery of skills and concepts in eight major areas—visual, auditory, motor, ideas and concepts, syntax of English, vocabulary, prewriting, and exploring and discovering. Activities involving these content or skill areas are organized into 20 instructional units built around a single theme or topic such as community helpers and transportation. The activities are carefully sequenced and integrated to complement and reinforce each other by relating to the unit topic or to a particular skill. Each unit includes 20 to 35 lessons and activities, teacher guidebooks in Spanish and in English, materials and media for the activities, and curriculum-based unit and mastery tests. Unit topics are designed to relate meaningfully to the children's previous experiences while expanding their skills and abilities in new situations. Activities begin with lower order skills and proceed systematically to higher level tasks. Spanish is the language of instruction for the first part of the program, and Spanish continues to be used throughout. Once the children have mastered concepts and skills in Spanish, the same concepts are systematically introduced in English. The class is divided into three or four small groups which cycle through alternating periods of direct instruction, assigned independent activities, and self-selected activities. The instructional materials are to be taught by a bilingual teacher and a bilingual assistant teacher. Activities and procedures have been designed to promote satisfying interactions between teacher and learner so that the children can develop their full intellectual and personal potential and can learn to function comfortably and competently in two languages.

SUBJECT AREA(S)

Each of the 20 instructional units contains 20-35 planned lessons and activities utilizing puzzles, transparencies, filmstrips, audiotapes, games, line drawings, posters, and photographs. Unit content has been designed to build upon the children's prior knowledge while introducing new concepts. The units familiarize the children with concepts in several kinds of lessons and promote their application to various contexts to assure transfer and generalization of learning. For example, the concept of color is introduced in the visual element in early units through simple matching exercises. In later units, color labels are taught in a strand of auditory activities. The concept of color is reinforced in the Ideas and Concepts element where the children are expected to describe or classify objects according to color. Each unit is available in Spanish and English. Unit topics are as follows:

Unit 1: School (La Escuela)
Unit 2: School Safety (Seguridad en la Escuela)
Unit 3: Community Helpers (Ayudantes de la Comunidad)
Unit 4: Community Helpers (Ayudantes de la Comunidad)
Unit 5: Self-Concept (Concepto de Sí Mismo)
Unit 6: Body Senses (Los Sentidos del Cuerpo)
Unit 7: Clothing (La Ropa)
Unit 8: Food (La Comida)
Unit 9: Health (La Salud)
Unit 10: Toys (Los Juguetes)
Unit 11: Family (La Familia)
Unit 12: Classroom Environment (Ambiente de la Sala de Clase)
Unit 13: Community Environment (Ambiente de la Comunidad)
Unit 14: Transportation (Los Transportes)
Unit 15: Materials (Materiales)
Unit 16: Plants (Las Plantas)
Unit 17: Animals (Los Animales)
Unit 18: School (La Escuela)
Unit 19: Self-Awareness (Conciencia de Sí Mismo)
Unit 20: Checklist (Inventario)

INTENDED USERS AND BENEFICIARIES

Five-year-old Spanish speakers from low-income families who have completed the BECP, level III, are the intended users, BECP, level III, is not appropriate for entering 5-year-olds, for whom a separate program (Bilingual K) has been developed.

GOAL(S) OR PURPOSE(S)

The goals are: (1) To develop the child's sensory-perceptual skills, (2) to develop the child's language skills in both English and Spanish, (3) to develop the child's thinking and reasoning abilities, and (4) to help the child develop a positive self-concept.

PATTERNS OF USE

In all its aspects the BECP, Level III,moves sequentially from what the children know to what they do not know. Language and concept development are systematically incorporated throughout each instructional element. Concepts appear first in Spanish, then in English; content begins with concrete objects, moves to pictures and two-dimensional representations, and concludes with the use of words only. Within each skill level, the children build gradually, in small steps, adding new skills or learning new applications for skills acquired in other contexts. Because of the systematic buildup and integration of skills, it is essential that the instructional units be presented in order.

ASSESSMENT PROVISIONS

The BECP, Level III,contains the following curriculum-based orientation referenced tests: Unit tests to assess the child's ability to meet the objectives of unit activities and mastery tests to assess the child's mastery of concepts and skills over an eight-unit interval. Pretests and posttests are also included.

TIME REQUIREMENTS

One school year in an all-day program is required. Adaptation is provided for 1/2-day programs which may not complete all units. The curriculum has also been used in migrant programs which do not meet for a complete school year.

IMPLEMENTATION PROCEDURES

1. No more than 25 children should be enrolled in each class.
2. Children should be from economically disadvantaged backgrounds.
3. The dominant language of a majority of each class should be Spanish. (The activities may be taught in either English or Spanish, but their sequencing and difficulty may not be appropriate for native English speakers.)
4. Each class must have one teacher and one assistant teacher, both of whom should be bilingual.
5. It is strongly recommended that 1 full-time supervisor be assigned for each 10 classrooms.
6. The local supervisors should participate in a 7- to 10-day preservice workshop designed to train them to install the program and to conduct preservice and inservice teacher training.
7. A 5-day preservice workshop for teachers should be held at each site before instructional activities begin. Materials for the workshop are provided.
8. Staff development supervisors generally will spend approximately 1-1/2 to 3 hours each day observing in classrooms.
9. Two to three hours per week should be allotted for teacher inservice training. In addition, teachers and assistant teachers should have at least 45 minutes per day for planning and preparation. This time must be scheduled so the teaching team can plan together.

Personnel Required for Product Adoption and Implementation

The instructional activities require a bilingual teacher and a bilingual assistant teacher for each classroom, and a supervisor for each 10 classrooms.

ASSURANCES AND CLAIMS

The BECP, Level III,was tested over a 5-year period in rural and urban classrooms in which children from Spanish-speaking homes were enrolled. These classrooms included a high concentration of children from low-income families. Children of migrant agricultural workers have also participated in the program. Extensive feedback was collected from teachers, supervisors, and others working with the program; there have been no reports of harm or damage to children caused by participation in the curriculum.

The instructional materials were designed to be relevant to the cultural, social, and linguistic experiences of Spanish-speaking children, particularly Mexican-American children of the Southwest. The program has also been implemented in several northern and midwestern cities where there are a large number of Puerto Rican children. Data have not been collected on the use of the program for middle-income children or native English speakers. The materials make use of the generic "he" to refer to the child and "she" to refer to the teacher.

BILINGUAL EARLY CHILDHOOD COMPONENT, LEVEL III STAFF DEVELOPMENT

A comprehensive model for teacher training, both preservice and inservice

The *Bilingual Early Childhood Component, Level III, Staff Development*, is a comprehensive model for teacher training, both preservice and inservice. It contains five teacher's manuals, accompanying filmstrips, a supervisor's manual, and an administrator's handbook. Three of the teacher's manuals form the basis for a preservice workshop conducted by the supervisor. This workshop is a comprehensive introduction for new teachers. It includes filmstrips which demonstrate model lessons and classroom arrangements. The workshop is performance based, emphasizing demonstration, role playing, and practicing of teaching skills. The supervisor's manual contains detailed instructions for conducting the workshop, including grouping and pairing of teachers, leading discussions, providing feedback, and adapting the workshop to meet the needs of more experienced teachers. The supervisor's manual also contains guidelines for implementing a bilingual preschool program, including instructions for hiring and supervising teachers, providing resources for teachers, observing in the classroom, and performing other administrative and supervisory functions.

Continuing inservice teacher training is provided through the use of the remaining two teacher's manuals. These manuals cover such topics as teacher expectations, incidental learning and modeling, adapting the program to meet children's individual needs, and effective use of equipment in a bilingual preschool program. Detailed instructions for conducting inservice training are included in the supervisor's manual.

SUBJECT AREA(S)

Staff development materials include several hours of demonstration filmstrips on classroom and lesson preparation, lesson presentation, and testing, plus the following manuals and booklets:

1. Administrator's handbook: Overview of the program and information for superintendents, principals, and other school administrators.
2. Supervisor's manual: How to conduct the performance-based preservice teacher training workshop.
3. Preservice manaul—volume 1: How the curriculum elements fit together, rationale and goals underlying the entire program and each of the individual elements; general program information, teacher roles and responsibility, classroom organization and management; and lists of basic early childhood equipment.
4. Preservice manual—volume 2: Detailed information about small-group instruction; sample visual, auditory, motor, ideas and concepts, and syntax of English lessons; how to prepare and administer unit and mastery tests; how to use test information to plan remedial teaching; how to organize the classroom and plan activities so that control and discipline problems are minimized.
5. Preservice manual—volume 3: How to set up and equip various learning centers in the preschool classroom.
6. Inservice manual—volume 1: Practical suggestions for setting up effective learning situations and for responding to children in various situations, how teacher attitudes and expectations can influence success and failure in the classroom, how to teach through example and modeling in addition to more formal instruction, and what to do when a child does not meet the objective of a lesson.
7. Inservice manual—volume 2: How to demonstrate the uses of manipulative equipment to the children and how to help the children learn to use the equipment independently.

INTENDED USERS AND BENEFICIARIES

Administrators, supervisors, teachers, and assistant teachers of Spanish-speaking 5-year-olds are the intended users and beneficiaries.

GOAL(S) OR PURPOSE(S)

Preservice training goals are: (1) To train the teacher in setting up a preschool classroom for maximum program effectiveness; (2) to instruct the teacher in methods of demonstrating and teaching with classroom materials and equipment; (3) to develop teacher skills in classroom assessment of children's learning; (4) to demonstrate and simulate ways of instructing young children; and (5) to assist the teacher in planning, scheduling, and managing classroom activities.

Inservice training goals are: (1) To instruct the teacher in ways of identifying and assisting children who demonstrate problems in learning, (2) to develop the teacher awareness of the ways children learn from modeled behavior, (3) to develop teacher awareness of the effect of negative and positive expectations on the behavior of children, and (4) to further develop the teacher's ability to maximize the learning which can occur through the use of classroom materials.

PATTERNS OF USE

The preservice training manuals are designed to be used with the accompanying filmstrips in a preservice workshop conducted by the supervisor. The preservice training model provided in the supervisor's manual details essential activities, although the actual structure of the workshop is left to the supervisor.

The inservice manuals are designed to be used as part of a continuing program of teacher training, the specific application of which is a supervisory function.

ASSESSMENT PROVISIONS

There is no formal testing. Teacher evaluation is an ongoing part of the supervisor's activities with observational checklists provided.

The preservice training model workshop is heavily performance based in its methods and objectives.

One implication of the performance-based aspect of the workshop is accountability. Participants are expected not merely to read about and discuss their roles in the program, but also to show that they understand and can perform the behaviors associated with those roles. They practice teaching lessons, giving equipment demonstrations, making out schedules, planning related activities, making smooth transitions, and setting up their classrooms.

The supervisor's manual contains mastery questions for each of the teacher manuals to assess the teacher's understanding of the material presented. It also contains guidelines for using the mastery questions to enhance teacher learning.

TIME REQUIREMENTS

The preservice workshop requires a minimum of 5 days, 6 hours per day. The inservice training is an ongoing activity consisting of 2 to 3 hours of training per week throughout the school year. In addition, the teacher-assistant teacher team should have a minimum of 45 minutes each day to plan for the following day.

During the first part of the year, the supervisor visits the classrooms approximately 1-1/2 to 3 hours per week to observe.

IMPLEMENTATION PROCEDURES

The requirements for effective presentation and use of the staff development product are as follows:

1. During the first year of the program, it is strongly recommended that 1 full-time supervisor be assigned for each 10 classrooms to assist with regular and continuous staff development.
2. The local supervisor will participate in a 7- to 10-day preservice workshop for supervisors, designed specifically to train them to install the program and to conduct preservice and inservice teacher training.
3. A 5-day preservice workshop for teachers will be held at each site before instructional activities begin.
4. Staff development supervisors should spend approximately 1-1/2 to 3 hours each day observing in classrooms.
5. Teachers should be given 2 or 3 hours per week for inservice training, as well as daily planning time.

ASSURANCES AND CLAIMS

The staff development product has been used only in sites where the *Bilingual Early Childhood Program, Level III*, was conducted. No reports of harm or damage to teachers or children resulting from use of these activities were received.

All materials in the program, including the staff development materials, were designed to be relevant to the cultural, social, and linguistic experiences of Spanish speakers. It is recognized, however, that teachers may or may not share these experiences, and the teacher materials do not assume a particular background or heritage. The generic "she" is used to refer to the teacher and the supervisor, and "he" is used to refer to the child.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Teacher staff development manuals		39.15	Reusable

PARENT INVOLVEMENT III

A system of parent activities to be used at home to reinforce what the children learn in school

The *Parent Involvement III* is comprised of the following materials: A teacher's manual, *School and After: Parents Help;* a filmstrip with audio recording, *School and After: Parents Help;* and a parent manual, *Home Activities for Parents*, containing 60 individual learning activities written in Spanish and English.

Recent work with low-income parents indicates that they are as equally concerned about their children's education as are more advantaged parents. However, because of their limited education, resources, and power in the community, low-income parents often do not know how to maximize their children's educational experiences. The parent involvement product is designed to assist parents in these areas by involving parents as partners in the task of helping each child reach his potential. The parent involvement product provides information and resources that will help parents to accomplish this task successfully.

No early childhood education program can fully achieve its goals without support from parents. Therefore, the parent involvement product includes parent involvement materials designed for use at home to reinforce what the children have learned in school. Parents learn specific skills so that they feel secure in their own knowledge and can develop greater interest in their children's work. To develop vocabularies and concepts through communication, parents are encouraged to emphasize conversation with their children. The importance of language and communication with adults as the basis for intellectual development is stressed.

More than 100 individual parent activities include pictures, games, and stories which can be used easily in the home. Normal situations are emphasized—cooking dinner or walking to the bus stop can be turned into educational experiences. The product seeks to establish in the parents a positive expectation of the child's ability to achieve. This can greatly accelerate a child's success at school.

SUBJECT AREA(S)

Parent Involvement III has two major functions or elements. The first element is involving parents in the school setting, and it is carried out by the teacher, supervisor, or parent involvement agent to insure that the goals of the program are met. These activities include: (1) Making home visits to meet the children and the parents before school begins, (2) conducting an orientation meeting at school for parents, (3) organizing a Parent Advisory Committee (PAC), (4) involving parents in classroom observation, (5) involving parents as participants in classroom activities, and (6) involving parents in field trip activities.

The second function is the home activities element, designed to help parents become more effective teachers of their preschool children. The purpose of this element is to develop the parents' awareness of their teaching roles and to encourage their participation in the formal education of their children.

INTENDED USERS AND BENEFICIARIES

Five-year-old Spanish-speaking children and their parents are the intended users.

Although designed primarily for 5-year-old Spanish-speaking children and their parents, the program has also been used with English speakers. The developers rate its use with English speakers as "successful," but field test data supporting this claim have not been collected due to lack of funding.

GOAL(S) OR PURPOSE(S)

Parent Involvement III has three goals: (1) To initiate and maintain positive attitudes, interaction, and understanding between home and school regarding early childhood education and parent involvement; (2) to increase the parent's knowledge of community resources and facilities and how these can be used to help meet their needs; and (3) to inform the parents of their children's learning experiences in school.

PATTERNS OF USE

Unit packets are sequential and cumulative, providing a complete program. The activities may also be used independently.

ASSESSMENT PROVISIONS

There is no formal testing. The home activities that the parents do with the child reinforce what the child has learned at school.

TIME REQUIREMENTS

Completion of each home activity in the parent's manual requires approximately 10-15 minutes. Of course, parents are free to spend the amount of time they feel is necessary for each activity. The home activities continue throughout the school year.

The parent advisory committee meets once a month throughout the year.

IMPLEMENTATION PROCEDURES

Strategies for implementation of *Parent Involvement III* include: (1) Home visits made by the teacher or the parent involvement agent, (2) orientation meeting for parents conducted at the school, (3) organizing a parent advisory committee, (4) involvement of parents in classroom observation, (5) involvement of parents as participants in classroom activities, (6) involvement of parents in field trip activities, (7) conducting an orientation to the parent education element, and (8) giving demonstration sessions for home activities.

ASSURANCES AND CLAIMS

There have been no reports of harm or damage to children or families caused by the use of these materials. The materials have been used only in conjunction with the *Bilingual Early Childhood Program, Level III*, but examination of the activities suggests that they are applicable to a variety of settings. The materials are designed for use with Spanish-speaking families, and no data are available either to support or discourage their use with English-speaking families. The materials do not appear to promote any social, sexual, or racial biases, and no complaints of this nature have been received. The printed materials use the generic "he."

PASO A PASO CON LOS NINOS (PART OF THE EARLY CHILDHOOD PROGRAM)

A collection of songs and dances which can supplement any preschool program

Paso a Paso con los Niños is a collection of 46 traditional Mexican songs and dances. This collection has been specifically adapted for young children.

Paso a Paso con los Niños consists of a manual and a set of three records. The manual includes the words for the songs and games as well as directions and diagrams for performing the games and dances. It is also illustrated with color photographs of young children. A set of three records accompanies the manual. All of the 46 songs and dances are accompanied by authentic Mexican music.

This collection of songs and dances can be used as a supplement to any preschool program or as part of *Bilingual Early Childhood Program, Level I, Bilingual Early Childhood Program, Level II, Bilingual Early Childhood Program, Level III*, and *Bilingual Kindergarten System*.

SUBJECT AREA(S)

Paso a Paso con los Niños, a collection of traditional Mexican songs, games, and dances, includes:

Canciones y Juegos (Songs and Dances)
- A pares y nones
- Don Pirulí
- El Patio de mi casa
- En el agua clara
- La rueda de San Miguel
- La víbora de la mar
- Los patitos
- Los pollitos
- Las mananitas Mexicanas
- Matarili rili ron
- Naranja dulce
- San Serafín del monte
- A Madrú señores
- Al ánimo

Bailes (Dances)
- Cielito lindo
- Danza de los viejitos
- El jarabe taptío
- Jesusita en Chihuahua
- La bamba
- La raspa
- La varsoviana
- La zandunga

Canciones y juegos (songs and games)
- Caballito blanco
- ¿Cuánto me das marinero?
- El sapito
- Dõna Blanca
- El acitrón
- El conejo
- El patito
- Hilitos, hilito de oro
- Juan pirulero

INTENDED USERS AND BENEFICIARIES

Intended users are 3-, 4-, and 5-year-old Spanish-speaking children, their teachers, and parents.

GOAL(S) OR PURPOSE(S)

Paso a Paso con los Niños is intended to enhance the children's cultural awareness and identification.

PATTERNS OF USE

Supplementary manual and records provide songs and dances to be used as desired by parents, teachers, and children.

ASSESSMENT PROVISIONS

There is no formal testing. Success is measured by the amount of enjoyment and cultural awareness the children receive.

TIME REQUIREMENTS

The individual songs last from 3 to 7 minutes. On the three long-playing records, each side plays for 17 minutes.

IMPLEMENTATION PROCEDURES

Because the *Paso a Paso con los Niños* manual is complete with words, "how to" instructions, and diagrams, the implementation is carried out by the teacher, parent, or supervising adult without special training or equipment.

ASSURANCES

The materials reflect culture fairness and no negative cultural bias. The product has been used in approximately 25 States, in Latin America, and Colombia, South America.

Paso a Paso con los Niños

INFORMATION CURRENT AS OF MARCH 1975 ■

BILINGUAL KINDERGARTEN SYSTEM

A comprehensive multimedia program to make Spanish-speaking preschool children functionally bilingual

The *Bilingual Kindergarten System* is a comprehensive multimedia program for the Spanish-speaking preschool child. Materials are designed not merely to teach the child English, but to help the child become functionally bilingual—to teach the child English while strengthening the Spanish-language skills already acquired. The program is a total learning system which includes the following products: Isntructional materials (8 instructional manuals—4 in English and 4 in Spanish; all related media); staff development (7 manuals and 11 filmstrips with audiorecordings); and parent involvement (1 teacher's manual, filmstrip with audiorecording, and 60 individual learning activities).

The general goals of the program are: (1) To develop the child's basic motor, visual, and auditory abilities; (2) to develop the child's total language skills in both English and Spanish; (3) to develop the child's general knowledge and thinking and reasoning abilities; and (4) to help the child in developing a positive self-concept.

To achieve these goals, the program provides more than 600 activities covering 7 basic areas: (1) visual training, (2) auditory training, (3) motor training, (4) prewriting, (5) ideas and concepts, (6) syntax of English, and (7) building vocabulary. An additional manual of mathematics activities supplements the basic program. These activities are organized into 12 units or themes. Activities in each unit complement and reinforce one another by being related to the unit topic or to a particular skill. All activities are written in both English and Spanish for small groups of 6-8 pupils with an optimum class size of 25-30. The program provides activities for either a total schoolday or for 1/2-day programs.

Because the product uses small-group instruction and because curriculum guides are written in both English and Spanish, children may be grouped by language fluency and learning ability so that each child can develop at an individual pace.

An optional product, *Home Activities for Parents*, in English and in Spanish, enables parents to participate fully in the education of their children.

In the *Bilingual Kindergarten System*, every activity has been tested for 4 years with thousands of children; and children who have used the product show superior performance on standard tests in perceptual, cognitive, and language-comprehension development. Teachers who have used the product give high ratings (ease of use, pupil interest) to materials and most report a desire to continue using the product.

SUBJECT AREA(S)

The seven basic training areas (visual, auditory, motor, prewriting, ideas and concepts, syntax of English, and building vocabulary) are covered in activities throughout the 12 units of the program.

The 12 units of *Bilingual Kindergarten System* are organized around a topic or theme. Each unit theme is both relevant to the child's background and significant to growth and development. Units are arranged sequentially by theme: The product begins with an orientation to school and progresses through units on the self and the family to units on the neighborhood and the extended environment. The unit topics are as follows: (1) School (la escuela), (2) body awareness (conciencia del "yo" fisico), (3) self-concept (concepto de si mismo), (4) clothing (la ropa), (5) food (la comida), (6) family and home (la familia y la casa), (7) community helpers (los ayudantes de la comunidad), (8) transportation (los transportes), (9) community environment (ambiente de la comunidad), (10) animals (los animales), (11) natural environment (la naturaleza), and (12) what I have learned (lo que he aprendido).

INTENDED USERS AND BENEFICIARIES

Although designed primarily for 5-year-old Spanish-speaking children, their teachers and parents, the product has also been used with English speakers. The developers rate its use with English speakers as "successful," but field-test data supporting this claim have not been collected due to lack of funding.

GOAL(S) OR PURPOSE(S)

Bilingual Kindergarten System is a total learning system encompassing the following goals: (1) To help children become functionally bilingual; (2) to strengthen their ability to communicate in Spanish; (3) to learn English syntax and vocabulary; (4) to enhance self-concept through successful experiences, self-evaluation, and self-acceptance; (5) to develop general knowledge of home, neighborhood, and extended environment; (6) to develop basic auditory, motor, and visual abilities; (7) to learn to identify and solve problems, and to think and reason; (8) to work independently; and (9) to use multimedia materials to involve them in an enjoyable learning experience.

PATTERNS OF USE

Units and materials are sequential and cumulative, providing a complete program. A supplementary manual and records are provided for songs and dances (Paso a Paso). A supplementary manual is provided for teaching mathematical concepts.

ASSESSMENT PROVISIONS

The system is a product of Southwestern Educational Development Laboratory's (SEDL) systematic process of educational development. The process begins with context analysis (a study of needs) and moves through design testing, pilot testing, and field testing to diffusion to the children of the Nation. Revision, based on feedback gathered from teachers, plays a major part throughout the process. This product was systematically refined after design test and pilot test, and again after the more advanced field test.

SEDL's process of eeucational development insures that a product, such as *Bilingual Kindergarten*, reaches the marketing stage only after extensive testing and proven effectiveness.

The program was first implemented in 1969-70 at the Good Samaritan Center and at the Edgewood Independent School District in San Antonio, Texas, with urban Mexican-American children. During 1970-71, the materials were tested with migrant children as well as with urban Mexican-American populations. Since then more than 3,000 children have participated in pilot-test and field-test activities, including both rural and urban pupils in monocultural and multicultural settings. Through the cooperative efforts of teachers, administrators, and school superintendents, the program materials have been revised by SEDL staff to meet the needs of children of the target population.

On the auditory test of language comprehension, children made significant gains between the pretests and posttests on both the English and Spanish versions.

On the Raven progressive matrices, a nonverbal measure of general intellectual development, children using the program made significantly greater gains than those in comparison groups, indicating superior perceptual and cognitive development.

On criterion-referenced tests, 75 percent or more of the children successfully mastered the objectives of the visual, auditory, prewriting, and ideas and concepts elements.

A pretest, 3 mastery tests, and 11 unit tests are included in a separate manual. Each test includes instructions for administering the test in either Spanish or English, a list of materials needed, scoring grids, and a list of lessons to be reviewed or retaught following test administration.

Teachers responding to a user questionnaire rated ease of use of materials and pupil interest highly, and 87 percent reported desire to use the product again.

Teacher evaluation is an ongoing part of the supervisor's activities with observational checklists provided.

Instructional materials include a pretest before beginning the program, criterion-referenced tests to follow each unit, and posttests. Mastery tests are included at the end of each three units.

TIME REQUIREMENTS

The *Bilingual Kindergarten System* provides activities for a full school year, and these activities can be geared either for a total schoolday or for 1/2-day programs. The pupil instructional materials are divided into 12 units of approximately 53 activities per unit. Each unit is designed to be used for a 2- to 3-week period. Each activity within a unit is designed to be taught for approximately 15-20 minutes.

IMPLEMENTATION PROCEDURES

The requirements for the effective use of the *Bilingual Kindergarten System* are as follows:

1. No more than 35 children may be enrolled in each class.
2. Children should be from economically disadvantaged backgrounds.
3. The dominant language of a majority of each class should be Spanish. Activities assume that the children are native Spanish speakers. They extend the Spanish of these children and at the same time teach them English as a second language; they do not, however, teach Spanish to English speakers, and their sequencing and difficulty level may not be appropriate for native English speakers.
4. Each class must have one teacher and one assistant teacher, both of whom should be bilingual.
5. During the first year of product use, it is strongly recommended that 1 full-time supervisor be assigned for each 10 classrooms to assist with regular and continual staff development. At sites operating with fewer than 10 classrooms, 1 person will usually be designated as the supervisor. Larger sites will need additional supervisors who will work under the direction of the head supervisor (such as site coordinator or program head).
6. The local supervisor will participate in a 7- to 10-day preservice workshop for supervisors, designed specifically to train them to install the program and to conduct preservice and inservice teacher training. This workshop is held in the summer, usually in July, before the workshops at local sites have begun.
7. A 5-day preservice workshop for teachers will be held at each site before instructional activities begin.
8. Staff development supervisors generally will spend approximately 1-1/2 to 3 hours each day observing in classrooms.
9. Teachers should be given 2 or 3 hours per week for inservice training. In addition, teachers and assistant

teachers should have a minimum of 45 minutes per day to plan their activities for the following day. This planning must be scheduled so that each teaching team can plan together.

If the product is to work, it is critical that staff members be thoroughly familiar with the goals and objectives of the product model. The laboratory strongly recommends that an orientation concerning the *Bilingual Kindergarten System* be held for staff members teaching in the local school. Working with young children will be a new experience in many schools, and all personnel need to know the special needs of young children. Experience has shown that total staff involvement contributes greatly to a successful program and minimizes misunderstandings and difficulties.

In addition to the training provided in the staff development component of the product, training is provided to sites through other divisions of the laboratory. Field relations and dissemination has a commitment to provide preservice and inservice training to the national demonstration sites. The migrant division provides training to 14 Texas school districts with a total of 1,440 5-year-olds participating in the system. Each school district contracts separately for the amount of training it desires.

The followthrough division provides training to followthrough sites in 4 school districts involving 818 5-year-olds; to California migrant sites in 6 congressional districts involving approximately 1,000 5-year-olds; and to 2 title VII programs involving 120 5-year-olds. In each case, the training is contracted by the site.

The National Educational Laboratories Publishers, Inc. (NELP), provides preservice training to all districts that purchase the program directly from the publisher. The training workshop usually lasts 4 days and is given during the summer. NELP offers this once-a-year training free of charge, with the individual districts paying travel expenses for their participants.

Personnel Required for Product Adoption and Implementation

The *Bilingual Kindergarten System* requires both a bilingual teacher and a bilingual assistant teacher for each classroom and a supervisor for each 10 classrooms.

ASSURANCES AND CLAIMS

Assurances of Harmlessness

The *Bilingual Kindergarten System* has been used by more than 3,000 pupils during pilot-test and field-test activities. Formative and summative data obtained from selected sites using the program during the multiyear developmental process were used for program revision and refinement. These data provided no indication of sociological, psychological, or physical harm to pupils exposed to the materials.

Assurances of Social Fairness

The materials have been approved for statewide textbook adoption beginning September 1975 by the State Board of Education of Texas. During the approval process, the materials were made available for critical review by both professional and special interest groups. Testimony, solicited by the State textbook committee in open hearings, indicated that the product contained no materials considered to be biased toward any ethnic, sex, or cultural group.

Assurances of Replicability

The *Bilingual Kindergarten System* was field tested with both migrant and nonmigrant 5-year-olds during 1972-73. Approximately 2,000 native Spanish speakers in a 3-State area, representing urban and rural locales, were involved in this field test. Detailed staff development materials developed for the curriculum in conjunction with preservice training provided adequate information for classroom implementation of the materials.

Claims of Careful Product Development

The *Bilingual Kindergarten System* is a product of the curriculum development process used by the Southwest Educational Development Laboratory (SEDL) for systematic design, testing, and refinement of curriculum systems. The aim of the development process is the creation of worthwhile educational innovations of proven effectiveness. Before publication in late 1973, it was implemented for 4 years with more than 3,000 pupils in a 3-State area.

Claims of Effectiveness

Field-test data from migrant and nonmigrant sites indicated that pupil mastery of the curriculum was high. With the exception of one curriculum element at one migrant site, a criterion level of 75 percent mastery was reached on all curriculum elements at all migrant and nonmigrant sites.

Although standardized test batteries varied between sites because of site goals, results were favorable to project pupils. At both migrant and nonmigrant sites, project pupils scored significantly higher than comparison pupils on the TOBE general concepts test. Nonmigrant project pupils also scored significantly higher than comparison pupils on the metropolitan readiness test. Migrant pupils did not receive this test. Nonmigrant pupils also scored significantly higher than comparison pupils on the SCAMIN, a measure of self-concept and academic motivation. Although migrant pupils did not receive the SCAMIN, pupil responses to the pupil attitude inventory at these sites indicated positive affective reaction toward classroom experiences.

In general, responses from teachers at all sites were favorable to the program. Data from a user questionnaire indicated that teachers found the *Bilingual Kindergarten System* to be appropriate and helpful to the target population. A large majority of teachers at each site expressed a willingness to teach the program again.

Claims of Replicability or Transportability

Since completion of field testing in 1973, 151 complete packages have been purchased for classroom use in 12 States. In addition to these complete packages of materials, another 132 partial packages have been purchased for classroom use or review prior to purchase. As a result of adoption by the Texas State Textbook Committee, significant increases in the dissemination of the product are expected in Texas during 1975-76.

INFORMATION CURRENT AS OF MARCH 1975 ■

BILINGUAL KINDERGARTEN - INSTRUCTIONAL MATERIALS

A multimedia curriculum to teach 5-year-old Spanish-speaking children English while strengthening their present Spanish-language skills

The *Bilingual Kindergarten Instructional Materials* comprises a multimedia curriculum for the Spanish-speaking 5-year-old child. Materials are designed not merely to teach the child English, but to help the child become functionally bilingual—to teach the child English while strengthening the Spanish-language skills already acquired.

Pupil instructional materials are divided into 12 units of approximately 53 activities each, designed to be used for a 2- to 3-week period. Spanish and English curriculum guides accompany each unit. Multiple types of media are included for instructional activities (photographs, color drawings, filmstrips, audiorecordings, transparencies, games, posters, spirit duplicating masters, workcards, numeral cards, letter cards, color cards, and sets of geometric shapes in various colors and sizes).

Each unit includes overview of the unit; lesson activities; and special instructional multimedia materials (such as filmstrips, audiorecordings, puzzles, photographs, black-and-white and color drawings, and games).

Each activity, designed for approximately 15-20 minutes, includes: (1) An overview of the activity (such as behavioral objective, statement of purpose, list of materials required, material preparation, special instructions); and (2) a procedure with an easy-to-follow format of introduction, demonstration, interaction, conclusion, and expansion.

SUBJECT AREA(S)

The instructional materials specifically deal with the child's development in seven basic areas: (1) Visual training, (2) auditory training, (3) motor training, (4) prewriting, (5) ideas and concepts, (6) syntax of English, and (7) building vocabulary.

These 7 areas are covered in more than 600 activities in the curriculum. The activities are divided into 12 units of 50 to 55 activities each.

INTENDED USERS AND BENEFICIARIES

Five-year-old Spanish-speaking children, their teachers, assistant teachers, and parents are the intended users.

Although designed primarily for 5-year-old Spanish-speaking children, their teachers, and parents, the product has also been used with English speakers. The developers rate its use with English speakers as "successful."

GOAL(S) OR PURPOSE(S)

The instructional product is not merely a language curriculum. It is a total learning system with four general goals: (1) To develop basic visual, auditory, and motor skills; (2) to develop language skills in both English and Spanish; (3) to develop general knowledge and thinking and reasoning skills; and (4) to develop a positive self-concept in the child.

PATTERNS OF USE

Units and materials are sequential and cumulative, providing a complete program. A supplementary manual and records are provided for songs and dances (Paso a Paso). A supplementary manual is provided for teaching mathematical concepts.

ASSESSMENT PROVISIONS

The product procedures include a pretest, criterion-referenced tests to follow each unit session, and posttests. Unit tests assess the child's ability to meet the objectives of unit activities. Mastery tests, which assess the child's mastery of concepts and skills over a three-unit interval, are included at the end of each of the three units.

TIME REQUIREMENTS

The *Bilingual Kindergarten Instructional Materials* provides activities for a full school year, and these activities can be geared either to a total schoolday or to half-day programs. The pupil instructional materials are divided into 12 units of approximately 53 activities per unit. Each unit is designed to be used for a 2- to 3-week period. Each activity within a unit is designed to be taught for approximately 15-20 minutes.

IMPLEMENTATION PROCEDURES

The requirements for the effective use of the *Bilingual Kindergarten Instructional Materials* are as follows:

1. No more than 30 children may be enrolled in each class.

2. Children should be from low-income backgrounds.

3. The dominant language of a majority of each class should be Spanish. Activities assume that the children are native Spanish speakers. They extend the Spanish of these children and at the same time teach them English as a

second language; they do not, however, teach Spanish to English speakers, and their sequencing and difficulty level may not be appropriate for native English speakers.

4. Each class must have one teacher and one assistant teacher, both of whom should be bilingual.

Personnel Required for Product Adoption and Implementation

The curriculum requires both a bilingual teacher and a bilingual assistant teacher for each classroom and a supervisor for each 10 classrooms.

ASSURANCES AND CLAIMS

Assurances of Harmlessness

The *Bilingual Kindergarten Instructional Materials* has been used by more than 3,000 pupils during pilot test and field test activities. Formative and summative data obtained from selected sites during this multiyear development process were used for program revision and refinement. These data provided no indication of sociological, psychological, or physical harm to pupils exposed to the materials.

RD 110 023

BILINGUAL KINDERGARTEN PARENT INVOLVEMENT

A program to aid parents in complementing the school experience

The *Bilingual Kindergarten Parent Involvement* is comprised of the following materials: A teacher's manual, a filmstrip with audiorecording, and a parents' manual containing 60 individual learning activities written in Spanish and English.

Recent work with low-income parents indicates that they are no less concerned about their children's education than are more advantaged parents. However, because of their limited education, resources, and power in the community, low-income parents often do not know how to maximize their children's educational experiences. This product is designed to assist parents in these areas by involving them as partners in the task of helping to assure that each child's potential is reached. The product provides information and resources that will help parents accomplish this task successfully.

No early childhood education program can fully achieve its goals without support from parents. Therefore, the product includes parent-involvement materials designed for use at home to reinforce what the children have learned in school. Parents learn specific skills so that they feel secure in their own knowledge and develop a greater interest in their children's work. To develop vocabularies and concepts through communication, parents are encouraged to emphasize conversation with their children. The importance of language and communication with adults as the basis for intellectual development is stressed.

More than 100 individual parent activities include pictures, games, and stories that can be used easily in the home. Normal situations are emphasized so that cooking dinner or walking to the bus stop turn into educational experiences. The product seeks to establish within the parents a positive expectation of the child's ability to achieve. This can greatly accelerate a child's success at school.

SUBJECT AREA(S)

The *Bilingual Kindergarten Parent Involvement* has two major functions or elements. The first element is involving parents in the school setting carried out by the teacher, supervisor, or parent-involvement agent to insure that the goals of the program are met. These activities include: (1) Making home visits to meet the children and the parents before school begins, (2) conducting an orientation meeting at school for parents, (3) organizing a parent advisory committee (PAC),(4) involving parents in classroom observation, (5) involving parents as participants in classroom activities, and (6) involving parents in field trip activities.

The second function is the home activities element, designed to help parents become more effective teachers of their preschool children. The purpose of this element is to develop the parents' awareness of their teaching roles and to encourage their participation in the formal education of their children.

Thus, parent education provides opportunities for parents to initiate and share learning experiences with their children. Orientation sessions and *Home Activities for Parents*, which complement the classroom instruction, have been developed for use by parents in improving their teaching skills with their child.

The parent education materials, *Home Activities for Parents*, have been designed to help parents become aware of everyday occurrences that can be converted into learning experiences. There are three types of home activites in the program: Those for which pictures are provided in the individual unit packets, those which request materials found in the home, and those which suggest topics of conversation.

Each home activity manual contains 20 units bound in looseleaf form. Each unit packet includes five activities written in both Spanish and English. Parents should begin presenting home activities to their children only after a particular concept has been taught in the classroom. Since the activities cover what has already been taught, the parents are not required to teach new material, but will review and reinforce what the child has already learned.

Other product materials include the teacher's manual, *School and After: Parents Help*, accompanied by a filmstrip and audiorecording. The manual details how to work with parents and how to enlist the aid of parents in helping each child reach full potential.

INTENDED USERS AND BENEFICIARIES

Five-year-old Spanish-speaking children and their parents are the intended users.

Although designed primarily for 5-year-old Spanish-speaking children and their parents, the program has also been used with English speakers. The developers rate its use with English speakers as "successful," but field test data supporting this claim have not been collected due to lack of funding.

GOAL(S) OR PURPOSE(S)

The parent involvement product has three goals: (1) To initiate and maintain positive attitudes, interaction, and understanding between home and school regarding early childhood education and parent involvement; (2) to increase the parents' knowledge of community resources and facilities and how these can be used to help meet their needs; and (3) to inform the parents of their children's learning experiences in school.

The first goal concerns attitude. Parents' interaction with the school is vital to their child's development and achievement. Parents must not feel that the school is interested in the family only when the child has done something wrong. If the parents avoid involvement with the school because of anxiety, hostility, or indifference, a remedy must be found. Through home visits and orientation sessions, parents and members of the school staff become better acquainted, thus initiating a cooperative working atmosphere between home and school.

The second goal of the product is to help parents meet their own basic needs. Children's development is often held back because of inadequate food, clothing, or housing. A child who comes to school hungry will have little energy for learning; a child who misses school because parents cannot afford clothes will fall behind in studies; a child who is continually uprooted because of housing problems will have difficulty developing and maintaining sound learning patterns and a close identification with a particular teacher or school.

Parents should know where to turn when problems such as these arise and outside help is needed. Social services which provide assistance for such family problems are available in most communities. If a parent is unfamiliar with these services, however, problems may persist indefinitely. Activities for achieving this goal of the program include a suggested social service survey and a parent advisory committee.

The third goal of the product is to acquaint parents with their child's experience at school. When parents show genuine interest in school and learning, children are almost certain to follow their example. It is important to let parents know what their children are doing; the parents' interest makes schoolwork more important and meaningful to the child. If parents visit the school, the child feels that home and school are part of the same experience. Most important, contacts between parents and teachers break down the barriers that sometimes separate the home and the school. Parents are, in every sense, teachers; and their task, though different from that of a classroom teacher, is vital. A good relationship between the two kinds of teachers is most helpful to the child. Activities related to this goal include classroom observations, classroom participation, and field trips.

PATTERNS OF USE

Unit packets are sequential and cumulative, providing a complete program. The activities may also be used independently.

ASSESSMENT PROVISIONS

There is no formal testing. The home activities that the parent does with the child reinforce what the child has learned at school.

TIME REQUIREMENTS

Each home activity in the parent manual requires approximately 10-15 minutes to complete. Of course, parents are free to spend the amount of time they feel is necessary for each activity. The home activities continue throughout the school year. Likewise, the parent advisory committee meets once a month throughout the year.

IMPLEMENTATION PROCEDURES

Strategies for implementation of the parent involvement product include:

1. Home visits made by the teacher or the parent involvement agent.
2. Orientation meetings for parents conducted at the school.
3. Organizing parent advisory committee.
4. Involvement of parents in classroom observation.
5. Involvement of parents as participants in classroom activities.
6. Involvement of parents in field trip activities.
7. Conducting an orientation to the parent education element.
8. Giving demonstration sessions for home activities.

ASSURANCES AND CLAIMS

There have been no reports of harm or damage to children or families caused by the use of these materials. The materials have been used only in conjunction with the *Bilingual Early Childhood Program, Level III*, but examination of the activities suggests that they are applicable to a variety of settings. The materials are designed for use with Spanish-speaking families, and no data are available either to support or discourage their use with English-speaking families. The materials do not appear to promote any social, sexual, or racial biases, and no complaints of this nature have been received. The printed materials use the generic "he."

BILINGUAL KINDERGARTEN STAFF DEVELOPMENT

An extensive multimedia product designed for preservice and inservice training

Bilingual Kindergarten Staff Development, an extensive multimedia staff development product of the bilingual kindergarten system, designed for preservice and inservice training, is divided into two parts—the site training package and the teacher materials.

The site training package materials are designed to be used by the district supervisor, or by an experienced teacher, to train groups of teachers new to the product. Twelve filmstrips, with accompanying cassette recordings and script booklets, demonstrate classroom procedures and deal with such topics as classroom organization, lesson preparation, testing children, and parent involvement. Teacher materials are illustrated manuals (one set per teacher) which have been developed to assist the teacher both before instruction begins and during the course of the school year. The sections of the three-volume preservice manual are for use with the site training package materials. The two-volume inservice manual helps the teacher use program materials to the greatest advantage. Also included is a manual dealing with parent involvement.

The supervisor's manual (only in the site materials) includes specific instructions for using the product to train teachers in a 5-day preservice workshop. The training model is performance based, featuring frequent simulation and role play of basic teaching skills by the teachers.

The preservice workshop specifically addresses the concerns and training needs of teachers new to the program. Staff development materials dealing with matters of less immediate concern are withheld until the teachers master the basic program model. At this point, their interests and concerns will have shifted toward the less basic content treated in materials designed for later inservice training. The training materials are in transportable, self-contained packages. They are presented in a way that should be easily understood by the teachers so they can use the materials on their own. Every supervising teacher and assistant teacher should have a set of staff development materials. The staff development materials attempt to answer everyday questions asked by teachers. For example, the teacher's manual: (1) Explains the rationale of the bilingual kindergarten system; (2) describes teacher preparation before class (e.g., setting up the classroom, obtaining essential equipment); (3) discusses how to save time, minimize confusion, develop a constructive classroom atmosphere, and help children learn to work independently; (4) shows how to prepare schedules; and (5) presents ideas for designing related activities and enrichment experiences.

Other staff development materials cover such topics as: (1) Obtaining, preparing, and demonstrating the use of learning materials; (2) diagnosing learning difficulties and developing methods to overcome them; (3) administering tests; (4) teaching through modeling; (5) communicating appropriate attitudes and expectations; and (6) equipping and decorating the classroom.

SUBJECT AREA(S)

Staff development materials include several hours of demonstration filmstrips on classroom and lesson preparation, lesson presentation, and testing, plus the following manuals and booklets:

1. Administrator's handbook: Overview of the program and other information for superintendents, principals, and other school administrators.
2. Supervisor's manual: Information for program supervisors about installing the product for the first time.
3. Preservice manual—Volume 1: Details about the product and about how the curriculum elements fit together, general program information, teacher roles and responsibilities.
4. Preservice manual—Volume 2: Detailed information about small-group instruction in sample lessons with critiques and suggestions for improvement, how to prepare and administer unit and mastery tests, how to use test information to plan remedial teaching, how to organize the classroom and plan activities so that control and discipline problems are minimized.
5. Preservice manual—Volume 3: How to set up and equip the various learning centers in the kindergarten classroom.

6. Inservice manual—Volume 1: Practical suggestions for setting up effective learning situations and for responding to children in various situations; how teacher attitudes and expectations can influence success and failure in the classroom; how to teach through example and modeling, in addition to more formal instruction; what to do when a child does not meet the objective of a lesson.

7. Inservice manual—Volume 2: How to demonstrate the uses of manipulative equipment to the children, how to help the children learn to use the equipment independently.

INTENDED USERS AND BENEFICIARIES

Administrators, supervisors, teachers, and assistant teachers of Spanish-speaking 5-year-olds are the intended users.

GOAL(S) OR PURPOSE(S)

Preservice training goals are: (1) To train the teacher in setting up a preschool classroom for maximum program effectiveness; (2) to instruct the teacher in methods of demonstrating and teaching with classroom materials and equipment; (3) to develop teacher skills in classroom assessment of children's learning; (4) to demonstrate and simulate ways of instructing young children; and (5) to assist the teacher in planning, scheduling, and managing classroom activities.

Inservice training goals are: (1) To instruct the teacher in ways of identifying and assisting children who demonstrate problems in learning, (2) to develop the teacher awareness of the ways children learn from modeled behavior, (3) to develop teacher awareness of the effect of negative and positive expectations on the behavior of children, and (4) to further develop the teacher's ability to maximize the learning which can occur through the use of classroom materials.

PATTERNS OF USE

Staff development is presented to the school personnel in two forms, as preservice training and as inservice training.

The preservice training model has been developed for use in a 1-week (5-day) workshop intended to help new teachers make a smooth start. The workshop is designed on the assumption that the teachers have little or no prior knowledge or experience in the program. Emphasis is placed on the instructional model, rationale, and practice in teaching and classroom organization techniques.

The 5-day workshop is an absolute minimum training requirement. It is used as a model only because 5 days is the maximum time available for preservice training in many school districts.

The model workshop for new teachers has been planned with several criteria in mind. First, the workshop stresses the knowledge and skills required for preparing the classroom and getting the school year off to a good start. Knowledge and skills which will be important later have been left for treatment during future inservice training.

The differing concerns of teachers with different levels of experience with the product have also been taken into account. Teachers just beginning to use the product are primarily concerned about what they have to do and how they should do it. Once they have mastered the basic instructional model and the necessary teaching techniques, they become more concerned about the rationales underlying the techniques and about how to adapt the basic model to meet the needs of individual children. Therefore, the preservice workshop concentrates primarily on presenting the basic model and on providing practice with the basic techniques, leaving analysis and discussion of rationales and adaptation problems for later inservice meetings and workshops.

The preservice workshop is ordinarily conducted by the supervisor, although others may also be involved. The term "trainer" is used to refer to the supervisor or anyone else who has responsibility for planning and leading one or more workshop sessions.

Two or three hours per week for inservice training is strongly recommended, especially for new teachers. In addition, teachers and assistant teachers should have a minimum of 45 minutes per day together to plan their activities for the following day.

It is also recommended that staff development supervisors spend approximately 1-1/2 to 3 hours each day observing in classrooms at the beginning of the year.

ASSESSMENT PROVISIONS

There is no formal testing. Teacher evaluation is an ongoing part of the supervisor's activities with observational checklists provided.

The preservice training model workshop is heavily performance based in its methods and objectives. Participants are expected not merely to read about and discuss their roles in the program, but also to show that they understand and can perform the behaviors associated with those roles. They practice teaching lessons, giving equipment demonstrations, making out schedules, planning related activities, making smooth transitions, and setting up their classrooms.

TIME REQUIREMENTS

The preservice workshop requires a minimum of 5 days, 6 hours per day. Inservice training is an ongoing activity consisting of 2 to 3 hours of training per week throughout the school year. In addition, the teacher-assistant teacher team should have a minimum of 45 minutes each day to plan for the following day.

The supervisor will visit the classrooms approximately 1-1/2 to 3 hours per week to observe.

IMPLEMENTATION PROCEDURES

The requirements for effective presentation and use of the staff development product are as follows:

1. During the first year of the program, it is strongly recommended that 1 full-time supervisor be assigned for

each 10 classrooms to assist with regular and continuous staff development.

2. The local supervisor will participate in a 7- to 10-day preservice workshop for supervisors, designed specifically to train them to install the program and to conduct preservice and inservice teacher training.

3. A 5-day preservice workshop for teachers will be held at each site before instructional activities begin.

4. Staff development supervisors should spend approximately 1-1/2 to 3 hours each day observing in classrooms.

5. Teachers should be given 2 or 3 hours per week for inservice training. In addition, teachers and assistant teachers should have a minimum of 45 minutes per day to plan their activities for the following day. This planning must be scheduled so that each teaching team can plan together.

The laboratory strongly recommends that an orientation be held for all staff members teaching in the local school. Experience has shown that total staff involvement contributes greatly to a successful program and minimizes misunderstandings and difficulties.

The National Educational Laboratories Publishers, Inc., (NELP) provides preservice training to all districts that purchase the program directly from the publisher. The training workshop usually lasts 4 days and is given during the summer. NELP offers this once-a-year training free of charge with the individual districts paying only travel expenses for their participants.

ASSURANCES AND CLAIMS

Assurances of Harmlessness

The product has been used in more than 150 sites where bilingual kindergarten training has been conducted. No reports of harm or damage to teachers or children resulting from the use of staff development activities were reported.

Assurances of Transportability

Materials have been approved for statewide textbook adoption beginning September 1975 by the State Board of Education of Texas. During the approval process, the materials were made available for critical review by both professional and special interest groups. Testimony, solicited by the State textbook committee in open hearings, indicated that the products contained no materials considered to be biased toward any ethnic, sex, or cultural group.

Claims of Social Fairness

All materials in the bilingual kindergarten system, including the staff development materials, were designed to be relevant to the cultural, social, and linguistic experiences of Spanish speakers. It is recognized, however, that teachers may or may not share these experiences, and the teacher materials do not assume a particular background or heritage. The generic "she" is used to refer to the teacher and the supervisor, and "he" is used to refer to the child.

RD 110 025

VIVIENDO Y APRENDIENDO EN *EL HOGAR*

A multimedia training package for Spanish-speaking, low-income parents of preschool children

Viviendo y Aprendiendo en el Hogar is a multimedia training package for Spanish-speaking, low-income parents of preschool children. Designed for a leader, an observer, and 15 parents, the package requires 5 sessions of approximately 1-1/2 hours.

The package includes: (1) A leader's manual; (2) detailed session procedures; and (3) a variety of media products—video tapes, filmstrips, films, transparencies, and take-home pamphlets. All aural materials are in Spanish. Printed materials are in Spanish and English. Each session procedure is designed with an introduction, a straightforward presentation of concepts, group participation activities, and a summary.

The leader's manual includes specific instructions on techniques of group leadership, directions for increasing participation through a variety of techniques such as role playing, simulation, and group discussion, as well as an overview of the training sessions.

The sessions show parents how they can teach their children throughout the day by talking about home activities and household objects and how they can encourage their children to search for answers and solutions independently. The sessions show parents how to use home activities and household objects to enrich their children's learning without purchasing commercial materials.

Each session procedure includes detailed information on how to present the particular concepts included. Following a statement of the purpose and focus of the session, the format is as follows: Introduction, review (if appropriate), overview of media presentation, presentation, discussion, group participation activities, summary, and evaluation. Sample dialog is included when appropriate.

Media include two video tapes or films, filmstrips and audiotapes, a set of transparencies, game cards, pictures, and pamphlets for participants.

Although materials and program ideas for use in parenting programs are available, they are generally scattered, unvalidated, and unreplicated. Further, evidence suggests that supportive behavior by a valued person, such as a mother, is highly correlated with cognitive development; but no systematic attempt is being made to build upon this evidence, and little attempt is being made to use modern technology for wide application of successful strategies. These lacks and needs in combination present one overriding problem: Adults involved in performing services for children need more knowledge and skill in child care.

Materials currently available for use with parents tend to be heavily oriented toward middle-class parents and heavily dependent upon the printed word. Few, if any, are organized in modular form so that they can be presented independently, are presented in multimedia format so that an adult learner can succeed with only minimal reading skills, or are presented in Spanish so that native Spanish speakers can use them with ease.

Viviendo y Aprendiendo en el Hogar is a multimedia approach developed in response to the assessed need for information on basic parenting skills, with minimal reliance upon printed materials and/or direct lecture. The topic was selected by two advisory groups as important for low-income parents of preschool children. One was comprised of professionals in the field of early childhood education, and the other was composed of low-income parents and teachers of various ethnic groups. A survey of parents was also utilized.

The instructional principles followed are to develop awareness, knowledge, or comprehension, and then to apply them. A variety of teaching strategies are described in the leader's manual and are also built into each session procedure. Strategies include large- and small-group discussions, simulation activities, role play, problem-solving situations, games, and evaluation, as well as direct presentation of information.

SUBJECT AREA(S)

The module includes the following subject areas: Parental attitudes, behaviors, and feelings, and their effects on children; using home activities to help children learn; materials to use with children at home; and how to structure a learning experience for a child at home.

INTENDED USERS AND BENEFICIARIES

The intended users of the module are Spanish-speaking low-income parents of preschool children.

GOAL(S) OR PURPOSE(S)

The participants will: (1) Recognize that their attitudes, behavior, and feelings affect their child; (2) understand the value of home activities in helping children learn; and (3) be able to use home materials and activities with their children.

PATTERNS OF USE

Sessions are sequential and cumulative.

ASSESSMENT PROVISIONS

Tests of participant knowledge of module content are provided for use at the beginning of the study and following completion of the package. In addition, criterion-referenced tests of content of each session are provided.

TIME REQUIREMENTS

The package consists of five sessions, each requiring a period of approximately 1 hour 30 minutes.

IMPLEMENTATION PROCEDURES

Audiovisual equipment is required.

No specific previous training is required, but a 1-day training session for leaders is recommended.

ASSURANCES AND CLAIMS

Assurances

No reports of harm—physical, psychological, sociological, or other—have been received at this time as a consequence of any activity of the product. Additional data will be collected during pilot and field testing.

No complaints of ethnic or sex-role bias have been received at this time. Additional data will be collected during pilot and field testing.

Claims

The Southwest Educational Development Laboratory follows a systematic process for the development of educational products. This product development incorporates the entire gamut of activities in the formulation, development, testing, and evaluation of an educational product so that quality is assured.

Products are cycled through design test, after which materials are revised on the basis of feedback from the target population, leaders, and observers; then through pilot test, and revised on the basis of feedback; and finally through field test, after which a final revision based on field data is made.

The multimedia training package for Spanish-speaking parents, *Viviendo y Aprendiendo en el Hogar*, is being cycled through the laboratory's developmental process, and field revisions will be complete by November 30, 1975.

AVAILABILITY

The product exists in prepublication form only; no copies are available for distribution at this time.

Development of two additional modules began in spring 1975, with a projected completion date of December 1975.

INFORMATION CURRENT AS OF MARCH 1975 ■

BILINGUAL ORAL LANGUAGE AND READING (BOLAR), GRADE 1

A comprehensive program including English and Spanish components

The *Bilingual Oral Language and Reading* (BOLAR) system is a comprehensive bilingual-bicultural program composed of two carefully sequenced and interrelated components: (1) English Oral Language and Reading and (2) Spanish Oral Language and Reading. Appropriate progression through the curriculum allows children of either language dominance to develop oral, reading, and writing skills in both Spanish and English.

The program employs an eclectic approach which includes: (1) A heavy stress on language experience as a basic, motivational tool for teaching reading; (2) a modified version of the audiolingual approach to second-language instruction; (3) the sight-word approach to English reading with a gradual introduction of phonics; (4) the phonic, sound-to-symbol, approach to Spanish reading; and (5) careful component sequencing and cross-component correlation to promote children's success and elevated self-concept.

In the Spanish oral-language strand of the program, basic conversational Spanish language patterns are taught through a series of small-group activities. Lessons are presented as diverse situations created to exemplify specific language elements. The teacher encourages children to participate first through dramatization in the form of dialogs with puppets and then through dialogs among themselves. This nonthreatening setting enables students to gain both the self-confidence and the language proficiency to begin to read and write in Spanish.

Spanish reading is introduced through the language experience approach, which establishes the awareness that reading is just "talk written down" and provides motivation to read by giving children opportunities to see their own "talk written down." The basis for phonic sound-to-symbol, instruction lies in: (1) Comprehensive skills workbooks which provide exercises in visual/auditory discrimination and other prereading skills, (2) exercises introducing and reinforcing Spanish vowel and consonant sounds and symbols, (3) selections to read for comprehension, (4) syllabication exercises, and (5) reinforcement and enrichment activities. A series of independent readers allows children to apply their skills to interesting reading materials and provides incentive for further reading.

In the English oral-language strand, basic conversational English language patterns are taught through a series of small-group activities. Children learn to talk about home, family, neighborhood, school, and other familiar topics in a nonthreatening setting, thereby gaining both the self-confidence and the language proficiency to begin to read and write English. Special attention is paid to phonology through classroom exercises accompanied by visuals, which make use of the "minimal pair" approach to contrasting linguistic elements.

The English reading strand is composed of three interrelated sequences. The language experience approach establishes the awareness that reading is just "talk written down" and provides motivation to read by giving students opportunities to see their own "talk written down." The sight-word approach teaches children fundamental vocabulary and function words, in addition to important comprehension skills. The third sequence, which includes visual/auditory discrimination and introductory phonics, correlates with the language experience and sight-word sequences; children receive additional decoding skills as they move toward independent, self-motivated reading. Two staff development manuals present both theoretical background and implementation guidelines.

SUBJECT AREA(S)

Both the English and Spanish oral-language strands teach basic conversational language patterns to second-language learners as preparation for reading and writing. Both reading strands use language experience sharing to introduce reading to both 1st- and 2d-language learners; this approach is based on children's own interests and is highly motivational. To minimize linguistic interference, the sight-word approach is used in the English reading strand with gradual introduction of phonics. The Spanish reading strand uses the phonic approach exclusively because of the close correlation between the Spanish letters and their sounds. Independent reading of interesting printed materials with minimal teacher intervention is an important element of both strands.

INTENDED USERS AND BENEFICIARIES

BOLAR, grade 1 instructional materials not only meet the needs of Spanish-speaking 1st graders in mixed or homogeneous settings, but also may be presented in the bilingual, ESL (English as a second language), SSL (Spanish as a second language) modes, or any combination of these modes suited to local circumstances and administrative conditions.

GOAL(S) OR PURPOSE(S)

To introduce children to Spanish and English oral language and reading through a meaningful combination of approaches: (1) Language experience sharing in both languages; (2) a modified audiolingual approach to second-language learning; (3) the sight-word approach to English reading with a gradual introduction to phonics; and (5) the phonic, sound-to-symbol, approach to Spanish reading.

PATTERNS OF USE

The components and the strands within them are sequential and cumulative. The strands are taught alternately and/or concurrently.

ASSESSMENT PROVISIONS

The teacher assesses language experience, oral language, and sight-word progress through informal measures suggested in the teacher's manuals; student workbooks include systematic evaluations. The teacher also administers criterion-referenced tests designed primarily for postinstructional assessment. These tests, which are easily administered and scored, may be used also as diagnostic instruments to determine initial placement.

TIME REQUIREMENTS

The program is designed to be used for 2 hours a day for 1 year. In terms of daily scheduling, the amount of time spent on each strand's small-group instruction depends upon several factors: (1) The language dominance of individual class members, (2) the range of developmental levels represented in the class, (3) the total number of students in the class, (4) the number of adults present in the classroom, and (5) other circumstances prevailing at the user site.

IMPLEMENTATION PROCEDURES

The program requires no special equipment or facilities. Because the product is transportable, or self-contained, no teacher training is necessary if each participating teacher becomes thoroughly familiar with the information presented in the two staff development manuals and teacher's manuals accompanying the student curriculum materials.

Personnel Required for Product Adoption and Implementation

Because of the program's small-group approach and emphasis on individual progress, each user classroom should have one teacher and at least one instructional assistant. The ideal situation is that both of these individuals be bilingual, but at least one of them should be. In cases of classrooms with no bilingual instructor, an arrangement may be worked out in which a bilingual teacher "rotates" or exchanges certain responsibilities with a monolingual English-speaking teacher.

Teachers must familiarize themselves with the theoretical background and implementation procedures included in the staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*; they must also read the teacher's manuals accompanying the curriculum materials.

ASSURANCES AND CLAIMS

Assurances

Formative and summative data obtained during a 6-year development and installation process have yielded no substantial expressed concern by pilot and field sites or dissemination sites regarding possible physical, psychological, or sociological harm resulting from the curriculum use. The materials were developed and installed by multiethnic staff, consultants, and practitioners in the field.

Social and cultural fairness have been a major concern of the multiethnic staff from the beginning of the development of the materials. A stringent test of cultural fairness of the completed system was the textbook review process of the State of Texas. The curriculum system passed this process and was adopted as approved materials for the State of Texas.

Assurance of replicability and transportability rests on a widespread installation of the curriculum system in numerous school systems in several States.

Claims

Target pupils for the BOLAR, grade 1 instructional materials demonstrated significant performance gains in both Spanish and English language comprehension, as measured by the tests of basic experience-language (Spanish and English versions). In comparison to similar children with more traditional language instruction, the target pupils demonstrated comparable gains in English and significantly greater Spanish language gains. The latter data, resulting from a tightly controlled covariance design, indicate that pupils taught with the BOLAR materials may be expected to maintain a "normal" rate of English language acquisition while experiencing the benefit of instruction and skills development in the Spanish language. Data from criterion-referenced mastery tests, designed for postinstructional determination of concepts acquisition, reveal that an average of more than 75 percent of the target pupils exhibited desired concept mastery outcomes. Higher performance levels were evidenced for Spanish and oral language instructional objectives. In response to the pupil attitude inventory, a measure of pupil affect toward the four BOLAR instructional components, an average of more than 80 percent of the field test pupils indicated positive attitudes toward their learning experience. Pupil reaction was more favorable toward the English and oral language classroom activities. Of the classroom teachers and aides responding to the user questionnaire, 89 percent expressed a desire to use the BOLAR materials the following school year.

The BOLAR, grade 1 instructional system is a product of the Southwest Educational Development Laboratory's multistage development process, in which educational products and practices are revised and refined to their final form based on extensive "in-the-classroom" testing and practitioner feedback. Data on which product claims are based were obtained during field test of the materials with predominately native Spanish-speaking children of migratory agricultural workers in south Texas. The field-test evaluation and teacher training were conducted by persons independent of the program development staff. Some structural refinements to the program have been made since field testing was completed in 1973. For example, the four program components–*Spanish Oral Language, English Oral Language, Spanish Reading, and English Reading*–were separated into discrete packages rather than remaining a single package, and the number of mastery tests was reduced from 11 to 8. The educational content of the materials was not appreciably altered, making it unlikely that the recent product changes, made primarily for marketing purposes, would alter the evaluative evidence to a significant extent.

INFORMATION CURRENT AS OF MARCH 1975 ■

BILINGUAL ORAL LANGUAGE AND READING (BOLAR), ENGLISH ORAL LANGUAGE, GRADE 1

A program which employs a modified version of the audiolingual approach to English-as-a-second-language instruction

Basic language patterns and vocabulary are based upon: (1) The findings of several research studies conducted to analyze the language patterns of Spanish-speaking kindergarten and 1st-grade children; (2) formative and summative feedback from design-, pilot-, and field-test sites throughout the United States (Texas, California, Idaho, Pennsylvania); and (3) a systematic comparative analysis of English and Spanish phonology, syntax, lexicon, and semantics.

The component employs a modified version of the audiolingual approach to English-as-a-second-language instruction, complemented by situational reinforcement and activities which encourage creative self-expression; the lesson objectives do not require set responses. Special attention is paid to phonology; this is specifically addressed in a supplemental publication, *English Pronunciation, Book 1*. Oral classroom exercises, accompanied by visuals, make use of the "minimal pair" approach to contrasting linguistic elements.

Two basic teacher's manuals, *Oral Language, Book 1*, and *Oral Language, Book 2*, contain lessons focusing on elementary environmental information such as names and addresses, articles of clothing, colors, location of objects, and actions in progress. Children acquire adequate language to use English effectively in everyday situations; the activity topics serve as a framework for teaching this functional language.

The teacher involves small groups of children in language activities, each of which is designed to teach specific language patterns. Drill exercises and repetition are used only until the basic structures are established; then students participate in more informal, though related, practice activities such as dialogs, games, poems, stories, songs, and rhymes.

Two staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*, present both theoretical background and implementation guidelines. (Note: These manuals are applicable across all BOLAR components.)

SUBJECT AREA(S)

Basic conversational English language patterns are taught through a series of small-group activities. Children learn to talk about home, family, neighborhood, school, and other familiar topics in a nonthreatening setting, thereby gaining both the self-confidence and the language proficiency to begin to read and write English effectively and with understanding.

INTENDED USERS AND BENEFICIARIES

The component is designed primarily for native Spanish-speaking students who enter 1st grade with minimal English language proficiency. However, the activities can be adapted for use with kindergarten level children, as well as 2d- or 3d-graders for whom basic English instruction would be beneficial.

GOAL(S) OR PURPOSE(S)

The four basic goals of the *English Oral Language* component are to enable children: (1) To master basic English structures through a variety of drills and informal activities, (2) to use basic English structures in a variety of situations, (3) to develop oral language competence in English in order to be prepared for reading and writing, and (4) to master the English sounds which are not part of the home language.

PATTERNS OF USE

The lessons, and the activities within them, are sequential and cumulative.

ASSESSMENT PROVISIONS

The teacher assesses student progress by using the integration activities (evaluations) included at certain points in the teacher's manuals; these may be used as postinstructional assessments or for diagnostic instruments to determine initial placement. The teacher also administers criterion-referenced mastery tests designed primarily for postinstructional assessment. These tests, which are easily administered and scored, may also be used as diagnostic instruments to determine initial placement. One mastery test accompanies each of the teacher's manuals.

TIME REQUIREMENTS

The component is designed to be used for an average of 30 minutes each day for 1 year, an estimate that is very flexible in terms of daily scheduling. The actual amount of time spent in the component's small-group activities depends upon several factors. These include: (1) The language dominance of individual class members, (2) the range of developmental levels represented in the class, (3) the total number of students in the class, (4) the number of adults present in the classroom, and (5) other circumstances prevailing at the user site.

IMPLEMENTATION PROCEDURES

The component requires no special equipment or facilities. Because the product is transportable, or self-contained, no teacher training is necessary if each participating teacher becomes thoroughly familiar with the information presented in the two staff development manuals and the teacher's manuals accompanying the student curriculum materials.

Because of the component's small-group approach and emphasis on individual progress, each user classroom should have one teacher and at least one instructional assistant. These individuals must familiarize themselves with the theoretical background and implementation procedures included in the staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*; they must also read the teacher's manuals carefully to become familiar with the language teaching strategies inherent in the component.

Teaching the component does not require bilingual ability. However, in classrooms including native Spanish-speaking children, at least one of the instructional personnel should have some Spanish proficiency to be able to understand the children and make simple explanations. When the component is used in conjunction with corresponding Spanish components, a bilingual instructor is necessary.

ASSURANCES AND CLAIMS

The *English Oral Language Component* of the *BOLOR System for Grade 1* (including portions of earlier versions, designated as Language Development and Reading, and adaptations of the materials by the SEDL Follow Through Program) has been used and tested in more than 90 classrooms in 5 States. Formative data obtained during this multiyear development process were used for program revision and refinement. These data provided no indication of sociological, psychological, or physical harm to pupils exposed to the materials.

BOLAR instructional materials—including the *English Oral Language Component*—have been approved for statewide textbook adoption beginning in September 1975 by the State Board of Education of Texas. During the State textbook approval process, the materials are made available for critical review by both professional and special-interest groups. Testimony, solicited from these groups by the State Textbook Committee in open hearings, indicated that the products contained no materials considered to be biased toward any ethnic, sex, or cultural groups.

The BOLAR program has been field tested with predominately native Spanish-speaking migrant pupils with no direct interaction between program developers and program users. A 1-day preservice teacher training session is considered beneficial for teachers who are not experienced in Spanish-English instruction. The training may be provided by SEDL or by other persons who are familiar with the program's instructional methodology Since completion of field testing in 1973, over 200 complete BOLAR curriculum packages have been purchased for classroom use. Over 50 others are using components of the BOLAR system. As the BOLAR materials represent the only grade-1 bilingual curriculum for language instruction approved for Texas textbook adoption beginning in 1975-76, the number of users is expected to at least quadruple during the next year.

SPANISH ORAL LANGUAGE, GRADE 1 (PART OF BILINGUAL ORAL LANGUAGE AND READING PROGRAM)

A program which employs a situational approach in which Spanish is used as a means for conveying ideas and information in meaningful contexts

Two teacher manuals, *Expresión Oral, Libro 1*, and *Expresión Oral, Libro 2*, contain lessons based on the most basic patterns of Spanish: The elements with which native speakers of Spanish form and produce sentences. The program is sequenced from easy to difficult and from concrete to abstract. The lessons are designed to present diverse situations created to exemplify syntactical structures, patterns of intonation, and vocabulary that children should learn. Pronunciation is stressed in early lessons in order to take advantage of children's ability and willingness to mimic and reproduce sounds. Vocabulary items are introduced only within the sentence structures being taught; they are not singled out and taught separately, i.e., students learn only enough vocabulary to manipulate the structures.

The component employs a situational approach, in which Spanish is used as a means for conveying ideas and information in meaningful contexts. At all times, students must know and understand the meaning of the language being used; language must always be correlated with behavior. Puppets play an important role, especially in the introduction and demonstration of new structures. Lesson development follows these basic steps: (1) Observation of a dialogue between the teacher and the puppets; (2) limited participation in the dialogue by the children through dramatization; and (3) full participation, as the children conduct the dialogue among themselves.

Basic language patterns and vocabulary are based upon: (1) The findings of several research studies conducted to analyze the language patterns of Spanish-speaking kindergarten and 1st-grade children; (2) formative and summative feedback from design-, pilot-, and field-test sites throughout the United States (Texas, California, Idaho, Pennsylvania); and (3) systematic comparative analysis of English and Spanish phonology, syntax, lexicon, and semantics.

Two staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*, present both theoretical background and implementation guidelines. (Note: These manuals are applicable across all *Bilingual Oral Language and Reading* (BOLAR) components.)

SUBJECT AREA(S)

Basic conversational Spanish language patterns are taught through a series of small-group activities. Lessons are presented as diverse situations created to exemplify specific language elements. The teacher encourages children to participate first through dramatization in the form of dialogs with puppets and then through dialogs among themselves. This nonthreatening setting enables students to gain both the self-confidence and the language proficiency to begin to read and write in Spanish.

INTENDED USERS AND BENEFICIARIES

The component is intended for children whose native language is English or children who have little knowledge of Spanish.

GOAL(S) OR PURPOSE(S)

The four basic goals of the *Spanish Oral Language Component* are to enable students: (1) To develop the ability to understand and reproduce Spanish language structures; (2) to develop the ability to understand and use basic Spanish language structures in communicative situations; (3) to develop understanding and appreciation of the culture, the customs, and the traditions of the Spanish-speaking population of the United States; and (4) to develop oral language competence in Spanish in order to be prepared for reading and writing.

PATTERNS OF USE

The lessons are sequential and cumulative.

ASSESSMENT PROVISIONS

The teacher assesses student progress by using the informal evaluations at the end of each lesson according to suggestions in the teacher manuals. The teacher also administers criterion-referenced mastery tests designed primarily for postinstructional assessment. These tests, which are easily administered and scored, may also be used as diagnostic instruments to determine initial placement.

TIME REQUIREMENTS

The component is designed to be used for an average of 30 minutes a day for 1 year, an estimate that is very flexible in terms of daily scheduling. The actual amount of time spent in the component's small-group activities depends upon several factors. These include: (1) The language dominance of individual class members, (2) the range of developmental levels represented in the class, (3) the total number of students in the class, (4) the number of adults present in the classroom, and (5) other circumstances prevailing at the user site(s).

IMPLEMENTATION PROCEDURES

The component requires no special equipment or facilities. Because the product is transportable, or self-contained, no teacher training is necessary if each participating teacher becomes thoroughly familiar with the information presented in the two staff development manuals and the teacher manuals accompanying the student curriculum materials.

Because of the component's small-group approach and emphasis on individual progress, each user classroom should have one teacher and at least one instructional assistant. The ideal situation is that both of these individuals be bilingual; at least one of them should be. In cases of classrooms with no bilingual instructor, an arrangement may be worked out in which a bilingual teacher "rotates" or exchanges oral language responsibilities with a monolingual English-speaking teacher.

Teachers must familiarize themselves with the theoretical background and implementation procedures included in the staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*; they must also read the teacher manuals accompanying each strand of the product.

ASSURANCES AND CLAIMS

The *Spanish Oral Language Component* of the BOLAR system for Grade 1 (including portions of earlier versions, designated as language development and reading, and adaptations of the materials by the SEDL Follow Through Program) has been used and tested in more than 50 classrooms in 5 States. Formative data obtained during this multiyear development process were used for program revision and refinement. These data provided no indication of sociological, psychological, or physical harm to pupils exposed to the materials.

BOLAR instructional materials—including the Spanish oral language component—have been approved for statewide textbook adoption beginning September 1975 by the State Board of Education of Texas. During the State textbook approval process, the materials are made available for critical review by both professional and special interest groups. Testimony, solicited from these groups by the State textbook committee in open hearings, indicated that the products contained no materials considered to be biased toward any ethnic, sex, or cultural groups.

The BOLAR program has been field tested with predominately native Spanish-speaking migrant pupils with no direct interaction between program developers and program users. A 1-day preservice teacher training session is considered beneficial for teachers who are [illegible] experienced in Spanish-English instruction. [illegible] [illegible]ning may be provided by SEDL or by other bi[illegible]ucators who are familiar with the program's instruc[illegible] methodology. Since completion of field testing in 1973, over 200 complete BOLAR curriculum packages have been purchased for classroom use. Over 50 others are using components of the BOLAR system. As the BOLAR materials represent the only grade 1 bilingual curriculum for language instruction approved for Texas textbook adoption beginning in 1975-76, the number of users is expected to at least quadruple during the next year.

INFORMATION CURRENT AS OF MARCH 1975 ■

BILINGUAL ORAL LANGUAGE AND READING (BOLAR), ENGLISH READING, GRADE 1

A program which makes use of the most relevant features of language experience: Sight reading and phonics

The 1st-grade English reading program employs an eclectic approach which evolved as the result of: (1) Extensive research studies of the language patterns of bilingual children; (2) systematic comparative analysis of the phonology, syntax, lexicon, and semantics of both Spanish and English and indepth analysis of decoding skills in both languages from which evolved materials which minimize language interference and maximize positive language transfer in the reading process; and (3) formative and summative feedback from design-, pilot-, and field-test sites throughout the United States (Texas, California, Idaho, Pennsylvania).

The component makes use of the most relevant features of language experience, sight reading, and phonics. Reading is first introduced through a systematic program of language experience sharing in which children's spoken language is recorded and "read." This initial and ongoing teaching strategy is based on the premise that students will want to read about things that are of interest to them. A teacher manual, *The Language Experience Approach to Reading*, contains information and guidelines for conducting language experience sessions.

Students then participate in small-group, sight-word reading activities in which familiar spoken patterns are presented in a series of pocket chart stories. The sight-word approach is used in order to maximize the learning of whole communications as well as to minimize any possible interference caused by the differing sound-to-symbol relationships of Spanish and English. The seven sight-word strategies first focus upon reading entire stories and sentences and then isolated words. Modeling, substituting, matching, and framing are used to teach basic vocabulary and function words; closing, dialoging, and composing are the unique strategies which serve as comprehension checks in lieu of the oral and written questions found in traditional reading programs. The sight-word strand of the component also includes 19 short readers designed for independent reading by children as they master vocabulary and function words. Two teacher's manuals, *Reading English, Book 1*, and *Reading English, Book 2*, delineate detailed procedures for implementing the BOLAR sight-word approach. Flashcards and a complete set of student readers accompany the manuals.

The component includes two student workbooks designed to help children develop and practice visual discrimination, visual memory, sound-to-symbol association of consonants (both initial and final) and final digraphs, letter names, and letter formation. The consonant sounds introduced are those shown by comparative analysis to have the same or very similar sound-to-symbol relationships as the corresponding Spanish consonants, a further step toward minimizing language interference. The skills books are used in conjunction with both the language experience approach and the sight-reading strategies to gradually provide increasingly effective decoding skills. These books, *Basic Reading Skills, Book 1*, and *Basic Reading Skills, Book 2*, are accompanied by teacher's manuals which bear the same titles.

Two staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*, present both theoretical background and implementation guidelines. (Note: These manuals are applicable across all bilingual oral language and reading (BOLAR) components.)

SUBJECT AREA(S)

Three interrelated strands comprise the 1st-grade English reading component. The language experience approach establishes the awareness that reading is just "talk written down" and provides motivation to read by giving students opportunities to see their own "talk written down." The sight-word approach teaches children fundamental vocabulary and function words, in addition to important comprehension skills. The third strand, which includes visual/auditory discrimination and introductory phonics, is sequenced in correlation with the language experience and sight-word strands; children receive additional decoding skills as they move toward independent, self-motivated reading.

RD 110 029

INTENDED USERS AND BENEFICIARIES

The component is designed primarily for native Spanish-speaking students who enter 1st grade with minimal English language proficiency. It can, however, be used with students of undetermined Spanish/English language dominance or native English speakers. If used as a second language reading program, students should receive prior English oral language instruction.

GOAL(S) OR PURPOSE(S)

To introduce students to reading through a meaningful combination of approaches: Language experience sharing, initially in the dominant language and, subsequently, in the second language; sight-word reading with enough flexibility and variety to allow individual success; and visual/auditory discrimination and elementary phonics to provide important complementary decoding skills.

PATTERNS OF USE

The lessons and activities within each strand are sequential and cumulative; the three strands are taught concurrently and/or alternately.

ASSESSMENT PROVISIONS

The teacher assesses language experience and sight-word progress through informal measures suggested in the teacher manuals; the visual discrimination/visual memory sections include diagnostic pretests and posttests to evaluate individual progress; the phonics workbook includes evaluation as every fifth lesson. The teacher also administers criterion-referenced mastery tests designed primarily for postinstructional assessment. These tests, which are easily administered and scored, may also be used as diagnostic instruments to determine initial placement. The component includes two comprehensive mastery tests.

TIME REQUIREMENTS

The component is designed to be used for an average of 30 minutes a day for 1 year, an estimate that is very flexible in terms of daily scheduling. The actual amount of time spent in the component's small-group activities depends upon several factors. These include: (1) The language dominance of individual class members, (2) the range of developmental levels represented in the class, (3) the total number of students in the class, (4) the number of adults present in the classroom, and (5) other circumstances prevailing at the user site(s).

IMPLEMENTATION PROCEDURES

The component requires no special equipment or facilities. Because the product is transportable, or self-contained, no teacher training is necessary if each participating teacher becomes thoroughly familiar with the information presented in the two staff development manuals and the teacher manuals accompanying the student curriculum materials.

Because of the component's small-group approach and emphasis on individual progress, each user classroom should have one teacher and at least one instructional assistant. These individuals must familiarize themselves with the theoretical background and implementation procedures included in the staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*; they must also read the teacher manuals accompanying each strand of the component.

Teaching the component does not require bilingual ability. However, in classrooms including native Spanish-speaking children, at least one of the instructional personnel should have some Spanish proficiency to be able to understand the children and make simple explanations. When the component is used in conjunction with corresponding Spanish components, a bilingual instructor is, of course, necessary. The program is designed to be self-contained or replicable. However, teacher reaction from demonstration sites indicates that SEDL consultant services are extremely helpful.

ASSURANCES AND CLAIMS

The *English Reading* component of the BOLAR system for grade 1 (including portions of earlier versions, designated as language development and reading, and adaptations of the materials by the SEDL followthrough program) has been used and tested in more than 90 classrooms in 5 States. Formative data obtained during this multiyear development process were used for program revision and refinement. These data provided no indication of sociological, psychological, or physical harm to pupils exposed to the BOLAR materials.

BOLAR instructional materials—including the *English Reading* component—have been approved for statewide textbook adoption beginning September 1975 by the State Board of Education of Texas. During the State textbook approval process, the materials are made available for critical review by both professional and special interest groups. Testimony, solicited from these groups by the State textbook committee in open hearings, indicated that the products contained no materials considered to be biased toward any ethnic, sex, or cultural groups.

The BOLAR program has been field tested with predominately native Spanish-speaking migrant pupils with no direct interaction between program developers and program users. A 1-day preservice teacher training session is considered beneficial for teachers who are not experienced in Spanish-English instruction. The training may be provided by SEDL or by other persons who are familiar with the program's instructional methodology. Since completion of field testing in 1973, over 200 complete BOLAR curriculum packages have been purchased for classroom use. Over 50 others are using components of the BOLAR system. As the BOLAR materials represent the only grade-1 bilingual curriculum for language instruction approved for Texas textbook adoption beginning 1975-76, the number of users is expected to at least quadruple during the next year.

SPANISH READING, GRADE 1 (PART OF THE BILINGUAL ORAL LANGUAGE AND READING PROGRAM)

A systematic program of language experience based on the premise that children will read about things that are of interest to them

Spanish Reading, Grade 1, employs an eclectic approach which evolved as the result of: (1) Extensive research studies of the language patterns of bilingual children which produced language patterns and vocabulary incorporated into the initial lessons based on the findings of these studies; (2) systematic comparative analysis of the phonology, syntax, lexicon, and semantics of both Spanish and English and indepth analysis of decoding skills in both languages, from which evolved materials which minimize language interference and maximize positive language transfer in the reading process; (3) an analysis of 15 reading programs for the purpose of identifying methodological patterns in the teaching of reading in Spanish-speaking countries; (4) formative and summative feedback from design-, pilot-, and field-test sites throughout the United States (Texas, California, Idaho, Pennsylvania); and (5) interviews with bilingual children in Texas, California, and Pennsylvania to determine their interests. The topics in the Spanish readers were selected from a list prepared during these interviews.

Reading is first introduced through a systematic program of language experience sharing in which students' spoken language is recorded and "read." This initial strategy is based on the premise that children will want to read about things that are of interest to them. A teacher's manual, *Lectura a Base de Experiencias*, contains information and guidelines for conducting language experience sessions. Another manual, *Composición Oral y Escrita*, is designed to help children develop the capacity to relate their own experiences to verbal and written expression. This manual contains a series of lessons based on everyday experiences, problem-solving situations, and other topics intended to develop critical thinking and self-expression; it is intended for use throughout the year and ultimately results in original compositions written by students.

Because of the close correlation between the Spanish letters and their sounds, the phonic, sound-to-symbol, approach is used systematically throughout the rest of the Spanish reading program. Two skills workbooks, *Lectura y Escritura, Libro 1,* and *Lectura y Escritura, Libro 2,* include prereading exercises including motor coordination, left-to-right progression, and visual/auditory perception, in addition to instruction in reading and writing of words and sentences containing the five Spanish vowel sounds and symbols and all of the consonants. The skills books also provide practice in reading for comprehension, oral discussion, and syllabication (an important and dependable element in the Spanish language). In addition to the sequence of developmental steps aimed at teaching the basic sound-to-symbol relationships of Spanish, the *Lectura y Escritura* series includes a wide range of enrichment activities which provides reinforcement of word recognition and comprehension skills. Teacher manuals accompanying the student workbooks bear the same titles. A series of five readers complements and reinforces the skills books. These readers are designed and written for children to read independently, after specific cumulative skills buildups, allowing immediate application of learned skills to interesting and appropriate reading materials and providing incentive for further reading.

Two staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*, present both theoretical background and implementation guidelines. (Note: These manuals are applicable across all bilingual oral language and reading (BOLAR) products.)

SUBJECT AREA(S)

Reading is introduced through the language experience approach, which establishes the awareness that reading is just "talk written down" and provides motivation to read by giving children opportunities to see their own "talk written down." The phonic approach is used throughout the rest of the product. The basis for instruction lies in (1) comprehensive skills workbooks which provide exercises in visual/auditory discrimination and other prereading skills, (2) exercises introducing and reinforcing Spanish vowel and consonant sounds and symbols, (3) selections to read for comprehension, (4) syllabication exercises, and (5) reinforcement activities. A series of independent readers allows children to apply their skills to interesting reading materials and provides incentive for reading further.

INTENDED USERS AND BENEFICIARIES

The product is designed for use with native Spanish-speaking students as their first reading experience or with native English speakers after prior oral language instruction.

GOAL(S) OR PURPOSE(S)

To introduce students to reading the Spanish language by a meaningful combination of approaches: Language experience sharing, through which children become aware of what reading actually is (the spoken word written down), and a sytematic phonic program in which basic decoding skills are acquired and applied in appropriate contexts.

PATTERNS OF USE

The lessons and activities within each strand are sequential and cumulative; the strands are taught concurrently and/or alternately.

ASSESSMENT PROVISIONS

The teacher assesses student progress in language experience and composition through informal measures suggested in the teacher manuals; the skills books include an evaluation page at the end of each lesson. The teacher also administers criterion-referenced mastery tests designed primarily for postinstructional assessment. These tests, which are easily administered and scored, may also be used as diagnostic instruments to determine initial placement. One mastery test accompanies each of the student workbooks.

TIME REQUIREMENTS

The product is designed to be used for an average of 30 minutes a day for 1 year, an estimate that is very flexible in terms of daily scheduling. The actual amount of time spent in the product's small-group activities depends upon several factors. These include: (1) The language dominance of individual class members, (2) the range of developmental levels represented in the class, (3) the total number of students in the class, (4) the number of adults present in the classroom, and (5) other circumstances prevailing at the user site(s).

IMPLEMENTATION PROCEDURES

The product requires no special equipment or facilities. Because the product is transportable, or self-contained, no teacher training is necessary if each participating teacher becomes thoroughly familiar with the information presented in the two staff development manuals and the teacher manuals accompanying the student curriculum materials.

Because of the product's small-group approach and emphasis on individual progress, each user classroom should have one teacher and at least one instructional assistant. The ideal situation is that both of these individuals be bilingual; at least one of them should be. In cases of classrooms with no bilingual instructor, an arrangement may be worked out in which a bilingual teacher "rotates" or exchanges reading responsibilities with a monolingual English-speaking teacher.

Teachers must familiarize themselves with the theoretical background and implementation procedures included in the staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*; they must also read the teacher manuals accompanying each strand of the product.

ASSURANCES AND CLAIMS

The *Spanish Reading, Grade 1,* product of the bilingual oral language and reading system (including portions of earlier versions, designated as Language Development and Reading, and adaptations of the materials by the SEDL followthrough program) has been used and tested in more than 50 classrooms in 4 States. Formative data obtained during this multiyear development process were used for program revision and refinement. These data provided no indication of sociological, psychological, or physical harm to pupils exposed to the BOLAR materials.

BOLAR instructional materials—including the Spanish reading product—have been approved for statewide textbook adoption beginning September 1975 by the State Board of Education of Texas. During the State textbook approval process, the materials are made available for critical review by both professional and special interest groups. Testimony, solicited from these groups by the State textbook committee in open hearings, indicated that the products contained no materials considered to be biased toward any ethnic, sex, or cultural groups. As a result of some testimony provided during the hearings, the committee requested that the publisher of the BOLAR materials perform several editorial changes to reduce the usage of regional idioms in some of the Spanish reading books.

The BOLAR program has been field tested with predominately native Spanish-speaking migrant pupils with no direct interaction between program developers and program users. A 1-day preservice teacher training session is considered beneficial for teachers who are not experienced in Spanish-English instruction. The training may be provided by SEDL or by other bilingual educators who are familiar with the program's instructional methodology. Since completion of field testing in 1973, over 200 complete BOLAR curriculum packages have been purchased for classroom use. Over 50 others are using components of the BOLAR system. As the BOLAR materials represent the only grade 1 bilingual curriculum for language instruction approved for Texas textbook adoption beginning 1975-76, the number of users is expected to at least quadruple during the next year.

INFORMATION CURRENT AS OF MARCH 1975 ■

BILINGUAL ORAL LANGUAGE AND READING (BOLAR), GRADE 2

A comprehensive program composed of two carefully sequenced and interrelated English and Spanish components

The *Bilingual Oral Language and Reading* (BOLAR) system is a comprehensive bilingual-bicultural program composed of two carefully sequenced and interrelated components: (1) English oral language and reading and (2) Spanish oral language and reading. Appropriate progression through the curriculum allows children of either language dominance to develop oral, reading, and writing skills in both Spanish and English.

The program employs an eclectic approach which includes: (1) A heavy stress on language experience as a basic, motivational tool for teaching reading; (2) a modified version of the audiolingual approach to second-language instruction; (3) the sight-word approach to English reading with a gradual introduction of phonics; (4) the phonic, sound-to-symbol, approach to Spanish reading; and (5) careful component sequencing and cross-component correlation to promote children's success and elevated self-concept.

In the Spanish oral language strand of the program, basic conversational Spanish language patterns are taught through a series of small-group activities. Lessons are presented as diverse situations created to exemplify specific language elements. The teacher encourages children to participate first through dramatization in the form of dialogs with puppets and then through dialogs among themselves. This nonthreatening setting enables students to gain both the self-confidence and the language proficiency to begin to read and write in Spanish.

Spanish reading is introduced through the language experience approach, which establishes the awareness that reading is just "talk written down" and provides motivation to read by giving children opportunities to see their own "talk written down." The basis for phonic, sound-to-symbol instruction lies in: (1) Comprehensive skills workbooks which provide exercises in visual/auditory discrimination and other prereading skills, (2) exercises introducing and reinforcing Spanish vowel and consonant sounds and symbols, (3) selections to read for comprehension, (4) syllabication exercises, and (5) reinforcement and enrichment activities. A series of independent readers allows children to apply their skills to interesting reading materials and provides incentive for further reading.

In the English oral-language strand, basic conversational English language patterns are taught through a series of small-group activities. Children learn to talk about home, family, neighborhood, school, and other familiar topics in a nonthreatening setting, thereby gaining both the self-confidence and the language proficiency to begin to read and write English. Special attention is paid to phonology through classroom exercises accompanied by visuals, which make use of the "minimal pair" approach to contrasting linguistic elements.

The English reading strand is composed of three interrelated sequences. The language experience approach follows the pattern of the Spanish reading approach. The sight-word approach teaches children fundamental vocabulary and function words, in addition to important comprehension skills. The third sequence, which includes visual/auditory discrimination and introductory phonics, correlates with the language experience and sight-word sequences; children receive additional decoding skills as they move toward independent, self-motivated reading. Two staff development manuals present both theoretical background and implementation guidelines.

SUBJECT AREA(S)

Both the English and Spanish oral-language strands teach basic conversational language patterns to second-language learners as preparation for reading and writing. Both reading strands use language experience sharing to introduce reading to both 1st- and 2d-language learners; this approach is based on children's own interests and is highly motivational. To minimize linguistic interference, the sight-word approach is used in the English reading strand with gradual introduction of phonics. The Spanish reading strand uses the phonic approach exclusively because of the close correlation between the Spanish letters and their sounds. Independent reading of interesting printed materials with minimal teacher intervention is an important element of both strands.

RD 110 031

INTENDED USERS AND BENEFICIARIES

BOLAR, Grade 2 instructional materials not only meet the needs of Spanish-speaking students in mixed or homogeneous settings, but also may be presented in the bilingual, ESL (English as a second language), SSL (Spanish as a second language) modes, or any combination of these modes suited to local circumstances and administrative conditions.

GOAL(S) OR PURPOSE(S)

To introduce children to Spanish and English oral language and reading through a meaningful combination of approaches: (1) Language experience sharing in both languages; (2) a modified audiolingual approach to second-language learning, (3) the sight-word approach to English reading with a gradual introduction to phonics; and (5) the phonic, sound-to-symbol, approach to Spanish reading.

PATTERNS OF USE

The components and the strands within them are sequential and cumulative. The strands are taught alternately and/or concurrently.

ASSESSMENT PROVISIONS

The teacher assesses language experience, oral language, and sight-word progress through informal measures suggested in the teacher's manuals; student workbooks include systematic evaluations. The teacher also administers criterion-referenced tests designed primarily for postinstructional assessment. These tests, which are easily administered and scored, may also be used as diagnostic instruments to determine initial placement.

TIME REQUIREMENTS

The program is designed to be used for 2 hours each day for 1 year. In terms of daily scheduling, the amount of time spent on each strand's small-group instruction depends upon several factors: (1) The language dominance of individual class members, (2) the range of developmental levels represented in the class, (3) the total number of students in the class, (4) the number of adults present in the classroom, and (5) other circumstances prevailing at the user site.

IMPLEMENTATION PROCEDURES

The program requires no special equipment or facilities. Because the product is transportable, or self-contained, no teacher training is necessary if each participating teacher becomes thoroughly familiar with the information presented in the two staff development manuals and teacher's manuals accompanying the student curriculum materials.

Personnel Required for Product Adoption and Implementation

Because of the program's small-group approach and emphasis on individual progress, each user classroom should have one teacher and at least one instructional assistant. The ideal situation is that both of these individuals be bilingual, but at least one of them should be. In cases of classrooms with no bilingual instructor, an arrangement may be worked out in which a bilingual teacher "rotates" or exchanges certain responsibilities with a monolingual English-speaking teacher.

Teachers must familiarize themselves with the theoretical background and implementation procedures included in the staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*; they must also read the teacher's manuals accompanying the curriculum materials.

ASSURANCES AND CLAIMS

Assurances

BOLAR, Grade 2 (including earlier versions designated as language development and Reading and adaptations of the materials by the SEDL Follow Through Program) has been used and tested in more than 90 classrooms in 5 States. Formative data obtained during this multiyear development process were used for program revision and refinement. These data provided no indication of sociological, psychological, or physical harm to pupils exposed to the materials.

BOLAR instructional materials—including Spanish oral language, English oral language, Spanish reading, and English reading—have been approved for statewide textbook adoption beginning in September 1975 by the State Board of Education of Texas. During the State textbook approval process, the materials are made available for critical review by both professional and special-interest groups. Testimony, solicited from these groups by the State Textbook Committee in open hearings, indicated that the products contained no materials considered to be biased toward any ethnic, sex, or cultural groups. As a result of testimony provided during the hearings, the committee requested that the publisher of the BOLAR materials perform several editorial changes to reduce the usage of regional idioms in some of the pupil Spanish reading books.

The BOLAR program has been field tested with predominately native Spanish-speaking migrant pupils with no direct interaction between program developers and program users. A preservice teacher-training session (approximately 3 days) is considered beneficial for teachers who are not experienced in Spanish-English instruction. The training may be provided by SEDL or by other bilingual educators who are familiar with the program's instructional methodology. Since completion of field testing in 1973, over 180 complete BOLAR curriculum packages have been purchased for classroom use. Over 30 others are using components of the BOLAR system. As the BOLAR materials represent the only grade-2 bilingual curriculum for language instruction approved for Texas textbook adoption beginning in 1975-76, the number of users is expected to at least quadruple during the next year.

Claims

Target pupils for the *BOLAR, Grade 2* instructional materials demonstrated significant performance gains in both Spanish and English reading skills (vocabulary and comprehension), as measured by the Inter-American Spanish reading test and cooperative primary reading test, respectively. In comparison to similar children with more traditional language instruction, the target pupils demonstrated significantly greater reading gains in both languages. The latter data, resulting from a tightly controlled covariance design, indicate that pupils taught with the BOLAR materials may be expected to maintain an accelerated rate of reading skills acquisition in both the Spanish and the English languages. Data from criterion-referenced mastery tests, designed for postinstructional determination of concepts acquisition, reveal that an average of more than 80 percent of the target pupils exhibited desired concept mastery outcomes. Higher performance levels were evidenced for Spanish instructional objectives. In response to the pupil attitude inventory, a measure of pupil affect toward the four BOLAR instructional components, an average of more than 80 percent of the field test pupils indicated positive attitudes toward their learning experience. Pupil reaction was more favorable toward the English and oral language classroom activities. Of the classroom teachers and aides responding to the user questionnaire, 83 percent expressed a desire to use the BOLAR materials the following school year.

The *BOLAR, Grade 2* instructional system is a product of the Southwest Educational Development Laboratory's multistage developmental process, in which educational products and practices are revised and refined to their final form based on extensive "in-the classroom" testing and practitioner feedback. Data on which product claims are based were obtained during field testing of the materials with predominately native Spanish-speaking children of migratory agricultural workers in south Texa[illegible]he field-test evaluation and teacher training were conduc[illegible] by persons independent of the program development staff. Some structural refinements to the program have been made since field testing was completed in 1973. For example, the four program components—Spanish Oral Language, English Oral Language, Spanish Reading, and English Reading—were separated into discrete packages rather than remaining a single package, and the number of mastery tests was reduced from 11 to 7. The educational content of the materials was not appreciably altered, making it unlikely that the recent product changes, made primarily for marketing purposes, would alter the evaluative evidence to a significant extent.

RD 110 032

BILINGUAL ORAL LANGUAGE AND READING (BOLAR), ENGLISH ORAL LANGUAGE, GRADE 2

A program which employs a modified version of the audiolingual approach to English-as-a-second-language instruction for learners in grade 2

Basic language patterns and vocabulary are based upon: (1) The findings of several research studies conducted to analyze the language patterns of Spanish-speaking kindergarten and 1st-grade children; (2) formative and summative feedback from design-, pilot-, and field-test sites throughout the United States (Texas, California, Idaho, Pennsylvania); and (3) a systematic comparative analysis of English and Spanish phonology, syntax, lexicon, and semantics.

The component employs a modified version of the audiolingual approach to English-as-a-second-language instruction, complemented by situational reinforcement and activities which encourage creative self-expression; the lesson objectives do not require set responses. Special attention is paid to phonology; this is specifically addressed in a supplemental publication, *English Pronunciation, Book 2*. Oral classroom exercises, accompanied by visuals, make use of the "minimal pair" approach to contrasting linguistic elements.

Two basic teacher's manuals, *Oral Language, Book 2* and *Oral Language, Book 3*, contain lessons focusing on elementary environmental information and specific content areas. The topics serve as a framework for teaching language; children acquire adequate language to discuss the topics without having to learn new concepts at the same time.

The teacher involves small groups of children in language activities, each of which is designed to teach specific language patterns. Drill exercises and repetition are used only until the basic structures are established; then students participate in more informal, though related, practice activities such as dialogs, games, poems, stories, songs, and rhymes. The lessons in book 4 are guided discussions of various topics which give children further opportunities to use sentence structures already learned in new contexts.

Two staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*, present both theoretical background and implementation guidelines. (Note: These manuals are applicable across all BOLAR components.)

SUBJECT AREA(S)

Basic conversational English language patterns are taught through a series of small-group activities. Children learn to talk about home, family, neighborhood, school, and other familiar topics in a nonthreatening setting, thereby gaining both the self-confidence and the language proficiency to begin to read and write English effectively and with understanding.

INTENDED USERS AND BENEFICIARIES

The component is designed primarily for native Spanish-speaking students who enter 2d grade with minimal English language proficiency. However, the activities can be adapted for use with other early elementary level learners for whom basic English instruction would be beneficial.

GOAL(S) OR PURPOSE(S)

The four basic goals of the English oral language component are to enable children: (1) To master basic English structures through a variety of drills and informal activities, (2) to use basic English structures in a variety of situations, (3) to develop oral language competence in English in order to be prepared for reading and writing, and (4) to master the English sounds which are not part of the home language.

PATTERNS OF USE

The lessons, and the activities within them, are sequential and cumulative.

ASSESSMENT PROVISIONS

The teacher assesses student progress by using the integration activities (evaluations) included at certain points in the teacher's manuals; these may be used as postinstructional assessments or for diagnostic instruments to determine initial placement. The teacher also administers criterion-referenced mastery tests designed primarily for postinstructional assessment. These tests, which are easily administered and scored, may also be used as diagnostic instruments to determine initial placement. One mastery test accompanies each of the teacher manuals, *Oral Language, Book 3*, and *Oral Language, Book 4*.

TIME REQUIREMENTS

The component is designed to be used for an average of 30 minutes each day for 1 year, an estimate that is very flexible in terms of daily scheduling. The actual amount of time spent in the component's small-group activities depends upon several factors. These include: (1) The language dominance of individual class members, (2) the range of developmental levels represented in the class, (3) the total number of students in the class, (4) the number of adults present in the classroom, and (5) other circumstances prevailing at the user site.

IMPLEMENTATION PROCEDURES

The component requires no special equipment or facilities. Because the product is transportable, or self-contained, no teacher training is necessary if each participating teacher becomes thoroughly familiar with the information presented in the two staff development manuals and the teacher's manuals accompanying the student curriculum materials.

Because of the component's small-group approach and emphasis on individual progress, each user classroom should have one teacher and at least one instructional assistant. These individuals must familiarize themselves with the theoretical background and implementation procedures included in the staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*; they must also read the teacher manuals carefully to become familiar with the language teaching strategies inherent in the component.

Teaching the component does not require bilingual ability. However, in classrooms including native Spanish-speaking children, at least one of the instructional personnel should have some Spanish proficiency to be able to understand the children and make simple explanations. When the component is used in conjunction with corresponding Spanish components, a bilingual instructor is necessary.

ASSURANCES AND CLAIMS

The *English Oral Language* component of the *BOLAR System for Grade 2* (including portions of earlier versions, designated as language development and reading, and adaptations of the materials by the SEDL Follow Through Program) has been used and tested in more than 90 classrooms in 5 States. Formative data obtained during this multiyear development process were used for program revision and refinement. These data provided no indication of sociological, psychological, or physical harm to pupils exposed to the materials.

BOLAR instructional materials—including the *English Oral Language* component—have been approved for statewide textbook adoption beginning in September 1975 by the State Board of Education of Texas. During the State textbook approval process, the materials are made available for critical review by both professional and special-interest groups. Testimony, solicited from these groups by the State Textbook Committee in open hearings, indicated that the products contained no materials considered to be biased toward any ethnic, sex, or cultural groups.

The BOLAR program has been field tested with predominately native Spanish-speaking migrant pupils with no direct interaction between program developers and program users. A 1-day preservice teacher training session is considered beneficial for teachers who are not experienced in Spanish-English instruction. The training may be provided by SEDL or by other persons who are familiar with the program's instructional methodology. Since completion of field testing in 1973, over 180 complete BOLAR curriculum packages have been purchased for classroom use. Over 30 others are using components of the BOLAR system. As the BOLAR materials represent the only grade-2 bilingual curriculum for language instruction approved for Texas textbook adoption beginning in 1975-76, the number of users is expected to at least quadruple during the next year.

BILINGUAL ORAL LANGUAGE AND READING (BOLAR), SPANISH ORAL LANGUAGE, GRADE 2

A program which employs a situational approach in which Spanish is used as a means for conveying ideas in meaningful contexts

The component employs a situational approach in which Spanish is used as a means for conveying ideas and information in meaningful contexts. At all times, the students must know and understand the meaning of the language being used; language must always be correlated with behavior. Puppets play an important role, especially in the introduction and demonstration of new structures. Lesson development follows these basic steps: (1) Observation of a dialog between the teacher and the puppets; (2) limited participation in the dialog by the children through dramatization; and (3) full participation, as the children conduct the dialog among themselves.

The teacher's manual, *Expresión Oral, Libro 3*, contains lessons based on the most fundamental patterns of Spanish—the elements with which native speakers of Spanish form and produce sentences. The program is sequenced from easy to difficult and from concrete to abstract. The lessons are designed to present diverse situations created to exemplify syntactical structures, patterns of intonation, and vocabulary that students should learn. Pronunciation is stressed in early lessons in order to take advantage of the young child's ability and willingness to mimic and reproduce sounds. Vocabulary items are introduced only within the sentence structures being taught; they are not singled out and taught separately (i.e., students learn only enough vocabulary to manipulate the structures).

Basic language patterns and vocabulary are based upon: (1) The findings of several research studies conducted to analyze the language patterns of Spanish-speaking kindergarten and 1st-grade children; (2) formative and summative feedback from design-, pilot-, and field-test sites throughout the United States (Texas, California, Idaho, Pennsylvania); and (3) systematic comparative analysis of English and Spanish phonology, syntax, and semantics.

Two staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*, present both theoretical background and implementation guidelines. (Note: These manuals are applicable across all bilingual oral language and reading (BOLAR) components.)

SUBJECT AREA(S)

Basic conversational Spanish language patterns are taught through a series of small-group activities. Lessons are presented as diverse situations created to exemplify specific language elements. The teacher encourages children to participate, first through dramatization in the form of dialogs with puppets and then through dialogs among themselves. This nonthreatening setting enables students to gain both the self-confidence and the language proficiency to read and write Spanish effectively and with understanding.

INTENDED USERS AND BENEFICIARIES

The component is intended for children whose native language is English or children who have little knowledge of Spanish.

GOAL(S) OR PURPOSE(S)

The four basic goals of the Spanish oral language component are to enable students: (1) To develop the ability to understand and reproduce Spanish language structures; (2) to develop the ability to understand and use basic Spanish language structures in communicative situations; (3) to develop understanding and appreciation of the culture, the customs, and the traditions of the Spanish-speaking population of the United States; and (4) to develop oral language competence in Spanish in order to be prepared for reading and writing.

PATTERNS OF USE

The lessons are sequential and cumulative.

ASSESSMENT PROVISIONS

The teacher assesses student progress by using the informal evaluations at the end of each lesson according to suggestions in the teacher's manuals. The teacher also administers a criterion-referenced mastery test designed primarily for postinstructional assessment. This test, which is easily administered and scored, may also be used as a diagnostic instrument to determine initial placement. One mastery test accompanies the teacher's manual.

TIME REQUIREMENTS

The component is designed to be used for an average of 30 minutes a day for 1 year, an estimate that is very flexible in terms of daily scheduling. The actual amount of time spent in the component's small-group activities depends upon several factors. These include: (1) The language dominance of individual class members, (2) the range of developmental levels represented in the class, (3) the total number of students in the class, (4) the number of adults present in the classroom, and (5) other circumstances prevailing at the user site.

IMPLEMENTATION PROCEDURES

The component requires no special equipment or facilities. Because the product is transportable, or self-contained, no teacher training is necessary if each participating teacher becomes thoroughly familiar with the information presented in the two staff development manuals and the teacher's manuals accompanying the student curriculum materials.

Because of the component's small-group approach and emphasis on individual progress, each user classroom should have one teacher and at least one instructional assistant. The ideal situation is that both of these individuals be bilingual; at least one of them should be. In cases of classrooms with no bilingual instructor, an arrangement may be worked out in which a bilingual teacher "rotates" or exchanges oral language responsibilities with a monolingual English-speaking teacher.

Teachers must familiarize themselves with the theoretical background and implementation procedures included in the Staff Development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*; they must also read the teacher's manuals accompanying each strand of the product.

ASSURANCES AND CLAIMS

The *Bilingual Oral Language and Reading, Spanish Oral Language, Grade 2* (including portions of earlier versions, designated as *Language Development and Reading*, and adaptations of the materials by the SEDL followthrough program) has been used and tested in more than 50 classrooms in 4 States. Formative data obtained during this multiyear development process were used for program revision and refinement. These data provided no indication of sociological, psychological, or physical harm to pupils exposed to the BOLAR materials.

BOLAR instructional materials—including the Spanish oral language component—have been approved for statewide textbook adoption beginning in September 1975 by the State Board of Education of Texas. During the State textbook approval process, the materials are made available for critical review by both professional and special interest groups. Testimony, solicited from these groups by the State textbook committee in open hearings, indicated that the products contained no materials considered to be biased toward any ethnic, sex, or cultural group.

The BOLAR program has been field tested with predominately native Spanish-speaking migrant pupils with no direct interaction between program developers and program users. A 1-day preservice teacher training session is considered beneficial for teachers who are not experienced in Spanish-English instruction. The training may be provided by SEDL or by other bilingual educators who are familiar with the program's instructional methodology. Since completion of field testing in 1973, more than 180 complete BOLAR curriculum packages have been purchased for classroom use. More than 30 others are using components of the BOLAR system. RD 110 034

BILINGUAL ORAL LANGUAGE AND READING (BOLAR), ENGLISH READING, GRADE 2

A product which makes use of the most relevant features of language experience: Sight reading and phonics for learners in grade 2

Bilingual Oral Language and Reading, English Reading, Grade 2, employs an eclectic approach which evolved as the result of: (1) Extensive research studies of the language patterns of bilingual children; (2) systematic comparative analysis of the phonology, syntax, lexicon, and semantics of both Spanish and English, and indepth analysis of decoding skills in both languages, from which evolved materials that minimize language interference and maximize positive language transfer in the reading process; and (3) formative and summative feedback from design, pilot, and field test sites throughout the United States (Texas, California, Idaho, Pennsylvania).

The product makes use of the most relevant features of language experience—sight reading and phonics. Language experience sharing takes place throughout the year because of its motivational nature and also because the teacher can incorporate both sight-word and phonic decoding strategies into the reading of children's dictated stories. A teacher's manual, *The Language Experience Approach to Reading*, contains information and guidelines for conducting language experience sessions.

Students participate in small-group reading activities in which the seven sight-word strategies (modeling, substituting, matching, framing, closing, dialoging, and composing) and phonic decoding skills are applied to the content of five student readers. Because pupils may encounter problems with some of the words and ideas in the readers, the accompanying teacher's manual, *Reading English, Book 3*, contains a story-by-story listing of the new words, along with probable means of word attack. Also listed are suggested comprehension questions and ideas for related compositions. Students are encouraged to read their books at a quick pace, with minimum teacher interference or checking. This unstructured approach evolves from the premise that reading skills develop primarily from the reading of connected materials; detailed, lengthy teacher instruction can prevent children from reading, so it is important to minimize such nonreading activity. The word-attack suggestions in the teacher's manual are to be used only with those children encountering difficulty with word recognition, comprehension, or fluency. The same unstructured approach is used when children read *The Yellow Bus*, a narrative containing 30 stories about the activities of one family. A teacher's manual bearing the same title contains probable word-attack skills, reinforcement activities, and evaluation procedures.

The product includes two student workbooks, *Basic Reading Skills, Book 3*, and *Basic Reading Skills, Book 4*, which are used concurrently with the two previously described strands. These workbooks introduce children to, and give children practice in, auditory recognition of long and short vowels and an orientation to the spelling patterns which produce these sounds. Other word elements dealt with are silent letters, initial and final consonants and blends, the function of "y" as a vowel, initial consonant blends, and initial digraphs.

Two staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*, present both theoretical background and implementation guidelines. (Note: These manuals are applicable across all BOLAR components.)

SUBJECT AREA(S)

Three interrelated strands comprise this 2d-grade English-reading product. Language experience sharing, with its motivational nature and opportunities for application of word-attack skills, is used concurrently with the other two strands throughout the year.

Children also apply sight-word and phonic decoding skills to printed materials with minimal teacher assistance. They are designed to be interesting and challenging. The phonics strand deals with vowel sounds and other word elements and provides the child with continuously increasing word-attack skills.

INTENDED USERS AND BENEFICIARIES

The product is designed primarily for native Spanish-speaking students with minimal English language proficiency, although it can be used very effectively with native English speakers.

GOAL(S) OR PURPOSE(S)

The purpose is to involve students in reading through a meaningful combination of approaches: (1) Language experience sharing for motivation and application of word-attack skills, (2) semi-independent reading of printed materials, and (3) phonics activities to expand decoding skills.

PATTERNS OF USE

The lessons and activities within each strand are sequential and cumulative; the three strands are taught concurrently and/or alternately.

ASSESSMENT PROVISIONS

The teacher assesses language experience and independent reading progress through informal measures suggested in the teacher's manuals. The phonics workbooks include periodic evaluation pages. The teacher also administers criterion-referenced mastery tests designed primarily for postinstructional assessment. These tests, which are easily administered and scored, may also be used as diagnostic instruments to determine initial placement. The product includes two comprehensive mastery tests.

TIME REQUIREMENTS

The product is designed to be used for an average of 30 minutes a day for 1 year, an estimate that is very flexible in terms of daily scheduling. The actual amount of time spent in the component's small-group activities depends upon several factors. These include: (1) The language dominance of individual class members, (2) the range of developmental levels represented in the class, (3) the total number of students in the class, (4) the number of adults present in the classroom, and (5) other circumstances prevailing at the user site.

IMPLEMENTATION PROCEDURES

The product requires no special equipment or facilities. Because the product is transportable, or self-contained, no teacher training is necessary if each participating teacher becomes thoroughly familiar with the information presented in the two staff development manuals and the teacher's manuals accompanying the student curriculum materials.

Personnel Required for Product Adoption and Implementation

Because of the product's small-group approach and emphasis on individual progress, each user classroom should have one teacher and at least one instructional assistant. These individuals must familiarize themselves with the theoretical background and implementation procedures included in the staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*; they must also read the teacher's manuals accompanying each strand of the product.

Teaching the product does not require bilingual ability. However, in classrooms including native Spanish-speaking children, at least one of the instructional personnel should have some Spanish proficiency to be able to understand the children and make simple explanations. When the product is used in conjunction with corresponding Spanish products, a bilingual instructor is necessary.

The program is designed to be self-contained or replicable. However, teacher reaction from demonstration sites indicates that Southwest Educational Development Laboratory (SEDL) consultant services are extremely helpful.

ASSURANCES AND CLAIMS

The English reading product of the BOLAR system for grade 2 (including portions of earlier versions, designated as language development and reading, and adaptations of the materials by the SEDL followthrough program) has been used and tested in more than 90 classrooms in 5 States. Formative data obtained during this multiyear development process were used for program revision and refinement. These data provided no indication of sociological, psychological, or physical harm to pupils exposed to the BOLAR materials.

BOLAR instructional materials—including the English reading product—have been approved for statewide textbook adoption beginning September 1975 by the State Board of Education of Texas. During the State textbook approval process, the materials are made available for critical review by both professional and special interest groups. Testimony, solicited from these groups by the State Textbook Committee in open hearings, indicated that the products contained no materials considered to be biased toward any ethnic, sex, or cultural groups.

The BOLAR program has been field tested with predominately native Spanish-speaking migrant pupils with no direct interaction between program developers and program users. A 1-day preservice teacher-training session is considered beneficial for teachers who are not experienced in Spanish-English instruction. The training may be provided by SEDL or by persons who are familiar with the program's instructional methodology. Since completion of field testing in 1973, more than 180 complete BOLAR curriculum packages have been purchased for classroom use. More than 30 others are using products of the BOLAR system. As the BOLAR materials represent the only grade 2 bilingual curriculum for language instruction approved for Texas textbook adoption beginning in 1975-76, the number of users is expected to at least quadruple during the next year.

BILINGUAL ORAL LANGUAGE AND READING (BOLAR), SPANISH READING, GRADE 2

A product which makes use of the most relevant features of both the language experience and the sound-to-symbol approaches to reading instruction in grade 2

The 2d-grade Spanish reading program employs an eclectic approach which evolved as the result of: (1) Extensive research studies of the language patterns of bilingual children; (2) systematic comparative analysis of the phonology, syntax, lexicon, and semantics of both Spanish and English and indepth analysis of decoding skills in both languages, from which evolved materials which minimize language interference and maximize positive language transfer in the reading process; (3) an analysis of 15 reading programs for the purpose of identifying methodological patterns in the teaching of reading in Spanish-speaking countries; (4) formative and summative feedback from design, pilot, and field test sites throughout the United States (Texas, California, Idaho, and Pennsylvania); and (5) interviews with bilingual children in Texas, California, and Pennsylvania to determine their interests. The topics in the Spanish readers were selected from a list prepared during these interviews.

The component makes use of the most relevant features of both the language experience and the phonic, sound-to-symbol, approaches to reading instruction. Language experience sharing takes place throughout the year because of its motivational nature and also because the teacher can incorporate phonic decoding skills into the reading of children's dictated stories. Children participate in small-group sessions during which they dictate and read stories about their own interests. A teacher's manual, *Lectura a Base de Experiencias*, contains information and guidelines for conducting language experience sessions. Another manual, *Composicion Oral y Escrita*, is designed to help children develop the capacity to relate their own experiences to verbal and written expression. This manual contains a series of lessons based on everyday experiences, problem-solving situations, and other topics intended to develop critical thinking and self-expression; it is intended for use throughout the year and ultimately results in original compositions written by students.

Because of the close correlation between the Spanish letters and their sounds, the phonic, sound-to-symbol, approach is used systematically throughout the Spanish reading program. The skills workbook, *Lectura y Escritura, Libro 3*, includes reading, writing, and comprehension exercises for diphthongs, consonants, and consonant clusters. A teacher's manual bearing the same title accompanies the student workbook. A series of five readers complements and reinforces the skills books. These readers are designed and written for children to read independently after specific skills buildups, allowing immediate application of learned skills to interesting and appropriate reading materials and providing incentive for further reading. Another skills book, *Lectura y Escritura, Libro 4*, presents a series of stories which form a narrative about the activities of one family; this book also includes reading and writing skills and comprehension exercises. A teacher's manual bearing the same title also accompanies this skills book. The 2d-grade series also includes a supplementary reader, *El Mago Maravillas*, which children read independently after finishing the other readers.

Two staff development manuals, *Theories of Language Learning and Reading* and *Bilingual Program Handbook*, present both theoretical background and implementation guidelines. (Note: These manuals are applicable across all BOLAR components.)

SUBJECT AREA(S)

The component is composed of two interrelated approaches to reading instruction: The language experience approach and the phonic, or sound-to-symbol approach. Language experience sharing, with its motivational nature and opportunities for application of word-attack skills, is used throughout the year concurrently with a program of phonic decoding skills, writing, and comprehension exercises. Children apply their skills to printed materials, or student readers, with minimum teacher assistance.

INTENDED USERS AND BENEFICIARIES

The component is designed for use with native Spanish-speaking students or with native English-speakers after prior oral language instruction.

RD 110 035

GOAL(S) OR PURPOSE(S)

The goals of this program are to involve children in reading through a meaningful combination of approaches: (1) Language experience sharing for motivation and application of word-attack skills, (2) semi-independent reading of printed materials, and (3) phonics activities to expand cumulative decoding skills.

PATTERNS OF USE

The lessons and activities within each strand are sequential and cumulative; the strands are taught concurrently and/or alternately.

ASSESSMENT PROVISIONS

The teacher assesses student progress in language experience and composition through informal measures suggested in the teacher's manuals; the skills books include an evaluation page at the end of each lesson. The teacher also administers criterion-referenced mastery tests designed primarily for postinstructional assessment. These tests, which are easily administered and scored, may also be used as diagnostic instruments to determine initial placement. One mastery test accompanies each of the student workbooks.

TIME REQUIREMENTS

The component is designed to be used for an average of 30 minutes per day for 1 year, an estimate that is very flexible in terms of daily scheduling. The actual amount of time spent in the component's small-group activities depends upon several factors. These include: (1) The language dominance of individual class members, (2) the range of developmental levels represented in the class, (3) the total number of students in the class, (4) the number of adults present in the classroom, and (5) other circumstances prevailing at the user site(s).

IMPLEMENTATION PROCEDURES

The component requires no special equipment or facilities. Because the product is transportable, or self-contained, no teacher training is necessary if each participating teacher becomes thoroughly familiar with the information presented in the two staff development manuals and the teacher's manuals accompanying the student curriculum materials.

ABE READINESS MATERIALS

Bilingual instructional packages to fill the void in materials available for teaching undereducated Mexican-American adults

The *ABE Readiness Materials*, which consists of three instructional packages, has been developed to help fill the void in instructional materials available for teaching the undereducated Mexican-American adult.

A bilingual approach has been undertaken to provide various entry levels for the Spanish-speaking adult. Instruction in the English readiness package is given primarily in Spanish, while Spanish and English are utilized for the consumer buying package. The job application package is taught in English only.

The English readiness package teaches the Spanish-speaking adult 30 common English words, the alphabet, and the English word sounds for the alphabet. The comparative buying package deals with necessary competencies required for family spending through use of shopping and money management techniques. The job application package contains materials and techniques for instructing the non-English Spanish speaker in the coping skills for securing employment.

SUBJECT AREA(S)

Adult education

The English readiness package consists of three interrelated teaching units which are directed at the Spanish-speaking adult who has no understanding of English.

The comparative buying package is designed to develop the necessary competencies required to plan family spending through utilization of shopping and money management techniques.

The job application package assists the Mexican-American in learning to complete an employment application, and provides him with information and techniques for creating a favorable impression during an interview.

INTENDED USERS AND BENEFICIARIES

The intended product users are teachers and teacher aides; the ultimate intended beneficiaries are non-English-speaking, Spanish-speaking adults.

GOAL(S) OR PURPOSE(S)

The objectives of this product are to motivate and to recruit hardcore students.

PATTERNS OF USE

The bilingual approach has been undertaken. The English readiness package is given primarily in Spanish; Spanish and English are used for the comparative buying package.

Each of the three packages utilizes various media.

1. The English readiness package consists of: Unit I (seven topics)—teacher flash cards, slides, and student worksheets; unit II—five tapes, lessons, and student workbooks; and unit III—six content lessons which provide pronunciation and sound discrimination drills.
2. The comparative buying package consists of filmstrips, tapes, and workbooks.
3. The job application package consists of five lessons, each supplemented by instructional tapes, slides, and a student handbook.

ASSESSMENT PROVISIONS

The packages include diagnostic tests, unit evaluations, postevaluations, and posttests simulating life situations.

TIME REQUIREMENTS

Requirements vary and are dependent upon entrance level of participants. Package 1 is geared to zero level English proficiency; package 2, to the intermediate level; and package 3 (the only package entirely in English), to advance proficiency.

IMPLEMENTATION PROCEDURES

The product is nonconsumable and amenable to extensive reuse. All packages in the program use various media including slide/tape presentations, lecture, slides, flash cards, and handbooks. The packages have been designed in three levels to provide an appropriate entry level for the Spanish-speaking adult. Clarity of communication is provided via the bilingual nature of the levels.

The product is complete and stands alone. Any equipment necessary is readily available in any school. No significant organizational changes are required to implement the packages. Maintenance requires only normal care.

Personnel Required for Product Adoption and Implementation

No consultants are required, nor is special training necessary. No adoption costs are intrinsic to the product, which can be used with large groups; the product stands complete.

ASSURANCES AND CLAIMS

This product was designed for use by teachers of undereducated non-English-speaking Spanish speakers and was tailored to include areas of particular interest and concern to the low-socioeconomic levels usually coexisting with non-English-speaking status. Special attention was paid to design of material appropriate to both men and women and to presenting lessons in Spanish and English.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Learning English package (3 units, tapes, flashcards, workbooks, evaluation test)	1 per setting	205.00	Reusable	
Comparative buying package (tapes, slides, workbooks, tests)	1 per setting	205.00	Reusable	
Job application package (tapes, slides, workbooks, tests)	1 per setting	205.00	Reusable	

Note: Packages may be purchased and used separately.

SYSTEMS APPROACH TO LESSON PLANNING PACKAGE

Teacher training materials for conversion of written objectives to lesson plans

The *Systems Approach to Lesson Planning Package* provides teachers with training on techniques for converting written objectives to lesson plans through utilization of the teaching systems matrix.

The matrix is a recordkeeping tool by which the teacher can record planned entry conditions, teaching procedures, and learner outcomes, as well as what actually happens. In this way, the teacher can decide what to do if the actual outcomes do not meet those that are planned.

SUBJECT AREA(S)

Teacher Training. Techniques for converting written objectives to lesson plans utilizing the teaching system matrix.

Lessons include:
- Lesson I—Introduction and Terminology
- Lesson II—The Teaching Systems Matrix
- Lesson III—Logical Contingency Relationships
- Lesson IV—Empirical Contingencies
- Lesson V—Troubleshooting
- Lesson VI—Adaptive and Corrective Strategies

INTENDED USERS AND BENEFICIARIES

The intended users are adult education teachers, elementary and secondary teachers and aides, school administrators, and university administrators. The beneficiaries are students of all ages.

GOAL(S) OR PURPOSE(S)

The major goal of this package is to provide training for teachers in conversion of written objectives to lesson plans.

PATTERNS OF USE

Specific activities include utilization of the learning system's terminology and parts of a teaching systems matrix, identification of planning statements which match or mismatch the actual event, and identification of probable sources of instructional problems and practices, using the matrix as a teaching tool to improve planning involvement in a simulated teaching situation to practice purposes for using the matrix subsystem.

ASSESSMENT PROVISIONS

A pretest determines the teacher's entry level, and a reaction form is included to be completed and mailed to SWCEL after the participants have actually used the systems approach in their own teaching environment.

TIME REQUIREMENTS

The learner time to complete instruction is approximately 1 day.

IMPLEMENTATION PROCEDURES

This product is nonconsumable and can be reused extensively. The product does not require a consultant from the laboratory and is self-instructional. The package involves slide/tape media and workbooks, and has been constructed to correspond to the language and reading ability of professional teachers. This product is, by its very nature, adaptable to certain local needs and constraints such as flexibility in number of participants to be trained, site for training, and extensive variety of types of existing programs to which the *Systems Approach to Lesson Planning* is adaptable.

Very few, if any, preexisting user constraints are involved in installation of this product. In addition, there are no organizational changes or maintenance requirements beyond those already required in a classroom with durable items.

The product is very adaptable and flexible to use in varied circumstances. Developers are not required for any stage of program installation or use. No auxiliary materials or services are required that are not present in any potential product-use site.

The two components—the series and materials for student use—are rented and sold separately because they are flexible and adaptable to use together or as stand-alone products.

The use and nature of the product is simple to understand; it is durable, and all component and auxiliary materials have been field tested and evaluated for use under varied circumstances before product rental was undertaken. Little, if any, organizational change would be required except that resulting from initial decisionmaking involved in rental of the product.

Community reactions were considered and evaluated in field testing. The product was found to work well with any potential users in the target group—the adult literate (or illiterate) Spanish-speaking, urban or rural population.

Summary Cost Information

Total installation and continuation costs depend upon the rental period and the number of adult learners for whom supplementary materials are purchased.

Personnel Required for Product Adoption and Implementation

A program coordinator would be required and television station services can be enlisted on a community-service basis. Neither consultants nor training is required; however, some support staff time might be necessary depending on the installer's goals and size of the target group to be reached.

ASSURANCES AND CLAIMS

The product is unique in itself since it uses a particular system to train teachers and others to convert behavioral objectives to actual lesson plans and evaluate the success of the conversion.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Cost and Rate	Source if Different from Distributor
Package of slide/tapes and 30 workbooks	1 package for 30 participants	199.00; 2.00 for replacement of workbooks	Reusable; workbooks consumable

EMPLEEN INGLÉS

A series of 31 films designed to teach English to Spanish-speaking adults

The *Empleen Inglés* series consists of 30 half-hour films which are designed to teach English to non-English speakers. The films have been developed to achieve specific linguistic and cultural relevance, and each may be used as a complete instructional unit. The films emphasize practical applications of oral English language ability in completing application forms, comprehension of weights and measures, counting money, telling time, reading traffic signs, oral communication in grocery shopping and visiting a doctor's office or medical clinic, and communicating with the child's teacher.

The films, designed to be shown on television, enable the student to learn at home without the presence of a teacher. The adult student can watch a film, recognize the situation, and say, "That's me." The series deals with such topics as consumer education, the handling of tools, home nursing care, personal hygiene, and parent-child relationships.

SUBJECT AREA(S)

Adult basic education is the subject area.

This series consists of 30 half-hour films or video tapes which utilize true-to-life situations.

INTENDED USERS AND BENEFICIARIES

The intended product users are adult basic education programers, migrant camp directors, parish priests, and union leaders. The product may be used by any organization or program administrator desiring to institute or strengthen adult education classes.

The ultimate product users are adult Spanish speakers—rural stationary, rural migrant, urban Mexican-American, Puerto Rican, Cuban, or other Spanish-speaking individuals or community study groups in low socioeconomic groups who are not reached by conventional educational methods.

GOAL(S) OR PURPOSE(S)

The major goal of this product is to teach English to the Spanish-speaking adult in any of various learning settings, using an innovative instructional scheme.

PATTERNS OF USE

There are 30 video programs based on innovative instructional features such as rhythmic voice patterns, musical effects, choreography, cartoon effects, realistic characters, and animation in a bilingual language setting such as Spanish and English. Thirty written lessons, "Empleen Inglés, Materiales Para Estudiar en Casa," supplement the series. Although the films and written materials are correlated, they may be used separately. As there are frequently English-speaking children in the home, materials are designed at the primary level in order that these children might assist in instruction. While the programs were designed to use local telecasting facilities as a means of reaching the adult non-English speaker at home, it can also be used in movie form in a classroom setting.

ASSESSMENT PROVISIONS

A complete and reliable measuring instrument reflecting the content components and objectives of the program was designed to ascertain the English language oral proficiency of Spanish-speaking Americans. This test instrument consists of six parts, with particular reference to three attitudinal factors and three linguistic variables. The instrument is bilingual in nature, incorporating Spanish in the instructions and Spanish and English in the content. The linguistic variables included in the instrument are English comprehension, English usage, and English vocabulary. The attitudinal variables are attitudes toward English usage, attitudes toward program characters and situations, and attitudes toward other features of the programs such as dancing, culture, and eating. The instrument can be used as a pretest and posttest instrument relative to 30 paper-and-pencil lessons and/or with the video-field-testing instrument relative to content in the *Empleen Inglés* video programs.

TIME REQUIREMENTS

The video programs are consecutive and can be presented daily or on a distributed-time base (every other day for three lessons weekly). The distributed time arrangement presents unique advantages in terms of feasibility for telecasting, given the programing time restraints prevalent in most areas.

IMPLEMENTATION PROCEDURES

This audiovisual material is available on a rental basis and has been evaluated as appropriate, economical, and comprehensible for the group to which they are directed. Lessons can be presented to large target audiences in their homes by telecasting or on film in a classroom setting. The paper-and-pencil materials are deliberately designed so that children in the home might help instruct the non-English-speaking adults in the home.

The product is very adaptable and flexible for use in varied circumstances. Developers are not required for any stage of program installation or use. No auxiliary materials or services are required that are not present in any potential product-use site.

The two components—the series and materials for student use—are rented and sold separately for the very reason that they are flexible and adaptable to use together or as stand-alone products.

The use and nature of the product are very simple to understand and use; it is durable, and all component and auxiliary materials have been field tested and evaluated for use under varied circumstances before product rental was undertaken. Few, if any, organizational changes would be required except those resulting from initial decisionmaking involved in rental of the product.

Community reactions were considered and evaluated in field testing. This product was determined to work well with any potential users in the target group—the adult literate (or illiterate) Spanish-speaking urban or rural population.

Summary Cost Information

Total installation and continuation costs depend upon the rental period and the number of adult learners for whom supplementary materials are purchased.

Personnel Required for Product Adoption and Implementation

A program coordinator would be required. Television station services can be enlisted on a community-service basis. Consultants or training are not required; however, some support staff time might be necessary, depending on the installer's goals and size of the target group to be reached.

ASSURANCES AND CLAIMS

In the final analysis, it has been unequivocably concluded that the *Empleen Inglés* video program and paper-and-pencil lessons produce dramatic and significant gains in English comprehension, English usage, and English vocabulary. It has also been concluded that using a combination of the program's video and paper-and-pencil lessons produces greater learning effects than the use of a single-instructional medium (video or paper-and-pencil lessons). The *Empleen Inglés* video series may be used as a separate instructional medium; however, greater gains can be achieved when the paper-and-pencil lessons are used as a supplementary and reinforcement medium.

The field testing results revealed that the target populations in the study perceive the video program characters, situations, choreography, and other entertainment features in a favorable light. While technical observers and educators may provide suggestions for further improvisation, negative attitudes toward the video programs appear relatively absent among the participants in the study conducted.

The findings in the field testing do not imply that complete fluency in oral English communication has been achieved by the two instructional programs. It is conceivable that 30 video programs and paper-and-pencil lessons can produce this ultimate effect. However, based on the language content provided in the programs and measured by specifically designed test instruments, it can be concluded that the 30 program exposures are dramatically effective in oral English development.

PERFORMANCE OBJECTIVES PACKAGE

A product developed to provide teachers with a tool by which they can determine what their adult students want to learn

The *Performance Objectives Package* was developed to provide teachers with a tool by which they can determine what they want the student to learn. The use of performance objectives defines the behaviors the student will demonstrate after learning the material and how they will be evaluated.

The package is especially designed to enable adult education teachers to apply performance objectives to their teaching. Performance objectives have two major advantages. First, the student knows exactly what must be done to meet the teacher's expectations. Secondly, the teacher is able to pinpoint what overt behavior is expected of the student and what the student must know before meeting a particular objective. In this way, the teacher can determine whether instructional goals have been reached.

SUBJECT AREA(S)

Teacher education: Performance objectives as a teaching tool.

The package contains slide/tape presentations and a workbook. Six lessons, as well as a pretest and posttest, are included in the workbook which outlines goals and objectives, the instructional program, the three domains (cognitive, affective, and psychomotor), entering behaviors, components of a behavioral objective, and how to write performance objectives.

INTENDED USERS AND BENEFICIARIES

The intended users are adult education teachers, and the ultimate product beneficiaries are students in adult education classes.

GOAL(S) OR PURPOSE(S)

The purpose of the *Performance Objectives Package* is to provide teachers with a tool by which they can determine what they want a student to learn. The use of performance objectives defines the behaviors the student will demonstrate after learning the material and how it will be evaluated. The overall objective is to enable adult education teachers to apply performance objectives to their teaching.

PATTERNS OF USE

Teachers with no previous knowledge or experience in performance objectives move through six planned lessons to the point at which the ability to write performance objectives is achieved. At the completion of the six lessons, teachers write and exchange performance objectives and offer an evaluation and criticism of each other's work.

ASSESSMENT PROVISIONS

Prior to the beginning of the six lessons, the teacher is given a diagnostic pretest. At the completion of the lessons, a posttest is administered to determine knowledge of the materials.

TIME REQUIREMENTS

Learner time required to complete instruction is 4 hours.

IMPLEMENTATION PROCEDURES

The product is not consumable and can be reused extensively. It utilizes slides with accompanying tapes and workbooks geared to the abilities of the adult teacher. The product can be used on a stand-alone basis and is designed for flexibility and adaptability to a multitude of learning areas.

The developer is aware of no preexisting or other consumer restraints which limit the use of this product. Only minimal, temporary organizational or other changes are required for the period of instruction and the training of the implementer.

Summary Cost Information

Total installation depends upon the number of program participants since a workbook is required for each. Average cost would also depend upon the number of individuals to be trained.

ASSURANCES AND CLAIMS

All SWCEL products were developed to meet the needs of minority populations. The unique education intervention made necessary by the special requirements of minority target groups was the purpose for the founding of the laboratory.

While many performance objectives programs offer instruction mainly in the cognitive (knowledge) domain, SWCEL's packages also emphasize their use in the affective (emotional) and psychomotor (physical skills) domain since the three are closely related.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Package containing slide/tapes and workbooks	1 package for 30 participants	139.00; 3.00 for replacement of workbooks	Reusable; workbooks consumable

RD 110 040

BILINGUAL BALANCE TESTS

A set of comprehensive tests to measure the Spanish and English language skills of students, grades 1-7, coming from homes where only Spanish is spoken

Bilingual Balance Tests introduces a new element into the testing of students whose home or "native" speech differs from standard English. The test battery, for use with pupils in the elementary grades, includes tests of Spanish-speaking children's total language proficiency in both Spanish and English. Also under development are tests of teachers' attitudes toward nonstandard English or Spanish. Related research is investigating whether such teachers' attitudes toward the nonstandard speech of their pupils are related to pupil achievement. Pupils' attitudes toward nonstandard English will also be measured.

The pupil achievement tests measure vocabulary, grammar, and language production in both Spanish and English, making use of verbal (written or tape-recorded) and pictorial stimuli. A brief manual explains the purpose of the student test battery and provides directions for its administration and interpretation.

SUBJECT AREA(S)

Subject areas include evaluation, language arts, and bilingual education for children in grades 1 through 7.

INTENDED USERS AND BENEFICIARIES

The tests are for use with Spanish-speaking students from a variety of backgrounds in grades 1-7 and their teachers. The present battery has been used in grades 1, 3, 5, and 7. The tests are suitable for use in bilingual education (where instruction is given in Spanish as well as English) and conventional programs.

GOAL(S) OR PURPOSE(S)

Bilingual education is now recognized as a national priority. However, the need for teacher awareness of the total language competencies of Spanish-speaking children is not always recognized. Use of the pupil achievement tests and the teacher and pupil attitude tests is expected to improve teachers' awareness of their Spanish-speaking students' total language competence, the effectiveness of those teachers, and, consequently, the achievement in standard English of their Spanish-speaking students.

PATTERNS OF USE

The pupil achievement tests may be used in conjunction with regular classes. For diagnostic purposes, it is recommended that they be used early in the year. Administration in successive years will provide data on pupil progress toward linguistic balance; i.e., proficiency in standard English as well as Spanish.

ASSESSMENT PROVISIONS

The entire package is an assessment package. The teacher's manual contains preliminary data on validity and reliability for the tests.

TIME REQUIREMENTS

Vocabulary and multiple-choice grammar tests (group administration), 25 minutes each; language production test (administered individually), 30 minutes; and attitude tests (group administration), 40 minutes each are the time requirements.

IMPLEMENTATION PROCEDURES

The teacher's manual provides a context for the tests, explains their objectives, and gives directions for their use.

ASSURANCES AND CLAIMS

Field testing of earlier versions of the tests was carried out by SCRDT personnel with approximately 700 Spanish-speaking students in 5 locations. Experience indicates that the tests, when accompanied with a teacher's manual, are self-contained and transportable. The production tests can be administered only by Spanish-speaking teachers. No evidence of social bias or harmfulness appeared during the field tests. Final data on validity and reliability on the pupil achievement tests will appear in the teacher's manual.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Pupil achievement tests	1 set per student	To be determined (minimal)	With each administration; may be duplicated on site	To be determined
Teacher's manual	1 per teacher	To be determined (minimal)	Reusable	To be determined

BIDIALECTAL BALANCE TESTS

A set of comprehensive tests to measure the language skills of students grades 1-6 coming from homes where standard English is not spoken

Bidialectal Balance Tests introduces a new element into the testing of students whose home or "native" speech differs from standard English. The test battery, for use with pupils in the elementary grades, includes tests of black children's total language proficiency. Also under development are tests of teachers' attitudes toward nonstandard English. Related research is investigating whether such teachers' attitudes toward the nonstandard speech of their pupils are related to pupil achievement. Pupils' attitudes toward nonstandard English will also be measured.

The pupil achievement tests measure discrimination, repetition, and language production in both "black standard" and "black nonstandard" English, making use of verbal (written or tape-recorded) and pictorial stimuli. A brief manual explains the purpose of the student test battery and provides directions for its administration and interpretation.

SUBJECT AREA(S)

Subject areas involve evaluation, language arts, and bidialectical education for students in grades 1-6.

INTENDED USERS AND BENEFICIARIES

The tests are for use with black students from a variety of backgrounds in grades 1-6 and their teachers. The present battery has been used in grades 1, 3, and 6.

GOAL(S) OR PURPOSE(S)

Consideration of the role of language varieties other than white standard English in education is now recognized as a national priority. The need for teacher awareness of the total language competencies of black children is not always recognized. Use of the pupil achievement tests and the teacher and pupil aptitude tests is expected to improve teachers' awareness of their black students' total language competence, the effectiveness of those teachers, and, consequently, the achievement in standard English of their black students.

PATTERNS OF USE

The pupil achievement tests may be used in conjunction with regular classes. For diagnostic purposes, it is recommended that they be used early in the year. Administration in successive years will provide data on pupil progress toward linguistic balance, i.e., proficiency in standard as well as nonstandard (black) English.

ASSESSMENT PROVISIONS

The entire package is an assessment package. The teacher's manual contains preliminary data on validity and reliability for the tests.

TIME REQUIREMENTS

Discrimination test (group administration), 25 minutes; and repetition and production tests (administered individually), 35 minutes each

IMPLEMENTATION PROCEDURES

The teacher's manual provides a context for the tests, explains their objectives, and gives directions for their use.

ASSURANCES AND CLAIMS

Field testing of earlier versions of the test was carried out by black research assistants and consultants with approximately 550 black students in 2 locations. Experience indicates that the tests, when accompanied with a teacher's manual, are self-contained and transportable. Since the stimuli are recorded, whites could administer the tests, but administration of the nonstandard black English production test by whites is not recommended. No evidence of social bias or harmfulness appeared during the field tests. Final data on validity and reliability of the pupil achievement tests will appear in the teacher's manual.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Pupil achievement tests	1 set per student	To be determined (minimal)	With each administration; may be duplicated on site	To be determined
Teacher's manual	1 per teacher	To be determined (minimal)	Reusable	To be determined

SOBER-ESPAÑOL

An objectives-based system to assess reading achievement in Spanish, for students in grades K-3

SOBER-Español is an objectives-based system to assess reading achievement in Spanish. SOBER is an acronym for System for Objectives-Based Evaluation in Reading. The system has been designed as a tool to measure students' progress in the English-Spanish bilingual programs. The basic rationale of *SOBER-Español* is that teachers, evaluators, program directors, and coordinators should be able to select assessment instruments to meet specific objectives of the local curriculum.

The system developers have researched the areas of basic reading skills, comprehension, and creative expression in Spanish; they have also analyzed English and Spanish reading skills for common and differing areas. The general areas of the reading domains in Spanish have been identified and classified.

The system contains criterion-referenced objectives and test items for grades K-3. The process of writing objectives and test items for grades 4-6 is now underway. When completed, the system will have the capability of generating either comprehensive assessment instruments or short tests to measure Spanish reading achievement in grades K-12.

SOBER-Español tests can be used for pretesting, for posttesting, and as an interim measure at various points during an instructional program. For each testing period, 10 to 40 objectives are selected from a comprehensive collection of all reading objectives. A test is then constructed, "tailor-made" to the specified objectives. The publisher provides three test items for each objective, prepares test booklets, and sends the customized tests and examiner's instructions to the schools. Scoring provides three types of information: Individual student reports, group results, and a distribution showing which objectives the students have mastered and on which they have not mastered.

SUBJECT AREA(S)

Subject areas include evaluation, Spanish, language arts, and bilingual education.

INTENDED USERS AND BENEFICIARIES

Teachers and administrative personnel at the school, district, State, regional, and Federal levels responsible for decisions concerning resource allocation, classroom management, curriculum planning, and instructional program evaluation in the area of bilingual education are the intended users.

Students of all reading abilities in grades K-12, Spanish-English bilingual programs are the ultimate users and beneficiaries of *SOBER-Español*.

GOAL(S) OR PURPOSE(S)

The purpose of the *SOBER-Español* system is to provide assessment instruments relevant to local (or other aggregate) reading programs in order to generate information needed to make decisions concerning resource allocation, classroom management, curriculum planning, and program evaluation and improvement.

PATTERNS OF USE

SOBER-Español is used for pretesting, posttesting, and interim testing; this could be for programs varying from a short teaching unit (1 month) to a 1-year program. It will be used in a variety of bilingual (English-Spanish) programs.

ASSESSMENT PROVISIONS

SOBER is an assessment system.

TIME REQUIREMENTS

Time requirements vary depending on the selected pattern of use; students spend from 20 minutes to a maximum of 15 hours per year using SOBER tests. Administration (proctor or teacher) time is approximately the same as student time. Administrator (decisionmaking) time will vary with each user.

IMPLEMENTATION PROCEDURES

As an optional, special service, scoring can be provided by the publisher.

ASSURANCES AND CLAIMS

As in any testing situation, extreme pressure to perform well can cause mental anguish in some students. The test selector is advised as a normal part of the selection procedure, however, to select objectives at an appropriate level of difficulty. The flexibility inherent in SOBER makes it possible to avoid items of extreme difficulty, something that cannot be controlled in traditional achievement tests. This same flexibility—user control of test content—provides assurance of the appropriateness of test content. Technical accuracy is assured by a thorough development and review process.

Reading passages in SOBER were developed with the intent of avoiding stereotyped roles of people (e.g., on the basis of age, sex, race, or religion). Reading passages and test items have been written and reviewed by bilingual educators who are representative of the following ethnic orientations: Honduran, Mexican, Cuban, Chilean, and Puerto Rican. To the best of the developer's knowledge, there is no social bias in any of the content.

Administration of SOBER tests is completely explained in a user's guide as well as in the administrator's copy of each test. No difficulties in test administration have been encountered in the field. Printing, delivery, and scoring of tests are all handled by Science Research Associates, Inc., a well-known and respected educational publisher. No problems of transportability are envisioned with SOBER.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars*	Replacement Rate and Cost	Source if Different from Distributor
Student test booklet:				
a. Custom tests	1 per student	Average .60 per student**	Grades K-2: Replace with each use; grades 3-12: Reusable when testing same objectives—then, replace approx. every 4th use	
b. Catalog tests (predetermined content)	1 per student	Average .45 per student** (minimum order 12.50)	Replace approx. every 4th use	
Answer sheets	1 per student	Approx. .01 per student****	Consumable	
Catalog of objectives	1 per 25 students	3.25***	Reusable	
Guide to SOBER-Español	1 per 25 students	.64***	Replace approx. every 4th use	
Examiner's manual	1 per 25 students	.64***	Grades K-2: Replace each testing; grades 3-12: Replace approx. every 4th use	
Supplemental items:				
Machine scoring and reporting	1 per student	Average, .75 per student **		

*All prices and other information in this section were estimated on the basis of an English language system produced by the CSE.

**Varies with number of students and/or objectives tested.

BLACK DIALECTS AND READING

A book for teachers of black children to improve the effectiveness of language and reading instruction

This book offers direction for the teacher who wants to know what can be done to improve the effectiveness of language and reading instruction. Part 1 focuses on the issues in teaching black children to read and provides the teacher with an orientation to some of the specific problems in the field such as the question of the existence and nature of black dialects, whether black English speakers should be taught standard English, and what teachers need to know to be effective in the classroom which includes dialect speakers. Diagnostic tools are described in part 2 so that the teacher can identify the language base on which to build individual programs. Articles in part 3 suggest classroom strategies for teaching oral standard English to nonstandard speakers. Part 4 provides materials which guide teachers in assisting dialect speakers in their special problems with correspondence between spoken forms and written symbols in beginning reading. Part 5 contains the edited transcripts of the proceedings from a conference, which provide a framework for understanding the questions that the English of blacks raises in the teaching of reading. Two special resources for teachers, including an annotated bibliography of materials on language, dialects, and reading, comprise part 6.

SUBJECT AREA(S)

Beginning reading, language experience approach, language handicaps, Negro dialects, nonstandard dialects, oral English, psycholinguistics, reading instruction, reading materials, reading processes, reading skills, and Tenl.

INTENDED USERS AND BENEFICIARIES

The intended users of this book are teachers, especially those teaching black children; college professors; and curriculum coordinators.

DIALECTS AND DIALECT LEARNING

A self-contained inservice program for elementary and secondary schoolteachers aimed toward teacher understanding of nonstandard dialects

Dialects and Dialect Learning is a self-contained inservice program for elementary and secondary teachers to enhance teacher understanding of the major nonstandard dialects in America. It provides information about dialects in general, the phonetics of American English, and features of nonstandard usage which commonly occur in American speech.

Dialects and Dialect Learning provides basic information and skills both for teachers who wish to modify their procedures in teaching standard English usage and for teachers who merely wish to understand more fully this sensitive and important topic. Much of the program focuses on enlarging the teacher's understanding of linguistics and of language as a social medium. The ultimate objective of this program and its companion program, *Learning a Standard English*, is to prepare teachers to individualize instruction in dialects and usage and help youngsters acquire control of major features of the standard dialect of their region, features they can use or not use—according to the dialects of given situations.

SUBJECT AREA(S)

Four self-instructional units comprise the programed course for the instruction of elementary and secondary teachers in understanding the major nonstandard dialects in America.

The units include: a program of basic information on American regional and social dialects and problems associated with dialect learning, a program for learning to record speech sounds in broad phonetic transcription, a program describing some major features of nonstandard dialects, and a component of dialects and dialect learning which includes pro-con arguments on the issue of giving a nonstandard speaker skill in speaking in the standard dialect of the region.

INTENDED USERS AND BENEFICIARIES

Dialects and Dialect Learning is designed for elementary and secondary teachers and may be used with college undergraduates preparing to teach.

The immediate beneficiaries are teachers who will profit from a new or enlarged understanding of the major nonstandard dialects in America.

The ultimate beneficiaries are elementary and secondary students who will be able to profit from individualized instruction in acquiring control of major features of the standard dialect of their region, features that they will be able to use or not use—according to the dictates of given situations.

GOAL(S) OR PURPOSE(S)

The purpose of this self-contained inservice program is to help elementary and secondary teachers develop abilities: (1) to answer questions relating to 10 critical concepts about American dialects, (2) to write broad phonetic transcriptions of tape-recorded speech samples, (3) to categorize and record nonstandard features occurring in the relatively formal speech of children and youth, and (4) to specify and defend their decision regarding whether to teach a standard dialect to nonstandard speakers.

PATTERNS OF USE

Dialects and Dialect Learning is a self-contained package designed for both group study and self-instruction with activities that are sequential and cumulative. (This package is the first in a series of three. The next two are entitled *Learning a Standard English* and *Teaching Writing to Speakers of Nonstandard Dialects*.) The suggested pattern for group-study usage is a series of 10 2-hour sessions at which time participants work together, with intervening self-study. The leader for group study of this program is best described as an instructional manager. This person does not teach in the usual sense of the term, but instead arranges situations so that others may learn as effectively as possible with the materials supplied. The instruction program includes a complete apparatus for self-instruction.

ASSESSMENT PROVISIONS

The general format of the program materials is ASSESS—LEARN—ASSESS Before beginning the program, students take a test. If they obtain the criterion for a unit, they don't have to take the unit work; they can skip the unit and go to the next. Within most of the units, there are frequent "check tests" by which students determine whether they are actually learning the material. At the end of each unit there is also a posttest which will allow students to compare progress from pretest to posttest. Included are evaluation sheets for each unit to be filled out by the student upon completion of that unit. Various tests and evaluation sheets are mailed to the developer or given to the group leader at specified intervals.

TIME REQUIREMENTS

Approximately 20 to 30 hours are required to complete the program, either on a group-study or individual self-instruction basis.

IMPLEMENTATION PROCEDURES

Dialects and Dialect Learning is a self-contained instructional package designed for either self-instruction or group study. It is a companion program to *Learning a Standard English*, an individualized programed course which instructs teachers, K-14, in a classroom management system for individualizing the teaching of standard English to nonstandard speakers. The ultimate objective of the two programs is to prepare teachers to individualize instruction in dialects and usage and to help youngsters acquire control of major features of the standard dialect of their region, features they can use or not use, according to the dictates of situations.

ASSURANCES AND CLAIMS

Assurances

There is no information which suggests that this program is harmful or socially unfair. *Dialects and Dialect Learning* has been prepared with the assistance of consultants, teachers, and children. The program was tested by the developer with the assistance of linguists at the University of Minnesota and the Center for Applied Linguistics in Washington, D.C.

Claims

Prior to instruction, the sample of teachers at three sites involved in the field test of the *Dialects and Dialect Learning* materials tended not to have a knowledge base and were unable to exhibit the requisite skills presented in the program. As a result of the instruction, the teachers made large, significant gains in the amount of knowledge they had acquired and the skills they could exhibit.

With the exception of "About Dialects," the gain scores on the tests were approximately equal to the pretest scores. This indicates that the teachers were able to identify and classify approximately twice as many of the nonstandard speech patterns of children after completing the programed instruction materials as they were able to before receiving instruction. These gains were significant at the .001 level.

MATERIALS AND EQUIPMENT

ANALYZING CHILDREN'S BOOKS WITH A CHICANO PERSPECTIVE (PART OF THE FLEXIBLE LEARNING SYSTEM)

*A unit to prepare teachers of Chicano children ages 4-8
to foster the self- and community-concept of the
Chicano child*

This unit is intended to prepare teachers of Chicano children ages 4-8 to analyze and evaluate the texts of children's literature in a way which will enable the teacher to recognize the cultural dimensions of the texts, and to select them for classroom use in a manner which will "minimize derogatory stereotypes" and which will "support, maintain, and develop the young Chicano's self-concept."

The unit assumes on the basis of research that one result from this unit will be that the teachers of young Chicanos will expand their knowledge of the Chicano experience. As a result, they will be more able and more likely to select reading matter for young Chicanos which will expand the children's interest in reading as an activity.

The guide is printed in two sections; it contains an explanation of guidelines, presentation of examples, question-and-answer series, and an ongoing evaluation process in which teachers compare their responses concerning specific examples with the unit's suggested responses. Sections of the unit examine such areas of Chicano-oriented texts as: Generalizations and simplifications, demeaning statements, ethnic stereotypes, inappropriate language, factual error, and misleading information.

SUBJECT AREA(S)

Bicultural teacher training is the subject area.

INTENDED USERS AND BENEFICIARIES

The intended users are teachers and teaching assistants of Chicano children ages 4-8. The intended beneficiaries are those teachers and their students.

GOAL(S) OR PURPOSE(S)

The goals of this unit are to instruct teachers of young Chicanos on the potential damage to their students of implicitly and/or unintentionally biased texts and to educate those teachers in the analysis of texts for young children in such a way that they can encourage healthy self-concepts and development in their students. The guidelines set down by the authors can be applied to any group of minority children, although the specific examples used by the authors would have to change to relate to the specific ethnic group being taught.

PATTERNS OF USE

The two levels, the dominant sections, of this guide are sequential and cumulative. Within each of the levels, the guide is cumulative but not necessarily sequential.

ASSESSMENT PROVISIONS

Since the guide is structured on the basis of learner activity and involvement and since the authors provide series of questions with their own suggested answers for comparison with those of the learner, there is a self-test progression throughout the guide.

TIME REQUIREMENTS

Time requirements are 6-8 weeks of instruction for teachers, or 8-10 hours; a 2-day training workshop is required of trainers.

ASSURANCES AND CLAIMS

The unit was field tested in the cities of Stockton and Los Angeles, California, with 19 teachers and teaching assistants. Data showed significant knowledge gains with a pretest/posttest design on three of four subtests.

SELECTING CHILDREN'S BOOKS WITH A BLACK PERSPECTIVE (PART OF THE FLEXIBLE LEARNING SYSTEM)

A unit to prepare teachers of black children, K-4 to choose texts appropriate to the black experience

This learner's unit is designed for use by teachers and teaching assistants of children from preschool through 3d grade. The unit's particular emphasis, as the title indicates, is to help such teachers learn to analyze books as a means of choosing appropriate materials about the black experience for preschool and early primary children.

The pilosophy behind this unit is that most children's literature used in the early grades does not accurately reflect the black experience in America. The unit holds that the forced exposure of black children to literature that is inadequate and incorrect to their culture encourages a dislike of themselves and a disinterest in, or a dislike for, the formal education process. Finally, the unit suggests that by educating teachers to an understanding of this situation and instructing them in literary analysis with these problems in mind, it will become possible for teachers themselves to understand the importance of judging and selecting books for young children which do include an accurate representation of the black experience.

The unit is constructed in three lessons. The first focuses on illustrations in children's books. The second provides background for analyzing the verbal parts of children's books using a black perspective. The third focuses on analyzing the historical accuracy of both the verbal and the pictorial content of children's books. All three lessons include evaluation forms and instructions, articles, or class projects which relate to the material covered.

SUBJECT AREA(S)

Literary analysis of children's books with a black perspective.

INTENDED USERS AND BENEFICIARIES

The intended users of this learner's unit are teachers and teaching assistants of preschool through 3d-grade children. The intended beneficiaries are these teachers and their students.

GOAL(S) OR PURPOSE(S)

To instruct teachers and teaching assistants on the need to understand children's literature from the point of view of minority children—particularly, in the instance of this unit, Afro-American children—and how to select books for use with their students which will maximize the development of healthy self-concepts in the children.

PATTERNS OF USE

The learner's guide is cumulative and sequential.

ASSESSMENT PROVISIONS

Since this is an activity-oriented unit, there is constant need and opportunity for self-evaluation. Exercises and evaluation forms occur frequently in the unit for this purpose. Since this unit is designed for use with an instructor, evaluation is a part of the instructor's ongoing activity.

TIME REQUIREMENTS

Approximately 42 hours are required.

RD 110 047

CONTENT ANALYSIS OF TEXTBOOKS FOR BLACK STUDENTS, GRADES 1-3

A self-instructional guide for teachers who wish to identify cultural bias in school materials

Considerable attention has been given in recent years to the presentation of black Americans in textbooks in the Nation's schools. Articles dealing with bias in textbooks are easy to find in the commercial and professional press. Everyone seems to agree that textbooks should give black Americans their share of space and should present black people as an important part of the American heritage and community. However, relatively few published textbooks actually do this. With all the hue and cry, textbooks have not changed much with respect to their treatment of black citizens.

When textbooks are unsatisfactory, it is necessary to supplement them with other materials in order to insure an adequate education for the students who use them. *Content Analysis of Textbooks for Black Students, Grades 1-3*, is a self-instructional course for teachers of the 1st through 3d grades. It is designed to help them to decide whether a given textbook is biased, and to select supplementary materials to remedy the bias, if one is found. The course is the first and only validated research-based technique for analyzing textbooks for black children and identifiying materials to correct textbook deficiencies.

The course begins with teachers viewing the filmstrip (currently a set of slides) with audiotape, in which a narrator gives an overview and rationale for the course and describes the activities contained in the teacher's handbook. Once the filmstrip has been seen, the teacher can complete the rest of the work for the course individually at any convenient place and time. Materials needed for the activities are either supplied by the course coordinator or are readily available.

Content analysis ends with an exercise designed to help teachers test their recollection of the techniques they have learned and the appropriate use of these techniques.

SUBJECT AREA(S)

The subject area is teacher training for analyzing racial bias in textbooks.

This course is organized into four self-instructional lessons. Lesson 1 is concerned with the impact of illustrations in children's books and the corresponding importance of portraying black persons in illustrations. Lesson 2 is concerned with role models as shown in textbook illustrations. The importance of role models, the tendency of children to imitate adults, and the positive and negative aspects of stereotyping are discussed. Lesson 3 is concerned with the accurate presentation of the experience of black people in our country, both currently and historically. Lesson 4 discusses the need for supplementary materials to remedy the deficiencies apparent in most textbooks. It provides lists of books and other materials that can be used at various grade levels and in various curriculum areas.

INTENDED USERS AND BENEFICIARIES

Although designed primarily for teachers of the 1st, 2d, and 3d grades, the course can be used by parents of children in these grade levels and persons preparing to become primary school teachers.

Other potential users are textbook authors and publishers, State textbook selection committees, inservice and preservice teacher training institutions, and curriculum specialists.

The ultimate beneficiaries are the students who will benefit from teachers' increased abilities to analyze and subsequently correct deficiencies found in textbooks.

GOAL(S) OR PURPOSE(S)

The goals of this course are: (1) To increase teachers' awareness of the need to analyze textbooks for black children, (2) to provide teachers with techniques for analyzing textbooks, (3) to identify materials which can be used to correct deficiencies found in textbooks, and (4) to provide teachers with ideas for incorporating supplementary materials in various subject areas.

PATTERNS OF USE

The course is a self-contained unit of instruction with activities that are sequential and cumulative. It may be used as part of an inservice or preservice teacher education program and used with social studies programs.

ASSESSMENT PROVISIONS

Checkup exercises are contained in a teacher's handbook. Course coordinators are instructed to collect teacher reaction to the course within 1 week after the course is completed and to have teachers complete a followup questionnaire 1 month after the course. This questionnaire is designed to collect data on whether teachers apply the techniques learned in the course to the textbooks which they use in their classroom.

TIME REQUIREMENTS

The course can be completed in a total of about 15 hours at the rate of 1 hour or more per day as desired.

IMPLEMENTATION PROCEDURES

Although this product is primarily self-instructional, a coordinator is needed to administer the course. The coordinator can be a teacher, principal, district curriculum coordinator, or teacher training specialist. In short, anyone who is interested in insuring that black children get a "fair shake" in the public schools can administer this program.

Personnel Required for Product Adoption and Implementation

A coordinator without special training can implement this unit of instruction. For ease of administration, it is suggested that the coordinator work with teachers in no more than three schools at any given time.

ASSURANCES AND CLAIMS

Assurances

The information gathered from field testing of the materials in local school districts and in five school districts scattered across the Nation indicates that the course is transportable and can be successfully implemented without additional aid beyond that given in the coordinator's and teacher's handbooks. The developer has not received any reports of harm associated with the use of this product.

The materials do not appear to display any form of social bias including ethnic and sexual stereotyping. This assurance is based on an examination of the materials by consultants and on feedback from users.

Claims

The major claims to be made about the course are that:

1. Teachers who take the course will become significantly more aware of the need to analyze textbooks for black children.
2. Teachers who take the course will make significant improvement in their use of the techniques established by the course for analyzing textbooks and in their ability to form the correct conclusion concerning the degree of adequacy of the textbook based on each technique.
3. Teachers strongly support the usefulness of the course.
4. Teachers generalize the course techniques to other educational materials, e.g., films, filmstrips, library books.

These claims are based on the findings of the main and operational field tests. The sample for each of these field tests consisted of primary (grades 1 to 3) schoolteachers from various ethnic backgrounds and from inner-city and suburban classrooms. Approximately 30 teachers participated in the main field test, and nearly 80 participated in the operational field test.

Other important claims which can be made about the product concern aiding the integration process of school districts and careful product development. The former claim is based on reports from educators; the latter is evidenced by the fact that the developer tested and revised the course three times with user feedback incorporated into each revision.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

LEARNING A STANDARD ENGLISH

An individualized programed course for teachers who wish to individualize the teaching of standard English to nonstandard English speakers in grades K-14

Learning a Standard English is a 30- to 40-hour individualized programed course which instructs teachers, K-14, in a classroom management system for individualizing the teaching of a standard English to nonstandard speakers. Numerous speakers of nonstandard dialects often encounter serious difficulties as a result of speaking a nonstandard dialect, most notably in the form of barriers to academic progress, in learning to read, in securing a job, or in achieving desired social status. Thus, schools must provide the opportunity for students to learn to speak standard English if they are not to be denied educational, economic, or social advancement.

Conventional instruction of standard English to nonstandard speakers often ignores nonstandard dialects completely or treats them irrationally (for example, as something to be eradicated). Therefore, the goal of teaching standard English to nonstandard speakers must be augmentation—adding a second dialect to the student's range of skills with every respect accorded the dialect the student brings to the classroom.

Learning a Standard English is designed to provide both preservice and inservice teachers with one proven method of accommodating individual needs in language instruction, in individualizing the language curriculum of students, and in assisting students in gaining oral control of the regionally standard dialect without correcting, replacing, or changing the dialect the student speaks and without implying that the language of the student is incorrect. The course consists of seven printed components: Audiotapes, analysis sheets, pretests/posttests containing the key concepts and skills incorporated within the components, and an information file containing the features most frequently found in nonstandard dialects, their historical source, the major users, the usual context of the feature, and other features which might be integrated into the lessons. *Learning a Standard English* is a self-instruction package, the general format of which is ASSESS—LEARN—ASSESS.

SUBJECT AREA(S)

Seven self-instructional units comprise this programed course in the instruction of teachers in a classroom management system for the individualizing of teaching a standard English to nonstandard speakers. The titles and descriptions of the units are as follow:

Introduction—Reviews basic concepts about dialects, broad phonetic symbols, and features of nonstandard dialects.

Individualization: The basic assumption—Indicates the significance of individualization in the teaching of English as a second dialect.

Eliciting speech streams—Trains teachers in the techniques for securing a representative speech sample.

Creating an individualized usage curriculum—Combines a taped presentation and a programed manual giving teachers procedures for ranking features which occur in student speech and writing a sequenced curriculum for each student.

Selecting, organizing, and banking—Gives teachers criteria and procedures for selecting, indexing, and organizing curriculum materials to meet very specific needs in teaching usage.

Teaching English as a second dialect: Adapting and creating curriculum materials—Provides guidelines for and adapting existing curriculum materials and trains teachers in the skills required in creating new materials, both oral and written.

Classroom procedures or what to do until the computer comes—Contains guidelines for classroom organization related to second-dialect teaching.

A leader's guide—Contains complete instructions for conducting preservice or inservice group sessions.

An individualized guide—Contains complete instructions for proceeding through the course independently.

INTENDED USERS AND BENEFICIARIES

Learning a Standard English is designed for language arts teachers, K-14. Given the autoinstructional nature of the course, it can be used by any language arts teacher.

The ultimate beneficiaries are speakers of nonstandard dialects who will benefit from teachers' increased abilities to individualize the teaching of standard English to nonstandard speakers according to their individual needs.

GOAL(S) OR PURPOSE(S)

The purpose of this instructional package is to teach language arts teachers: (1) To elicit speech samples; (2) to detect, record, and classify nonstandard features of speech; (3) to create from this analysis an individualized usage

905

curriculum; and (4) to select, adapt, and create both oral and written usage materials for use within this individualized program.

PATTERNS OF USE

Learning a Standard English is an autoinstructional package with activities that are sequential and cumulative. It is a sequel to *Dialects and Dialect Learning*, which gives teachers background information on the nature of nonstandard dialects, trains them in broad phonetic transcription, teaches them to identify and categorize specific features of nonstandard dialects, and assists them in making curriculum decisions related to usage teaching. For those who have not completed *Dialects and Dialect Learning*, *Learning a Standard English* includes brief programs which provide the essential background skills. A third package, *Teaching Writing to Speakers of Nonstandard Dialects*, completes the series.

ASSESSMENT PROVISIONS

Students take a pretest before beginning the programed instruction. The general format of the program materials is ASSESS—LEARN—ASSESS. Before each unit, the student takes a test. If the student obtains the criterion for the test, there is no need to take the unit work; the student simply skips the unit and goes on the next. At the end of each unit, there is also a posttest which allows pretest/posttest comparisons. Included are evaluation sheets for each unit to be filled out by the student upon completion of that unit. The student also takes a cumulative posttest on the entire program package and fills out a comprehensive evaluation form. Tests and evaluations are mailed or are given to the group leader at specified intervals.

TIME REQUIREMENTS

The course takes approximately 30 working hours to complete.

IMPLEMENTATION PROCEDURES

Learning a Standard English is a completely self-contained, autoinstructional program designed for use by either individuals or groups. The course is the second in a series of courses for preservice and inservice language arts teachers. For individuals who have not completed the first course, *Learning a Standard English* includes brief programs providing the essential background skills.

ASSURANCES AND CLAIMS

Assurances

There is no evidence to suggest that this program may be harmful or socially unfair.

Claims

Since September 1971, the course has been field tested in five locations: Minneapolis public schools, Detroit public schools, Albion College, Simpson College, and Phoenix public schools. The total number of participants in the course was 57.

Based on participant and consultant evaluation of the materials, as well as on a complete analysis of the data from preservice and inservice teachers completing it, the course was found to be effective in instructing teachers to accommodate individual needs in usage instruction, to individualize the usage curriculum of the students, and to assist students in gaining oral control of the regionally standard dialect. With the exception of scores for "About Dialects," "Eliciting Speech Streams," and "Curriculum Sheet," the gain scores were approximately equal to or higher than the pretest scores (in "Curriculum Sheet," the mean score was the maximum score), indicating that, with the exception of these three sections, the participants were able to identify at least twice as many correct answers after they had completed the program. The most significant gain was in "Creating Materials." In this section, the gain was more than eight times greater than the pretest score. In "Entry Skills," the gain was approximately equal to the pretest score, indicating that the participants had acquired a significant amount of information about social dialects. As reflected in the gain scores, the participants nearly tripled their information base in all areas of *Learning a Standard English*.

Prior to field testing, the validity of the course content was assessed by linguists, educators, and programers. Following each field test, the effects of the materials on the participants' acquisition of skill/knowledge were assessed by pretest and posttest, by a careful examination of the participants for each component of the course. Deficiencies in the course were identified, and revisions were made. Final revisions were made in fall 1972.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Self-instruction package (Includes printed, programed course manual, audiotapes, analysis sheets, pretests and posttests, and unit evaluation sheets, has information file on the features of nonstandard dialects, giving their history and major users plus other items to be taught conjunctively)	1 package per student	Not determined	Consumable every 30 hours

TEACHING A STANDARD ENGLISH TO SPEAKERS OF OTHER DIALECTS

A self-contained, 1-day workshop for English and language arts teachers

Teaching a Standard English to Speakers of Other Dialects is a self-contained, 1-day workshop for language arts and English teachers. The workshop is designed to disseminate up-to-date educationally and linguistically sound information about dialects and dialect learning. The content of the workshop is a development of the project *Teaching a Standard English to Speakers of Nonstandard Dialects*, funded under The U.S. Office of Education's (USOE's) Targeted Communications Program for the purpose of gathering, synthesizing, and disseminating linguistic information as it applies to the teaching of a standard English to speakers of nonstandard dialects. In preparing the workshop, the project staff conducted an extensive review of over 1500 current documents dealing with dialects and dialect instruction. A synthesis of the most relevant information is contained in the *Basic Report*. The workshop itself consists of viewing media and discussing questions pertinent to the teachers' local situation and includes printed materials, five color-sound filmstrips, study questions, and a leader's manual.

Teaching a Standard English to Speakers of Other Dialects involves several basic problems. Misconceptions about dialects, about standard and nonstandard English, and about methods and materials for use in language learning are widespread in both the schools and society. Many textbooks and many colleges and universities do not provide prospective teachers with an adequate background on dialects and dialect learning simply because they too often treat language as "right" or "wrong," rather than "appropriate" or "inappropriate," depending on the context in which it is used. Consequently, teachers often consider the nonstandard speaker's language to be deficient and the speaker to be lazy or ignorant. Attempts to "correct" a nonstandard speaker's language may alienate the student from the teacher and also block the student's motivation to learn a standard dialect. The total damage to nonstandard speakers caused by this lack of current information related to dialects may be profound. These misconceptions should be dispelled and replaced by educationally and linguistically sound information about language and language learning—specifically about teaching a standard English to speakers of other dialects—which should help to overcome the questionable and often damaging attitudes and practices which characterize current approaches to English usage.

SUBJECT AREA(S)

Targeted communications are reports aimed at specified audiences which will interpret and synthesize for these audiences the existing research and related information about dialects. A summary of the materials reviewed in the *Basic Report* is as follows:

General Descriptive Studies and Reports on American Dialects—What is Known (92 pages)
Issues in Dialect Study (52 pages)
Implementation in the Classroom (101 pages)
Teacher Preparation (40 pages)
Bibliographies (412 pages)
Appendix A (2 pages)
Appendix B (14 pages).

INTENDED USERS AND BENEFICIARIES

This project was designed for audiences involved in teaching a standard English to speakers of other dialects, specifically teachers, administrators, and textbook publishers.

The ultimate beneficiaries of this project are speakers of nonstandard dialects whose linguistic capabilities and needs will be furthered or met through elimination of questionable and often damaging attitudes and practices characteristic of current approaches to English usage both in teaching and textbooks.

GOAL(S) OR PURPOSE(S)

Teaching a Standard English to Speakers of Other Dialects is designed to alleviate questionable and often damaging instruction in English usage by providing educationally and linguistically sound materials for those audiences directly and indirectly involved in the task of teaching English to speakers of other dialects; and to interpret and synthesize existing research and related information in a scientifically respectable way, taking into account the constraints under which those audiences and their institutions must operate. Materials are aimed specifically at teachers, school boards, administrators, college methods teachers, and textbook publishers and editors.

908

PATTERNS OF USE

The workshop is planned to fill an entire day, but it could be shortened to meet local needs. Any modification of the workshop plan is entirely open to the workshop leader. The individuals comprising the workshop audience (teacher training institutions, teachers, administrators, supervisors, school boards, and textbook publishers) generally have limited time available for reading and synthesizing interpretative material, and likely little prior knowledge about dialects. Accordingly, a synthesis of the most relevant information is contained in the *Basic Report*. Because the targeted audiences were varied and consequently required different information, the products in this workshop were designed for use individually or as a total package, depending upon the specific situation.

ASSESSMENT PROVISIONS

Because this is primarily a dissemination project, no assessment provisions are included in the workshop materials. During the workshop, participants are asked to discuss study questions or suggest additional questions or topics for discussion, both of which often relate directly to the individual's own instructional situation.

TIME REQUIREMENTS

Although the workshop is planned to fill an entire day, it could be shortened to meet local needs. In its complete form, the workshop requires approximately 7 hours for execution.

IMPLEMENTATION PROCEDURES

The workshop format requires the presence of a leader who will supervise activities and present materials. The *Basic Report* may be of help to the leader in preparing for the discussions to be held during the workshop. The workshop materials may be used on an individual basis as well.

ASSURANCES AND CLAIMS

During the development of each product, representatives from each targeted audience were consulted to assure the relevance and effectiveness of the products being developed. Each product was evaluated first by educators and linguists to verify the linguistic and methodological soundness. This was followed with a review by representatives from the targeted audiences to assure that the language was appropriate, that the content was relevant and significant, and that the most appropriate media for dissemination had been selected. Specifically, the products were evaluated using six criteria: Content, format, interest, effectiveness, usefulness, and time required. The developmental evaluation led to several modifications and revisions of the products.

The annotations used in the bibliography were sent to the individual authors of the references cited for their approvals and were modified to incorporate their additions and suggestions.

The completed products were evaluated by a panel of critics from all levels of education who responded very favorably to the printed material and the media. The comments have been summarized and are available in the technical backup report.

There is no information which suggests that this project may be harmful or socially unfair.

INFORMATION CURRENT AS OF MARCH 1975. ■

TEACHING WRITING TO SPEAKERS OF NONSTANDARD DIALECTS

An inservice or preservice course containing programs in a variety of self-correction and self-pacing formats

Teaching Writing to Speakers of Nonstandard Dialects is an inservice or preservice course containing programs in a variety of formats allowing self-correction and self-pacing. The course provides teachers with background information on the nature of nonstandard dialects in speech and writing, as well as instruction and practice in using this information in individualizing their teaching of writing to speakers of nonstandard dialects.

Competency in written communication is a skill often critical to both academic and vocational success. But the teacher must be concerned with more than the student's writing; speech must also be considered. Speakers of a nonstandard dialect may find direct interference from their dialects in their writing. Thus, the teacher must first understand the nature of the nonstandard dialect involved and then recognize specific nonstandard features which may be causing interference with composition.

The writing program taught in the course is characterized by: Students who work toward individualized objectives, independently and in peer groups, discussing writing objectives, editing each other's papers, and serving as audiences for writing; teachers who understand and respect nonstandard spoken and written dialects, who individualize curriculums for students, who evaluate each piece of writing against a limited and prespecified set of objectives, both during and after writing, and who are consultants, tutors, models, and final readers; a curriculum which is individualized to meet each student's needs in usage, mechanics, and the communicative qualities of writing; and a classroom which is flexible and provides a positive, responsive environment for writing, including stimulus materials, tape recorders, and student exercises on specific nonstandard features.

SUBJECT AREA(S)

Teaching Writing to Speakers of Nonstandard Dialects consists of 10 written units. The titles and page lengths of the units are as follows:

I. The Nature of Nonstandard Dialects (13 pages)
II. Analyzing Nonstandard Writing (49 pages)
III. Detecting Interference (27 pages)
IV. Diagnosis and Prescription (45 pages)
V. Evaluation of Writing (15 pages)
VI. The Units (13 pages)
VII. Peer Groups (20 pages)
VIII. Instructional Strategies (30 pages)
IX. Practicum I (10 pages)
X. Practicum II (50 pages)

INTENDED USERS AND BENEFICIARIES

This instructional package is designed as an inservice or preservice course for use by junior high school, by inner-city teachers, or in English methods courses. However, the individualized approach to teaching composition courses systematically using performance-based objectives is also relevant for inner-city senior high school teachers as well as for teachers of grades 7-12 in suburban schools.

The immediate beneficiaries are junior high school English teachers who learn to understand and respect nonstandard spoken and written dialects and who are then trained to individualize the teaching of writing to speakers of nonstandard dialects.

The ultimate beneficiaries are speakers of nonstandard dialects, students who gain competency in written communication without direct interference from their nonstandard dialects.

GOAL(S) OR PURPOSE(S)

The objectives of this instructional package are: (1) To provide teachers with background information on the nature of nonstandard dialects in speech and writing, and (2) to provide teachers with instruction and practice in individualizing the teaching of writing.

Specifically, teachers learn: (1) To secure representative samples of students' speech and writing; (2) to analyze those pieces of writing for problems to be included in each student's curriculum; (3) to determine from analyses of speech which of the writing problems derive from nonstandard speech patterns; (4) to use information from the analyses to create an individualized, sequenced writing curriculum for each student; and (5) to implement and maintain an individualized program.

PATTERNS OF USE

Teaching Writing to Speakers of Nonstandard Dialects is a self-instructional package with activities that are sequential and cumulative. It is a sequel to *Dialects and Dialect Learning* and *Learning a Standard English*, courses which instruct teachers, grades K-12, in the use of a classroom management system by which the teaching of standard English to nonstandard speakers can be individualized.

ASSESSMENT PROVISIONS

The general format of the program materials is one of ASSESS—LEARN—ASSESS. Within most of the units, there are frequent "check tests" whereby students can determine whether they are actually learning the material. At the end of each unit, there is also a posttest which allows students to compare their program from pretest to posttest.

TIME REQUIREMENTS

The course takes approximately 30-40 hours to complete.

IMPLEMENTATION PROCEDURES

Teaching Writing to Speakers of Nonstandard Dialects is the third in a series of courses for preservice or inservice language arts teachers.

The first course, *Dialects and Dialect Learning*, provides teachers with background information on the nature of nonstandard dialects, instructs them in broad phonetic transcription, teaches them to identify and categorize specific features of nonstandard dialects, and assists them in making curriculum decisions related to language instruction. The second course, *Learning a Standard English*, instructs teachers, grades K-12, in the use of a classroom management system by which the teaching of standard English to nonstandard speakers can be individualized. After completing the course, teachers are able to elicit speech samples; to detect, record, and classify nonstandard features of speech; to create from this analysis individualized usage curriculums; and to select, adapt, and create both oral and written usage materials for use with the individualized program.

ASSURANCES AND CLAIMS

Assurances

There is no evidence which suggests that this program may be harmful or socially unfair.

Claims

Based upon the success of participants at multiple test sites, as well as upon the enthusiastic response of participants and leaders, *Teaching Writing to Speakers of Nonstandard Dialects* should provide both preservice and inservice teachers with one proven method of accommodating individuals' needs in language instruction by individualizing the language curriculum of the students and by assisting students in gaining written control of the standard dialect without correcting, changing, or replacing the dialect which the student speaks and without implying that the language of the student is incorrect. Given an accepting attitude toward language and a tested classroom management system for individualizing language instruction, the teacher should be better prepared to help students strive toward productive competence in a standard English, a necessary skill for all students.

The formative evaluation of the model, conducted in four English classrooms in an inner-city junior high school, provided data to support the effectiveness of the model: Pretest/posttest comparisons revealed an average gain of 8 percent following 10 weeks of writing instruction. The summative evaluation of the model, conducted in one experimental and one control class in an inner-city junior high school, provided further data to support the effectiveness of the model and revealed positive student response toward the course.

The formative evaluation of the materials, tested in classrooms in the Minneapolis Public Schools, yielded information on which modification of the exercises was made. Lack of sufficient time and moneys precluded summative evaluation on most of the materials. However, a summative evaluation of the student program revealed a mean growth from pretest-to-posttest of 41 percent. Most students evaluated the program as relevant and interesting.

The formative evaluation of the course successfully identified points of weaknesses within the individual components which led to revisions and modifications. The formative evaluation was conducted at a 1-week workshop for inservice junior high teachers, in an English methods course at a State university, and at a college in Iowa as part of an interim course in methods of teaching English. Growth scores indicated that the components led to an effective change in skill/knowledge of the participants.

The summative evaluation of the course was conducted at five sites. Comparison of pretest-to-posttest scores of the participants indicated that the course was effective in teaching the skills and information specified in the program objectives. Although not all participants met the criteria for each component, all participants did show a gain from the pretest to posttest on each component of the course, with an average gain range of 19 to 50 over the mean percent for pretest scores.

ENGLISH AS A SECOND LANGUAGE PACKAGE

A product designed to aid the teacher to relate the instruction to the specific needs of the students

The *English as a Second Language Package* is designed so that the teacher can relate the instruction to the student's specific needs. Emphasized is the audiolingual approach—listening and repeating—since this most closely approximates the way one's own language is learned.

Materials demonstrate effective, validated methods and techniques of audiolingual instruction for the teacher to practice. Not only is an instructional cycle outlined to show necessary steps to program development, but instruction is also offered in developing lesson plans.

Audiolingual techniques included in the package incorporate substitution drills, conversion drills, and addition drills as well as pronunciation tests, picture tests for listening comprehension, grammar tests, and comprehension and reading tests.

The package includes a presentation in a dialect from India which utilizes the shock language approach by offering experience with a foreign language. The presentation is intended to apprise instructors of the difficulties encountered in the classroom by the non-English-speaking adult.

Another package component is a 15-minute color film which demonstrates the audiolingual approach. It includes vocabulary, controlled dialog, sounds, and sentence patterns in an actual classroom situation. A teacher's workbook augments the package.

SUBJECT AREA(S)

Teacher training in teaching English as a second language is the subject area.

INTENDED USERS AND BENEFICIARIES

The intended product users are language teachers at any level, elementary and secondary teachers, and school administrators. The ultimate intended beneficiaries are Spanish-speaking children and non-English-speaking adults.

GOAL(S) OR PURPOSE(S)

The intended purposes are: (1) To demonstrate to participants the audiolingual approach to teaching language; (2) to show participants the components of an audiolingual program; (3) to convince participants of the effectiveness of the audiolingual teaching method; (4) to motivate participants to adapt the audiolingual method to their own teaching; and (5) to persuade participants to accept the philosophy, and to apply the techniques and processes, of the audiolingual teaching approach.

PATTERNS OF USE

The package is designed so the teacher can relate the instruction to the specific student needs. Emphasized is the audiolingual approach—listening and repeating—since this most closely approximates the way one's native language is learned.

Special emphasis is placed on the correct use and application of the audiolingual approach which moves the adult speaker from the reproduction of English sounds to controlled conversation in four steps.

ASSESSMENT PROVISIONS

The measurement of achievement is determined as follows: (1) By observed feedback indicating involvement by participants, a knowledge of the components and their relations as revealed in the posttest, and an expressed intent of utilization of the learnings acquired as indicated in an open-ended evaluation in the posttest; (2) by feedback obtained in the posttest indicating a knowledge of the components of the package and expression of the intended utilization of the learnings acquired; and (3) by a longitudinal survey of participant techniques, methods, and content made 6 months after the presentation.

TIME REQUIREMENTS

Four hours of learner time is required.

IMPLEMENTATION PROCEDURES

This product is not consumable and may be reused extensively. It involves use of media components; e.g., slide/tape presentations, a 16mm color film, and workbooks.

The product is complete for use without developers. Training by a (Southwestern Cooperative Educational Laboratory) staff member on a consultant basis is readily available and may be purchased, but it is not a requirement for product implementation.

Use of this self-contained product involves no preexisting consumer restraints, organizational changes, or additional resources. Consumer maintenance involves only protection and normal care of the component materials. Community reactions have been regularly positive, and the product operates equally well with all envisioned user groups.

Personnel Required for Product Adoption and Implementation

Training is available from SWCEL (but not mandatory), as noted, for the local administrators wishing to use the package for instruction of adult education teachers in their schools. Costs for the product adopted will be dependent upon various factors; e.g., the local expense involved in a 4-hour teaching session which can be performed by one staff member and concomitant released time for teachers. All necessary equipment is included or easily available in any school.

ASSURANCES AND CLAIMS

Several features of this product are unusual and encountered rarely, if ever, in the various educational interventions which attempt to reach the ultimate target group—the non-English-speaking adult. A particular approach, audiolingual techniques, is utilized and presented in such a fashion that the teacher can relate it to specific student needs. The teacher is also offered instruction in lesson plan development.

The design of the presentation of techniques and a comprehensive approach to using them for the adult-education teacher who directs efforts toward teaching the undereducated Spanish-speaking adult is unique in itself.

Since this product is directed toward the linguistic concerns of a minority segment of the population, both male and female, those who were involved in the planning and production of the series included representatives of the ultimate target minority beneficiaries. This group also included religious representatives.

THINKING AND REASONING GAMES (PART OF THE THINKING AND REASONING PROGRAM)

Three teacher-training units which enable teachers to act as effective facilitators for children in an independent, game-oriented learning environment

Thinking and Reasoning Games provides teacher training which enables teachers to act as effective facilitators for kindergarten and 1st-grade children working in an independent learning center. The emphasis is on process teaching and the value of using games as learning tools. Three major units—An Overview of the Game Center, Management Skills, and Use of Games in the Center—make up the product.

Through game playing, children can develop or strengthen independent work skills, personality skills, and analytic thinking skills. Piaget (1962) and Reilly (1974) postulate that interindividual relationships, as well as reflective thinking and other analytic thinking skills, are developed through play. The importance of the staff development package is that it provides information which enables the teacher to value games as learning tools and provides the teacher with skills needed to allow the children to play independently.

The primary role of the teacher during the 1-hour-a-day program is that of a facilitator. The teacher sets up the materials so that the children can work independently, introduces and teaches games with rules, and uses observation and reinforcement skills to assess the children's growth. Suggested methods for working with children who are having problems developing certain personality traits or work skills are provided. It is most important in this program that the teacher be able to step back and allow the children to develop at their own rates and in their own ways.

The package has taken a multimedia approach using video tapes, activities, and printed materials to express ideas. A trainer's manual and a teacher's manual are provided. The trainer's manual provides suggestions for activities to guide the teachers and to reinforce the ideas presented through the teacher's manual.

SUBJECT AREA(S)

Three major units comprise the teacher training package: Overview of the games program, management skills and teaching, and using games in the classroom. The overview of the program includes a video tape and a paper which describes the roles of the children and the teacher and the skills developed through play with games. The management section provides skill training in setting up the classroom, in identifying and reinforcing appropriate behaviors for the independent work center, in diagnosing a child's growth in skills and helping a child when problems develop, and in developing observation skills. The third section concentrates on providing teachers with the information and experience that will allow them to value games as learning tools. Teachers analyze games in order to identify skills required. They play the games and practice teaching them using certain teaching strategies. Guidelines on how to select games and a list of previously tested games are included.

INTENDED USERS AND BENEFICIARIES

Thinking and Reasoning Games is designed for elementary schoolteachers who work with multicultural kindergarten and 1st-grade children. Ultimately, the benefit should be for the children themselves, as they will be able to learn independent work skills and to develop other skills at their own pace in an informal learning environment.

GOAL(S) OR PURPOSE(S)

The major goals of the program are to train teachers to use skills which encourage children to work independently and to provide teachers with knowledge and experience which allow them to value and use games as learning tools.

PATTERNS OF USE

The package has been designed so that the major units can be presented in any order, thus providing a meaningful experience for the teacher.

The package supplements any curriculum that uses games as a way of learning. It was specifically designed to supplement a problem-solving program.

ASSESSMENT PROVISIONS

Although the effectiveness of the product is evaluated by the developers (see "Claims" section), no formal test instruments are included in the package. Student evaluation is considered to be an ongoing part of the teacher's activities.

TIME REQUIREMENTS

The teacher training is designed to take approximately 8 hours. The program, once implemented in the school, would be 1 hour, 3 to 5 days a week.

IMPLEMENTATION PROCEDURES

A trainer's manual is provided so that supervising teachers can conduct the workshop with teachers in their district. Training will be provided for the trainers through SEDL.

Special User Considerations

The use of games as learning tools is actually an ancient custom. However, teachers may find that parents visiting the school may not understand the allotment of 1 hour of time for play with games. SEDL has produced a brief pamphlet especially for use with parents. It lists concisely the benefits children gain from play with games.

ASSURANCES AND CLAIMS

Assurances

Thinking and Reasoning Games has been pilot tested with approximately 36 children during the 1973-74 and 1974-75 school years. Field test is scheduled for fall 1975.

To date, no social, ethnic, or sex stereotyping bias has been noted. Printed materials contain the generic "he/she." Pilot test classrooms have been multiethnic and represented both sexes. Teachers have represented three major ethnic groups; i.e., Mexican American, Anglo American, and black American. Games used in the product have also been reviewed by the multiethnic program staff for possible bias. No reports of harmfulness have been received from users, developers, or observers.

Whether the games package can stand alone as a separate product will be assessed by November 30, 1975.

Claims

Pilot test data are currently being collected and are, therefore, incomplete. The 1974-75 school year is the first year that a systematic evaluation has been designed for the product. Specific claims will be forthcoming based on pilot test and field test. However, the variables of interest regarding claims are reviewed here.

The product is going through the systematic development process which all SEDL products undergo. Following a needs assessment (context evaluation), a design test is made of the initial product design. Following refinements from design test trial, the product is pilot tested, utilizing formative evaluation techniques for further refinement guidelines. Following pilot testing and subsequent revisions, the product is field tested on a wide-scale basis. Summative and comparative evaluation information is gathered at that time prior to marketing.

The current pilot test evaluation design includes three strategies:

1. Observations from product developers are being systematically collected via instruments developed by the evaluation staff to respond to questions of effectiveness of games as a strategy for learning. Over 100 observations will have been made during the 1974-75 school year.

2. A games analysis has been performed in terms of Meeker's Adaptation of the Structure of Intellect Model. Based on the identification of the cognitive operations involved with games learning, a posttest covering these operations will be administered to both project and comparison groups. Results of a general achievement test administered by the school at the beginning of the year will be used as a covariable in analyses.

3. The product is scheduled to be critiqued by a games specialist external to the laboratory. A critique will also be made by a consultant external to SEDL prior to final dissemination.

RD 110 052

THE GAME CENTER (PART OF THE THINKING AND REASONING PROGRAM)

A color film to encourage children in grades K-2 to cooperate in a game-learning environment

The Game Center is available as a 10-minute, color, 3/4-inch video tape or as a 16mm film. It was developed to motivate and interest kindergarten to 2d-grade children in learning and using behaviors/rules cooperatively in an independent games learning center. It emphasizes the theme of cooperation while focusing on four behaviors for children to use in an independent learning center. Each of three characters in the video tape represents a particular behavior/rule which would increase the effectiveness of an independent learning center: (1) Pickupit—picking up and putting away the games, (2) Leggy—walking carefully around others' work, and (3) the Thuzzies—talking quietly. Messmaker, a fourth character, continually messes up the center. All of the characters learn from two children how to cooperate so that they all have time to play with the games instead of limiting themselves to one behavior.

Posters with pictures of the fantasy characters are included for the teachers to use in discussing the rules and to interest the children in following the rules. The teacher's manual with instructions for the effective use of the video tape and posters includes: (1) Questions and discussion guidelines for the teacher to use in helping the children identify the behaviors/rules for the game center and (2) methods for teaching the behaviors/rules to the children.

The video tape is designed as a management tool for teachers. It should help teachers become aware of their expectations for children by helping them identify these expectations in concrete terms. It may function to limit the number of rules imposed upon children.

The teacher introduces the children to the game center, demonstrates the materials available for the chidren to use, shows the video tape, discusses—using the poster as support—the video tape, and establishes with the children the rules in behavioral terms for the center.

SUBJECT AREA(S)

The video tape is designed to be used as a management tool for teachers as they introduce children to an independent learning center where it is essential that the children cooperate and share responsibility.

INTENDED USERS AND BENEFICIARIES

The video tape is designed to be used by kindergarten and 1st-grade teachers who work with multiethnic children.

The developers believe the video tape may be successfully used with students in the 2d- and 3d-grade also. Although the video tape was designed to accompany the Thinking and Reasoning Game Center package, it can supplement effectively any other game center such as a mathematics or reading game center.

GOAL(S) OR PURPOSE(S)

The teachers will use the video tape: (1) To introduce and teach in a positive manner rules/behaviors for an independent learning center using games, (2) to motivate children to work cooperatively with each other and to follow the rules established in the game center, and (3) to identify in concrete behavioral terms their expectations for children in the game center.

PATTERNS OF USE

Units can be used in any order. The package can be used as a supplement to the Thinking and Reasoning Program or with any other program which includes an independent learning center focusing on the use of games as learning tools.

ASSESSMENT PROVISIONS

No formal testing procedures are included with the product.

TIME REQUIREMENTS

The developers suggest that 20 minutes of interaction between the teacher and the children follow the 10-minute video tape. They also recommend that the teacher spend approximately 5 minutes at the beginning of each game center period to review the behaviors expected and periodically observe and reinforce the use of the behaviors during the period. Because of the high interest children display while viewing the video tape, it could be shown a second or third time as reinforcement after Christmas and Easter holidays.

IMPLEMENTATION PROCEDURES

A 16mm film projector or a 3/4-inch, color video player and monitor are needed. The product is designed to be used to complement other programs already being used in the classroom.

ASSURANCES AND CLAIMS

No social bias has been brought to the attention of the multiethnic program staff. Care was taken to include multiethnic representation and a balance of nonstereotypic sex roles in the film.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

PREPARING TEACHERS FOR MEXICAN AMERICAN CHILDREN

A document to help teachers understand the learning problems of Mexican-American children

The school is presently the primary social institution directed by the community to assume a major role in taking steps to improve the Mexican-Americans' status. The school has three possible avenues for action in correcting low school and societal achievement: (1) To change the child, (2) to change the school, or (3) to change the social systems. Responsibility for such changes is passed on to the teachers. However, the teachers' failure to understand the interrelationships between culture, society, personality, and behavior often impedes this change. Thus, teacher improvement, in addition to other institutional changes, can contribute to raised Mexican-American group status. Changes must occur in present teacher-preparation programs, in teachers, and in schools. Cooperation between schools and teacher-preparation institutions can produce changes which will ultimately trickle down to the real clients—the children.

SUBJECT AREA(S)

This document deals with how teachers can be prepared to teach Mexican-American children in a way which will ultimately improve the Mexican-Americans' status.

INTENDED USERS AND BENEFICIARIES

The intended users are teacher educators involved in preparing teachers for minority-group children.

GOAL(S) OR PURPOSE(S)

The goal is to present ways for preparing teachers of Mexican-American children so that they may aid in improving the status of Mexican Americans.

PRACTICE-CENTERED TEACHER TRAINING: STANDARD ENGLISH FOR SPEAKERS OF NONSTANDARD DIALECTS

A manual for training teachers of standard English to understand speakers of nonstandard dialects

Practice-Centered Teacher Training: Standard English for Speakers of Nonstandard Dialects is a syllabus or manual for the training of teachers of standard English to adapt to speakers of nonstandard dialects. It is based on the proposition that important elements of foreign-language teaching methodology are applicable to teaching standard English as a second dialect and that this methodology can be taught effectively if applied linguistics and methodology are closely integrated and lead to immediate practical applications.

SUBJECT AREA(S)

Part I: Applied linguistics (70 pages) covers phonology, morphology, and syntax of standard English and identifies variations found in nonstandard black English and English reflecting a Spanish influence.

Part II: Teaching procedures (51 pages) covers management of audio lingual activities, presentation of basic materials, oral teaching of structure, teaching of structure through reading, teaching of pronunciation, teaching of sound/letter correspondence (spelling), teaching of reading, using visual aids, and using electronic equipment (language laboratory).

Part III: Microlessons (26 pages) provides 15 short lessons covering examples from phonology, morphology, and grammar. For each microlesson, learning goals, linguistic basis, and suggested teaching behaviors are specified.

INTENDED USERS AND BENEFICIARIES

The primary users of this manual are practicing teachers or teachers in training who will be teaching students whose native speech is Spanish or nonstandard English. The ultimate beneficiaries are students who wish to learn standard English to use in situations where it is appropriate.

GOAL(S) OR PURPOSE(S)

The goal is to provide teachers with an introduction to common patterns of nonstandard English and a guide to methods of helping children master comparable patterns of standard English. The intent of such teaching is not to change the student's native dialect or to replace it by the standard, but rather to make the standard dialect available to the student.

PATTERNS OF USE

This volume can be used in preservice classes or inservice training of teachers. It can also provide a self-help instrument for teachers not undergoing formal training. In conventional courses, the text can be used in one- or two-semester or quarter courses. Its length makes it suitable also for intensive summer workshops.

ASSESSMENT PROVISIONS

No formal assessment devices are provided. The best test of the effectiveness of this material will be found in the behavior of the pupils whose teachers use and apply it.

TIME REQUIREMENTS

See "Patterns of Use."

IMPLEMENTATION PROCEDURES

The volume is self-contained. Where video tape facilities are available, teachers can use the microlessons to practice microteaching, with or without a master teacher, and to analyze their performance. Suggestions for the use of these materials in a language laboratory are provided in the text.

ASSURANCES AND CLAIMS

Portions of the manuscript were field tested with various groups during development. No evidence of negative effects or social bias has appeared during these tests or in subsequent use.

MULTIMEDIA TRAINING PACKAGE FOR SPANISH-SPEAKING PARAPROFESSIONAL TEACHERS: "EL ARREGLO DE LA SALA DE CLASE PARA BUEN COMPORTAMIENTO"

A multimedia training package for Spanish-speaking, low-income paraprofessional teachers of preschool children

El arreglo de la sala de clase para buen comportamiento is a multimedia training package for Spanish-speaking, low-income paraprofessional teachers of preschool children, particularly those who have little or no formal training. Designed for a leader, an observer, and 15 participants, the package requires 5 sessions of approximately 1-1/2 hours each.

The package includes: (1) A leader's manual; (2) detailed session procedures; and (3) a variety of media products – video tapes, filmstrips, films, transparencies, and take-home pamphlets. All aural materials are in Spanish; printed materials are in Spanish and English. Each session procedure is designed with an introduction, a straightforward presentation of concepts, group participation activities, and a summary.

The leader's manual includes specific instructions on techniques of group leadership, directions for increasing participation through a variety of techniques (such as role playing, simulation, and group discussion), and an overview of the training sessions.

The sessions present basic principles of classroom arrangement and maintenance which will help reduce children's behavior problems. Participants learn how to adapt furniture to meet the needs of young children, how to display materials, and how to arrange space for classroom activities in ways that will promote children's independence while encouraging good classroom behavior.

Each session procedure includes detailed information on how to present the particular concepts included. Following a statement of the purposes and focus of the session, the format is as follows: Introduction, review (if appropriate), overview of media presentation, presentation, discussion, group participation activities, summary, and evaluation. Sample dialog is included when appropriate.

Media includes two video tapes or films, filmstrips and audiotapes, a set of transparencies, game cards, pictures, and pamphlets for participants.

A 4-month context analysis study in January 1973 included interviews with nationally recognized experts, a literature search, conferences with representatives of regional and State agencies, and interviews with teacher trainers. Results indicated that although there are many early childhood curriculum programs and materials, the majority are designed for children rather than for adults who interact with children. Further, few materials are available for training the paraprofessional or assistant teacher who has no college degree. The need for alternative presentation modes utilizing modern media technology and placing minimal reliance upon printed material was also identified.

Few, if any, materials are organized in modular form or discrete packages which can be presented independently. Few are presented in multimedia format so that the adult learner with minimal reading skills can succeed. Few are presented in Spanish.

The instructional principles followed are to develop awareness, knowledge, or comprehension and then to apply them. A variety of teaching strategies is described in the leader's manual and also is built into each session procedure. Strategies include large- and small-group discussions, simulation activities, role play, problem-solving situations, games, and evaluation, as well as direct presentation of information.

Role of implementer. The group leader secures a meeting room and necessary equipment, operates audiovisual equipment, leads the sessions, and distributes and collects evaluation forms.

Participants watch media presentations and participate in large- and small-group discussions, role play, and problem-solving activities. Take-home pamphlets which reinforce concepts presented in the sessions are provided.

SUBJECT AREA(S)

This module includes the following subject areas: (1) How inapporpriate arrangement and maintenance frequently result in behavior problems, (2) how children feel when the classroom environment is inappropriate, (3) how to change or adapt existing facilities to meet the needs of children, and (4) how to select and display classroom materials.

INTENDED USERS AND BENEFICIARIES

The intended users of this module are Spanish-speaking low-income paraprofessional teachers of young children who have had limited formal training in preschool education.

GOAL(S) OR PURPOSE(S)

The participant will: (1) Recognize the relation between room arrangement and management and classroom behavior problems; (2) recognize physical settings that do and do not meet the needs of children; (3) know which factors to consider in arranging space for various kinds of activities; (4) know how to select, display, and determine the quantity of manipulative materials to minimize behavior problems; and (5) understand the teacher's role in establishing rules for use of classroom materials.

PATTERNS OF USE

Sessions are sequential and cumulative. They may be used as part of inservice or preservice training programs.

ASSESSMENT PROVISIONS

Tests of participant knowledge of module content are provided for use at the beginning of the study and following completion of the package. In addition, criterion-referenced tests of content for each session are provided.

TIME REQUIREMENTS

The package consists of five sessions, each requiring a period of approximately 1-1/2 hours.

IMPLEMENTATION PROCEDURES

No special equipment is required, and all materials are provided. No specific previous training is required, but a 1-day training session for leaders is recommended.

ASSURANCES AND CLAIMS

Assurances

No reports of harm—physical, psychological, sociological, or other—have been received at this time as a consequence of any activity of the product. Additional data will be collected during pilot and field testing.

No complaints of ethnic or sex-role bias have been received at this time. Additional data will be collected during pilot and field testing.

Claims

The Southwest Educational Development Laboratory follows a systematic process for the development of educational products. This product development incorporates the entire gamut of activities in the formulation, development, testing, and evaluation of an educational product so that quality is assured.

Products are cycled through design testing, after which materials are revised on the basis of feedback from the target population, leaders, and observers; through pilot testing, and revised on the basis of feedback; and finally field testing, after which a final revision based on field data is made.

The multimedia training package for Spanish-speaking paraprofessionals, *El arreglo de la sala de clase para buen comportamiento* is being cycled through the laboratory's developmental process and is currently in pilot testing.

THE IMPLICATIONS OF BILINGUAL EDUCATION FOR DEVELOPING MULTICULTURAL SENSITIVITY THROUGH TEACHER EDUCATION

An aid for teachers who are sensitive to the cultural differences of their pupils

Teachers must be continually alert to the difference in languages, values, and customs and seek to understand their students as real people. Otherwise, the student who must learn English as a second language develops insecurity instead of security. When the acceptable norm in a class has been based on the work of the typical middle-class Anglo, the culturally different student meets with predetermined failure. Language maturity needs to be assessed in these children in terms of auditory discrimination of all necessary phonemes and the habitual use of the current syntax or grammar. Interaction with the teacher, on an individual basis, is also crucial for the child. If the child understands sound patterns in English, the beginning instruction should be in English; if Spanish, the instruction should be in Spanish. The second language should be introduced systematically but gradually to develop genuine bilingualism in the student. The bilingual-bicultural program encompasses all the domains of the learning process. The student should acquire the concepts and skills of two languages and should attain a positive self-image through the understanding of cultural values. A multicultural program increases the appreciation of the contributions of other cultures and fosters the democratic ideal.

SUBJECT AREA(S)

This publication is intended for bilingual teachers and their trainees.

INTENDED USERS AND BENEFICIARIES

The teacher education community is the intended user.

GOAL(S) OR PURPOSE(S)

The publication deals with biculturalism, particularly as it relates to bilingualism. It is published to help both preservice and inservice teachers become conscious of cultural differences and contributions, and then convert their knowledge and appreciation into sound educational practices.

CONFRONTATION: HUMAN RELATIONS TRAINING UNIT

A set of films to aid teachers in analyzing specific interpersonal race-related problems in their school

This human relations training unit was originated by Far West Laboratory for Educational Research and Development, Oakland Unified School District, San Francisco Unified School District, University of California education extension, and educational television station KQED. It was originally designed for teachers and administrators in multiethnic elementary and high schools in the large urban school districts of the San Francisco Bay area. The pilot project, *Confrontation: Human Relations Training Unit*, was adapted and disseminated by the Anti-Defamation League in 1970. The goal is to help teachers and other school personnel to analyze specific interpersonal race-related problems in their own school and to propose and implement solutions. The components of the 10-hour unit are an introductory film, four "stimulator" films presenting typical school problems acted out by real students and teachers (not actors), and discussion leader training films. Subjects covered by the course are: Increasing communication and understanding between school administration and the community; ways in which teachers' language offends minority-group students; rules dealing with dress codes (such as, dress, hair length, sunglasses); and classroom conflicts.

The unit must be implemented by a coordinator for the whole school district. The coordinator introduces the program to school principals and staffs, organizes groups at each school by means of a preview film, trains discussion leaders for all the groups, and evaluates each group. At each participating school, teachers meet for five separate sessions, which begin with the viewing of a film in a large group. For instance, the second session begins with a film about language that alienates. A black student is shown listening to a transistor radio during class. The teacher grimaces, comments "I do not understand how you people can afford radios but do not bring a pencil to class," and threatens to confiscate the radio permanently. After watching this film, the group divides into small groups of 10 for 2-hour discussions of the issues which the film raises. They discuss issues in their own school and their own behavior. The composition of the small groups remains the same for the whole course. Discussion group leaders, who have undergone 10 hours' training to prepare to be leaders, are provided with suggestions for stimulating discussion about each film. Sample discussion starters for the film deal with the teacher's attitude toward the student's property, what is conveyed by the teacher's facial expressions, and what "you people" means to the teacher and to the student. At the end of the fifth and final session, participants and discussion leaders fill out evaluation forms on the group experience.

The distributor intends that the small-group staff discussions continue after the completion of the formal course. Besides the immediate awakening to problems and retraining of attitudes, the course can provide an ongoing pattern of more open staff communication.

SUBJECT AREA(S)

This training unit deals with human relations.

INTENDED USERS AND BENEFICIARIES

Intended users are administrators, teachers, and other staff members in multiethnic middle and high schools, youth-group and church-group workers, and preservice trainees in education. The product is also suitable for use with teenagers in secondary school social studies programs.

GOAL(S) OR PURPOSE(S)

Participants become aware of personal and institutional attitudes and actions that are prejudicial to minority groups in their own school and discuss and implement solutions that can improve the "human relations climate" of the school. Another goal is to train teachers and administrators to be effective group discussion leaders.

PATTERNS OF USE

The five films, discussion leader's guide, and coordinator's handbook make up a complete inservice (or preservice) training program that can be implemented either for staff in a single school building or on a districtwide basis, or as a class program at a training institution.

ASSESSMENT PROVISIONS

After viewing films of simulated problems, participants discuss them in small groups, relate filmed problems to their own school situations, and propose ways to achieve better human relations. The discussion leader/guide suggests ways of evaluating progress during the sessions, and the coordinator's handbook provides techniques for assessing the impact of the overall training.

TIME REQUIREMENTS

Five sessions of approximately 2 hours each are recommended.

IMPLEMENTATION PROCEDURES

Discussion leaders are trained to preside over groups of 10 participants to lead analyses of behavior shown in the films, to relate them to their own school and personal behavior, and to stimulate plans for improving the school's treatment of minority-group students and parents. In a required 10-hour training course, discussion leaders analyze scenes in films that participants will see and then role play in order to learn how to deal with participants who may hinder discussion.

A coordinator introduces the unit to each school in the district, forms and schedules groups, recruits and trains discussion leaders, and evaluates each group. Consulting help may be contracted through the educational services staff of the Far West Laboratory.

A 16mm sound film projector is needed.

ASSURANCES AND CLAIMS

Assurances

Despite the controversial nature of the films' content, neither the laboratory nor the distributor has received any complaints. On the contrary, the distributor reports continual enthusiasm for the product by users.

Claims

Testing of the participants in the Far West Laboratory's pilot study in 1968 indicated that the unit did create interest and awareness of problems and could change teacher attitudes. The filmed problems were judged to be significant at the time. However, some of the problems are now dated (such as, the one on miniskirts and long hair); those on race are understated by today's standards; there are only a few situations illustrating the unique situations of Spanish-heritage and Chicano students. In some urban areas, the language presented in the film would seem very mild. Whether attitudes and behavior actually change would seem to depend on the openness and vitality of the interpersonal exchange in the discussion groups. This in turn depends upon the skill of the discussion leaders—especially those working with interracial groups. So it appears that the success of the program rests heavily on the coordinator's ability to recruit, select, and train discussion leaders. To attract participants and good discussion leaders, the distributor suggests that inservice salary credit be granted.

TRANSCULTURAL COUNSELING: NEEDS, PROGRAMS, AND TECHNIQUES

An analysis of literature concerning the counseling needs of minority groups

Counselors and other social professionals, as well as laypersons, have been and are increasingly concerned with the guidance and counseling needs of the cultural and ethnic groups in our society. New programs need to be implemented and existing ones revised and updated. This publication will sensitize as well as activate the intended audience to provide needed services and help to this segment of society.

SUBJECT AREA(S)

Subject areas will include a review of the literature and specific programs and practices relating to the counseling of minority persons.

INTENDED USERS AND BENEFICIARIES

Intended users include counselors, pupil personnel workers, graduate students, counselor educators, and administrative personnel.

GOAL(S) OR PURPOSE(S)

The goals of this program are: (1) To review, analyze, and draw implications from the literature concerning the counseling needs of minority groups and (2) to review specific programs and procedures for counseling with minorities.

MATERIALS AND EQUIPMENT

The price of this product has not yet been determined.

ASSURANCES AND CLAIMS

This document will not perpetuate sexism, racism, or other biases such as those related to religion, age, or socioeconomic stereotypes.

OVERVIEW

MARY ELLEN VERHAYDEN-HILLIARD
American Personnel and Guidance Association
Washington, D.C.

and

MARY LOU RANDOUR
National Institute of Education
Washington, D.C.

Since the passage of title IX of the Education Amendments of 1972 forbidding sex discrimination in educational institutions, increasing numbers of educators have been analyzing sex discrimination in education and developing methods to eliminate it. With some answers now in hand, there is a need to alert all educators and other significant adults to the phenomena of sex discrimination and to provide them with resources that can be used to recognize and overcome the destructive consequences of the explicit and implicit sex role stereotyping which limits goals and, therefore, the lives of students.

The literature on sex discrimination provides a description of the current role of the woman in society, her history, and how it is changing. It also reveals that sex role stereotyping, sex bias, and sex discrimination have their taproots deep in the widely held belief that girls should spend their adult lives only as wives and mothers whose financial needs will be taken care of by husbands. This role model affects the self-concept of girls and women by limiting their perception of what is considered "appropriate" to do regardless of their real abilities and interests.

Because of this stereotyped perception, few girls and young women have been self-motivated or encouraged by educators to make long-range plans in order to develop ongoing careers, independent of possible later marital or parental status. The tragedy is that the Cinderella archetype, living happily ever after with little need or desire to work, bears little resemblance to the statistical reality.

The American woman of the 1970's is a person who works outside the home (45 years if she remains single and 25 years even if she marries); she may be divorced (the divorce rate has risen 109 percent since 1962 and is still climbing). In divided families she is usually responsible for the children and she may find child support to be nearly nonexistent. Finally, whether she is single, married, or divorced she will discover that she will live longer than most men and is likely to find herself among the two-thirds of the elderly poor who are women.

Ms. Mary Ellen Verhayden-Hilliard, who is the Director of the Sex Equality in Guidance Opportunities Project at the American Personnel and Guidance Association, Washington, D.C., prepared the Overview section on the state of the art.

The section on NIE products was prepared by Ms. Mary Lou Randour, Educational Associate in the Education and Work Group at the National Institute of Education, Washington, D.C.

Of the 54 percent of American women between the ages of 18 and 65 who are in the labor force, the majority are locked into jobs such as clerical help (35.2 percent) and service workers (16.6 percent) such as beautician and waitress. Of all working women, only 15 percent are professional women and three out of four of these are either teachers or nurses. Even in the professional area the jobs are not on a career ladder. For example, although 68 percent of all elementary and secondary teachers are women, less than 1 percent of the school superintendents are women. Additionally, even when a woman works at the same job as a man she can expect to make less money for the same work.

Educators must begin to examine and to assess their role in the reinforcement process that ignores or minimizes full development of a girl's potential. Methods must be developed to assist girls and women to explore widely and to assess their educational and career plans based on abilities and interests rather than restrictive sex role stereotypes.

What must be emphasized repeatedly is that present sex role stereotypes are a serious disservice not only to girls and women, but also to our society as a whole. Because females have not been allowed, or encouraged, to select from all of the possible societal roles, society has not been able to receive the full benefit of women's potential.

Keys to understanding the blocking processes of sex role stereotyping and discrimination in education, and in society, are needed in order to remove those blocks and allow the creative abilities in women to be expressed and used. Girls and women, even those with the highest education, have been allowed and encouraged to view themselves as preparing for an essentially satellite role. This role places them in a secondary position, as an adjunct and homemaker for the male breadwinner. It is time for educators to convey to the American girl and woman that it is appropriate for her to achieve, independent of possible marital or parental status, and that rather than accepting a sex-based limitation she must begin to question those who expect her to adapt to an underachieving, secondary status as a life pattern.

Breaking through the sex role barriers and enlarging the career goals and options of girls and women may be the most important contribution practitioners can presently make to a girl's education.

Women now represent 53 percent of the total population in the United States. Underappreciation of their talents ignores their abilities and wastes enormous resources of human energy. In recognition of this dilemma, the National Institute of Education has developed a series of products to help educators understand the dimensions of this problem.

NIE and sex fairness activities

Awareness of the dynamics of sex role sterotyping must precede action if real progress is to occur. The Far West Laboratory for Educational Research and Development (San Francisco, California), in conjunction with the Stanford Center for Research and Development in Teaching (Stanford, California), has developed a number of films dealing with various aspects of the problem. Three films deal exclusively with awareness and sensitivity to sex role stereotyping. Part of the *Protocols on Sex Role Stereotyping in Schools*, these films demonstrate specific instances of the negative effects of sex role stereotyping. By viewing and discussing these films students and teachers can begin to establish a framework for interpreting behavior vis-a-vis sex biases.

The mature woman reentering education or work also needs well-informed support. The increased divorce rate, later age marriages, and woman's heightened awareness of herself as an independent individual have greatly increased the numbers of women reentering the worlds of work and education. *The Women and the World of Work* catalog (Educational Development Center, Newton, Massachusetts) is an invaluable aid to counselors working with these women, and to the women themselves.

Recognizing the enormity of the problem, one can see that while the existing NIE products provide a valuable and needed service, they are not enough. Developing NIE activities, which will make a further contribution, include research being done by the Women's Research Program inhouse at the NIE.

The current understanding of how girls and women now express their achievement needs and how they could express them is being studied by the Women's Research Program. Achievement roles are conceptualized as direct and indirect. Direct achievement requires persons to act in an assertive way on their own behalf to further their own career goals. For example, occupational roles associated with direct achievement are surgeon, truckdriver, and politician. The sex associated with these occupations is invariably male. Indirect, or vicarious achievement roles, are enabling, facilitating, and backup roles. Examples of occupational roles associated with this mode are nurse and secretary. These roles are an extension of the wife/mother role in the family which requires nurturing, facilitating behavior in which achievement needs are satisfied vicariously through the achievement of others.

Since human beings possess both the ability to achieve directly as well as the capacity to take pride in someone else's achievement, the ideal would be for both sexes to be able to use either mode depending on the situation, but not on the sex role. The Women's Research Program is in the process of developing conceptual frameworks needed to underpin a new understanding that will encourage and enable girls and boys, women and men to express direct or indirect achievement aspirations. Achievement will depend on individual needs and circumstances, but not on sex roles.

A further NIE effort is being made through television—a powerful force which reaches millions of children and the significant adults in their lives—to expand career awareness by reducing the negative consequences of sex and race roles. *The Television Career Awareness Project* currently under development will attempt to show that interests and occupational roles are not sex linked and that general interests which children have could potentially be translated to occupational roles in a broader way than is currently done. The NIE effort in this area is very important because it utilizes a medium which children watch with interest and respect even before they enter school. The forces that shape girls' career interests and aspirations begin early and come from many sides. Television can be used productively to counteract the traditional stereotypes and present new alternatives.

The supporting materials and activities to this effort, such as the *Parent and Teacher Guide* and the community outreach activities, reflect the importance of conveying the same information to parents and school personnel in order to reinforce the hoped for change in children's concept.

NIE, and specifically the Education and Work Group and the Women's Research Program within NIE, are working to carry out their mandate "to assure all individuals an equal opportunity to receive an education of high quality regardless of race, color, religion, sex, national origin, or social class."

Coordination and communication

In conclusion, if the effects of the NIE research and development activities are to be long lasting, an ongoing social/political relationship between national and local levels must be developed. It is clear that these efforts to end sex discrimination will have significant impact only if both those with the power to institute change as well as those working actively with students have the information and procedures they need to move forward. For programs to have widespread impact, communication of the research findings and the program materials must be disseminated widely. This *Catalog* is a beginning step in that direction.

RD 120 001

AFFIRMATIVE ACTION: WOMEN'S RIGHTS ON CAMPUS, REPORT NO. 6

An examination of laws governing affirmative action programs on sex discrimination on campus

Traditional sex discrimination on college and university campuses is coming to a halt. Recent Federal Affirmative Action requirements call for the development of procedures to promote and insure the equitable treatment of faculty and staff women in employment and promotion to provide them with fair representation in all aspects of campus activities. More than 80 percent of the Nation's colleges and universities are affected by the Federal Affirmative Action Program and are threatened with loss of Federal funds for failure to comply. This report examines the current laws governing affirmative action programs and sex discrimination on campus, and describes the approaches universitites and colleges have taken to comply with the laws.

SUBJECT AREA(S)

Current affirmative action programs and sex discrimination are examined in this report.

INTENDED USERS AND BENEFICIARIES

This monograph is designed primarily for State and Federal agencies, institutions of higher education, policymakers, and decisionmakers concerned with sex discrimination and policies eliminating discrimination in their institutions or agencies.

GOAL(S) OR PURPOSE(S)

This 48-page monograph was planned originally as a literature review foundation for researchers, thereby saving them time in reviewing the affirmative action issue, and presenting them with the basic facts concerning these issues so that they could expand and develop their own programs. This monograph also serves as a guide for administrators in developing their personnel policies.

ASSURANCES AND CLAIMS

This monograph was used in discussions at Oberlin College with administrators, faculty, and students. It was judged the most comprehensive survey of the issue at that time from both a legal standpoint and in terms of a practical application of the law.

RD 120 002

GIRLS AT 12
(PART OF THE ROLE OF WOMEN IN AMERICAN SOCIETY PROJECT)

A film for grades 10-12 on the impact of sex role stereotyping on career choice

Girls at 12 is a 1/2-hour, unstaged documentary film (16mm, color) about three young friends—Diane, Mary Ann, and Laura—going about their daily lives in a small industrial city just outside Boston. The focus is on their transition into adolescence, including the many complex influences at home, school, and in their peer group that are shaping the girls' identities as women and their expectations about the future. Despite the girls' clear energies and abilities, the overriding pressures call for them to be pretty, popular, and (eventually) married. Careers are secondary, even though people in the film recognize that realities and opportunities for women are changing fast.

The film is aimed primarily at 10th-, 11th-, and 12th-grade students. It also has wide appeal and many applications for adult audiences. Its primary purpose is to stimulate discussion and increase audience understanding of the way the socialization process occurs (i.e., the ways cultural expectations about adulthood, "manhood," and "womanhood" are passed on) and the impact that socialization patterns, particularly sex-role stereotyping, can have on men's and women's lives and career choices. These insights can help high school students to become more realistic and more creative in making decisions for their futures.

Curriculum materials to accompany the film have been funded by the Ford Foundation. These include *Vignettes*, short filmed interviews with five women who play a role in the girls' lives; a teacher's guide suggesting ways to work with the film and *Vignettes* in a variety of classroom situations and course contexts; and a student resource book, including activities, bibliography, and filmography to help students further explore film-related issues.

The film and accompanying resources are the first curriculum unit in a proposed 10-unit, film-based semester high school course exploring turning points and critical stages in women's lives.

SUBJECT AREA(S)

The film may be used as the basis for a minicourse in a variety of subject areas or can be integrated into a range of ongoing courses in such areas as social studies, English, humanities, health, home economics, women's studies, guidance, film, and teacher training. Since the film is open-ended and has an identity both as art and as primary source material, it lends itself to flexible use.

INTENDED USERS AND BENEFICIARIES

The film is aimed primarily at 10th-, 11th-, and 12th-grade students. It is being used in classrooms with differing racial, ethnic, and economic backgrounds. Although developed for high schools, it is also widely used by adult audiences including parent groups and PTA's, women's groups and colleges; professionals working in guidance, social service, and education; career placement firms; libraries, community groups, and church associations; and State departments of education, particularly curriculum and resource divisions.

GOAL(S) OR PURPOSE(S)

The primary purpose is to help adolescents examine a critical stage in women's lives so that they might begin to make more informed choices at crucial points in their own lives, particularly in relation to work and careers.

Other goals are: (1) To provide teachers and students with a shared, repeatable body of primary source material of an involving nature; (2) to provide much needed teaching materials at the high school level relating to women's issues; and (3) to help teachers and students consider value-laden issues relating to men's and women's roles so that differing points of view would be acknowledged and respected, and subjective feelings and attitudes could be shared without infringement of privacy.

PATTERNS OF USE

Although the film is intended eventually to be part of a larger film-based high school curriculum, it may be put to a wide variety of uses. It can stand alone; it can be shown to parents and other adult groups, and it can be used for teacher training for a minicourse, for example, in sex-role socialization of adolescents. (The accompanying Ford-funded curriculum resources provide for a minicourse on the sex-role socialization of adolescents, particularly adolescent girls.) It can be integrated into a range of ongoing courses at both the high school and college levels in such areas as social studies, English, humanities, home economics, women's studies, guidance, and film.

The film is not didactic but is more a form of source material that raises issues and questions without posing solutions. This open-ended quality allows individual teachers and classes to start with differing concerns and carry their investigations in different directions with varying degrees of complexity, for example, in some classroom situations, the teacher or leader might use the film to start discussion about socialization processes in students' own lives, a form of consciousness raising. In another situation, the film might be source material for a class studying sex-role socialization or psychology of women. In addition, many teachers have felt that their students learn a new form of "literacy" in learning to see the subtle socialization processes that the film explores.

The film is a resource which can work by itself or in combination with other materials and discussion to energize many different kinds of learning, ranging from consciousness raising to substantive inquiry in the direction of a formal discipline. The possibilities are as limitless as the energy and imagination of teachers and students who participate.

ASSESSMENT PROVISIONS

Evaluation of a traditional kind is currently beyond the scope of this project for two reasons. First, the film and accompanying materials are designed to help students explore questions of personal values. Increased awareness and attitudinal change are slow to appear and difficult to assess precisely. It is even more difficult to pinpoint the cause of such change because heightened social consciousness is accelerated by the mass media and the larger community as well as by peers, families, schools, individual research, and experience. Second, the overall design of the curriculum is modular. Separate films can be turned to any number of uses. Teachers and their classes will go in many different directions from the common start provided, and the goals, potential behavioral outcomes, and criteria for success will vary. Consequently teachers will want to define their own specific classroom objectives and methods of evaluation at this stage.

TIME REQUIREMENTS

Refer to "Patterns of Use."

IMPLEMENTATION PROCEDURES

The film does not require any special equipment or facilities beyond the use of a 16mm projector. The only organizational requirements would be the adaptation of the product into the normal classroom schedule. Although no formal teacher training is necessary, both a teacher's guide and a student resource book will be available in the future for better implementation of the film.

Although the issues in the film involve both boys and girls, some teachers have encountered initial mixed reactions in using this product with boys. Particularly in classes of younger students, boys may be defensive, having heard just enough about "women's lib" to consider women as the enemy. The topic that the class is considering is socialization and life at 12; although the focus is on socialization of girls, the topic can be presented as one which affects both sexes.

Personnel Required for Product Adoption and Implementation

A classroom teacher with knowledge of 16mm projector/audiovisual equipment is all that is required. The teacher requires no special training to present the film to the class.

ASSURANCES AND CLAIMS

The information gathered from pilot trial and subsequent use in seven Boston area schools indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented without additional aid beyond that given in the teacher's guide. The film was designed to eliminate any form of social bias, ethnic or sexual stereotyping, and inappropriateness of content. The developers have not received any reports of harm associated with the use of this product. The film and support materials have evoked from students and teachers the desired positive response. The film has been used satisfactorily by a large number of high schools, colleges, and other organizations without developer assistance. Although the film portrays three 12-year-old Caucasian girls in a middle-class, industrial city adjacent to Boston, the socialization issues posed are relevant to all races and to both sexes.

PARENT-STUDENT HANDBOOK ON SEX BIAS AND STEREOTYPING: IMPLICATIONS FOR CAREER PLANS (A PRODUCT OF CPSS, THE CAREER PLANNING SUPPORT SYSTEM)

A resource for parents of high school students on techniques for helping their children become aware of sex bias in the career world

The *Parent-Student Handbook on Sex Bias and Stereotyping: Implications for Career Plans* will provide a resource for parents of high school students. Research has shown that parents are very influential in the development of the career aspirations of their children. The handbook will give parents information about sex bias and stereotyping, as well as possible techniques for helping to counteract their effects. Among them is helping their children become aware of the pervasiveness of sex bias and stereotyping in the career world. School personnel may distribute the handbook to parents for their own use or employ it as the basis for discussion groups. Parents are the intended audience. The individual reads the information and is given suggestions for possible activities involving the students, the school, and the community.

SUBJECT AREA(S)

Careers, counseling.

Product topics include: Probability that children (both sons and daughters) will work, status of women in the work world (past, present, and future), importance of parents as "significant others," socialization practices that can lead to sex bias and stereotyping, activities for further involvement in the topic area, and a bibliography.

INTENDED USERS AND BENEFICIARIES

The range of potential users is extremely broad: Parents of high school students, parents of children who will be high school students, and people who intend to become parents. The ultimate beneficiaries are the students who will benefit by becoming aware of the wide range of options available to them as they are making their career plans.

GOAL(S) OR PURPOSE(S)

(1) To inform parents about the effects of sex bias and stereotyping on the career interests and opportunities of youth, (2) to provide activities that parents can use to counteract the effects of sex bias and stereotyping on the career interests and opportunities of their children, (3) to make clear to parents that public schools are obligated to maximize opportunities of all children to benefit from the full range of school programs, and (4) to acquaint parents and students with the rights of people to equal opportunity in education and employment.

PATTERNS OF USE

The handbook is intended for self-instructional use by parents, as individuals, as a mother-father pair, or with their children. In addition, the handbook may be used as the basis for group discussions. The extent to which the users involve themselves in the suggested activities is expected to vary widely.

ASSESSMENT PROVISIONS

There is no formal testing. A later followup study could be funded to provide information on self-reported changes in attitudes and behaviors.

TIME REQUIREMENTS

Since this product is intended for individual or family use, time completion will vary.

IMPLEMENTATION PROCEDURES

No special equipment or facilities are required. Some schools may choose to use the handbook as the basis of group discussion. In those cases, the designated person in charge would need to arrange for meeting time and place, probably after regular school hours.

Personnel Required for Product Adoption and Implementation

There are no specific requirements, as the handbook is intended to stand alone. However, if schools choose to use it for group discussion, the leader (counselor, teacher, administrator, parent) should be knowledgeable about the area and should have experience in leading discussions.

ASSURANCES AND CLAIMS

This product will provide information documented in the professional literature about sex bias and sex stereotyping and its implications for career planning. No comparable products exist for comparison; however, the need for such a product has been widely stated. Although the material to be presented will be factual, it seems unavoidable that the attitudes of some people will lead them to reject the information.

The handbook will not perpetuate social biases. In fact, it is explicitly designed to deal with the social bias of sexism.

The handbook is being developed on a short-time line (February 1, 1975, to June 30, 1975), so only minimal testing of potential use by parents will be possible. Reviews of the handbook are scheduled for May 1975. Information will be made available following the review.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Parent-Student Handbook on Sex Bias and Stereotyping: Implications for Career Plans (handbook)	1 per family unit	To be announced	Yearly

PROTOCOLS ON THE PROCESS OF CHANGE (SEX ROLE STEREOTYPING IN SCHOOLS)

Two films to demonstrate how to bring about changes in stereotyped thinking in student career choice

Developed under a protocol materials grant from the U.S. Office of Education, these two films present examples of classroom activities designed to change stereotyped thinking. Each film illustrates a model of attitude change that involves: Attention (focusing on the stereotype); comprehension (finding instances that contradict the stereotype); retention (reinforcing awareness of contradictory evidence); resistance (rejection, partial or complete, active or passive, of contradictory evidence); and change (voluntarily or spontaneously exhibiting new behavior demonstrating nonacceptance of the stereotype).

Changing Images shows a 4th-grade classroom in an Oakland, California, school. Over a 5-week period, the teacher helps the students examine stereotypes concerning careers appropriate for males and females. As essential parts of the change process, the students first reveal their stereotypes about careers and sex roles through artwork and discussion. They later begin to discover contradictions between the stereotypes they have expressed and elements of their own experience. They begin to understand that the ideas they have had about male and female occupations may be inaccurate. By the 5th week, some of the students have begun to think about career choices that are usually only chosen by the opposite sex.

Women Emerging provides a more complicated illustration of the same change process. The film depicts the development, over a 4-month period, of a multiethnic women's studies class in a Berkeley experimental public high school. The two teachers, who are Chicano and Black, and the students, who are Black, Oriental, Chicano, Armenian, and White, explore numerous stereotypes and realities about women in different ethnic groups, women and careers, and interactions with men. Racial stereotypes are also examined. In wrestling with certain erroneous assumptions about women, the students succeed in seeing the inaccuracy of the stereotypes and actually begin to change their views of themselves. Yet, in other instances, the young women are still not able to distinguish myth from reality. Thus, the change process as seen in this film is complex.

The handbook, *The Process of Change*, contains: An introduction to the topic of sex role stereotyping in schools and an explanation of why this is an area appropriate for change efforts, a brief summary of the research on attitude change, a presentation of the change model illustrated in the films, annotated transcripts of the films, elementary school example and a high school example of how the change process concept can be applied in teaching practice (these examples are in addition to those provided by the films), recommendations for use of the films and handbook in inservice and other training settings, a list of resources on the topic of sex-role stereotyping, and a list of references to attitude change research.

SUBJECT AREA(S)

The subject area is teacher training in awareness of the process of attitude change.

INTENDED USERS AND BENEFICIARIES

These protocols are intended for use by teachers, teacher trainers, teacher trainees, school administrators, elementary and secondary school students, parents and other community members, and those concerned with women's studies.

GOAL(S) OR PURPOSE(S)

The major goal is to identify instances of the stages in the process of changing sex role stereotypes.

PATTERNS OF USE

These two films can be shown in any sequence, or a single film can be shown in isolation. Each film should be followed by discussion. It is recommended that films and discussion be supplemented by directed observation in classroom settings.

ASSESSMENT PROVISIONS

There are no provisions for assessment of student learning contained in this set of materials.

TIME REQUIREMENTS

Films and discussion require a minimum of 2 hours, if shown at a single session. Followup observation and later discussion and analysis of that observation would require an additional 2 hours of student time (1 hour out of class and 1 hour in class).

IMPLEMENTATION PROCEDURES

These materials are readily usable in the standard discussion format for college class meetings or inservice workshop sessions. The handbook provides the instructor with all necessary background information as well as suggestions for use of the films.

ASSURANCES AND CLAIMS

There is no evidence to suggest that this product, when used as directed, will be harmful. No complaints of harm have been made as a result of any of the presentations which have been made to many groups comprised of teachers only; teachers, administrators, and students; and teachers, administrators, parents, and students. In all instances of use by the producers, viewing the films has been combined with discussion and reading. After every formal presentation, at least one member of the audience has been impressed enough to contact the producers to arrange for an additional presentation to a new audience.

This product does not perpetuate sexism, racism, or other biases. Its content centers on helping teachers to become aware of such biases and to combat them. The children and teachers depicted in the films were carefully chosen to include a variety of cultural backgrounds. Teachers who have been instructed with the films have commented favorably about both the multicultural and nonsexist aspects of the materials.

This set of films, which is accompanied by a manual for use by both students and instructors, has been used by many presenters without developer assistance of any kind. These presenters have typically been people who have participated as students in earlier presentations, but they have received no specific training in use of the materials. In none of these instances has evidence of resultant learning been gathered, but outside presenters have commented favorably on audience involvement.

PROTOCOLS ON SEX ROLE STEREOTYPING IN SCHOOLS

Three films to increase awareness of sex role stereotyping

Developed under a protocol materials grant from the U.S. Office of Education, these three films provide a way to increase awareness of sex role stereotyping by presenting actual examples. Each of the 23 instances in the films was drawn from events observed by or reported to the project staff.

By viewing, thinking about, and discussing the events in the films, teachers and students can acquire a framework for interpreting behavior, their own and others'. The films will not eradicate sex role bias; that is not their purpose. They are intended only to answer such important questions as: "What are sex role stereotypes?" "What do they look and sound like?"

Hey! What About Us? provides a fresh insight into sex role stereotyping in physical activities in school, including physical education classes, playground games, and boisterous behavior in the classroom.

I Is For Important focuses on sex role stereotyping in social interactions and emotional expression. It includes sequences depicting sex role biases displayed by teachers in their disciplinary actions and pupil task assignments, resistance by children to role reversal in kindergarten play, anxiety felt by boys over appearing to be a "sissy" before their peers, frustration experienced by boys who attempt to assume a nurturing role or express emotions such as sorrow or tenderness, and the indoctrination of girls with commercial definitions of beauty.

Anything They Want To Be explores sex role stereotypes in intellectual and career-oriented activities. Covering both elementary and high school events, the film illustrates two themes: The low level of competence expected of girls in both academic and vocational problem-solving tasks and the subtle manner in which girls' career aspirations are channeled.

The films were designed to provoke discussion. They can and should be used along with other information. An accompanying handbook, *In All Fairness*, contains an introduction to sex role stereotyping as an issue of current concern, a summary of some of the research on sex differences, suggested resources for further exploration of the topic, annotated transcripts of the films, and suggestions for their use.

SUBJECT AREA(S)

The subject area is teacher training in awareness of sex role stereotyping.

INTENDED USERS AND BENEFICIARIES

These protocols are intended for use by teachers, teacher trainers, teacher trainees, school administrators, elementary and secondary school students, parents and other community members, and those concerned with women's studies.

GOAL(S) OR PURPOSE(S)

The goal of the protocols is to identify instances of sex role stereotyping when they are observed in school settings.

PATTERNS OF USE

These three films can be shown in any sequence, or a single film can be shown alone. Each film should be followed by discussion. It is recommended that films and discussion be supplemented by directed observation in classroom settings.

ASSESSMENT PROVISIONS

There are no provisions for assessment of student learning contained in this set of materials.

TIME REQUIREMENTS

Films and discussion require a minimum of 2 hours, if shown at a single session. Followup observation and later discussion and analysis of that observation would require an additional 2 hours of student time (1 hour out of class and 1 hour in class).

IMPLEMENTATION PROCEDURES

These materials are readily usable in the standard discussion format for college class meetings or inservice workshop sessions. The handbook provides the instructor with all necessary background information as well as suggestions for use of the films.

ASSURANCES AND CLAIMS

There is no evidence to suggest that this product, when used as directed, will induce harm. No complaints of harm have been made as a result of any presentation. Presentations have been made to many groups, which have been comprised of: Teachers only; teachers, administrators, and students; and teachers, administrators, parents, and students. In all instances of use by the producers, viewing of the films has been combined with discussion and reading. After every formal presentation, at least one member of the audience has been impressed enough to contact the producers to arrange for an additional presentation to a new audience.

This product does not perpetuate sexism, racism, or other biases. Its content centers on helping teachers to become aware of and to combat such biases. The children and teachers depicted in the films were carefully chosen to include a variety of cultural backgrounds. Teachers who have been instructed with the films have commented favorably about both the multicultural and nonsexist aspects of the materials.

SEX ROLE DEVELOPMENT IN YOUNG CHILDREN: AN ABSTRACT BIBLIOGRAPHY

A bibliography of materials in the ERIC system about recent research on sex role development in young children

This selective abstract bibliography contains recent references to the development of sex role in infants, preschool, and elementary school children. Entries are from *Resources in Education* (RIE) and *Current Index to Journals in Education* (CIJE).

INTENDED USERS AND BENEFICIARIES

This bibliography is being prepared to alert early childhood teachers, researchers, and students to materials in the ERIC system related to the sex role development of young children. This publication would also be of interest to parents, social workers, psychologists, and students.

GOAL(S) OR PURPOSE(S)

The goal of this bibliography is to provide information on recent research reports and papers on sexism and sex role development—an area of much interest in early childhood education.

SEX ROLE AND PUPIL ROLE IN EARLY CHILDHOOD EDUCATION

A paper on the interaction of sex role with pupil role in early childhood settings

This paper analyzes the interaction between sex role and "pupil role" in the early childhood education setting. It postulates that teachers and schools have demonstrated investment in socializing children to a passive, docile, and dependent role, beginning at the preschool level. This role, called "pupil role," corresponds closely to the traditional female sex role and is incongruent with the standard male sex role. Thus, boys experience conflict and stress in school while girls accommodate to the passive learning style associated with pupil role. The long-range implications of these differential interactions are discussed, along with suggestions from research and theory about the benefits of active over passive learning strategies. Recommendations are offered for teacher training and school reform.

SUBJECT AREA(S)

Subjects discussed in this paper include: Student-teacher relationship and teacher expectation, sex differences and sex role perception, behavior development, and classroom environment.

INTENDED USERS AND BENEFICIARIES

This paper is designed for teachers, administrators, trainers of teachers, and other personnel in early childhood education programs and public schools.

GOAL(S) OR PURPOSE(S)

The goal of this paper is to make teachers and teacher trainers more aware of the interaction of sex role with pupil role in early childhood settings and the problems this interaction presents for both boys and girls.

SOUNDS OF CHANGE: A REPORT ON TRAINING IN COUNSELING AND PROGRAMING FOR WOMEN'S CAREER OPPORTUNITIES

A report on a workshop for adult women planning to return to work

More and more adult women are returning to work. Women who consider such a return after several years of absence from work need special orientation, identification, and encouragement to bridge the gap. The Extension Division of the University of California at Los Angeles designed a several-week workshop to facilitate such change. This report is an account of the activities and some of the conversations which took place in the sessions of that workshop.

SUBJECT AREA(S)

Subject areas include women returning to work, counseling mature women, and bridging the gap from home to work.

INTENDED USERS AND BENEFICIARIES

The intended users of this product are adult and continuing educators and counselors of adults.

GOAL(S) OR PURPOSE(S)

The purpose of this product is to give practitioners a detailed example of a successful innovative program for encouraging women to follow their convictions upon moving from home back to work.

WOMEN AND THE WORLD OF WORK (PRODUCT OF THE HOME-COMMUNITY-BASED CAREER EDUCATION MODEL III)

A manual to help women in their career development

During the past 2-1/2 years, the Career Education Project has concentrated much of its effort on providing information, guidance, and referrals to an often-neglected group needing special assistance with career plans: Women who are not yet in the full-time labor force. These women face more than the usual pressures of acquiring skills, choosing a career, and finding a job; they also face the obstacles of sex stereotyping, discrimination in hiring and advancement, societal pressures to remain in the home as wives and mothers, and the absence of sources of unbiased career information and guidance.

Although the project has been able to help thousands of such women cope with these problems, millions more remain unassisted throughout the country. *Women and the World of Work* has been prepared to assist those who are involved in helping women with their career development and to help the career-concerned women themselves.

This product provides an analysis of the state of women in today's work world, examines their options, and presents some practical suggestions for action to overcome obstacles in planning for and implementing career decisions. Focusing on the concerns of women who seek to begin or resume a career, it specifically addresses those problem areas which the project's clients and counselors have confronted more frequently, issues which face most women in their career development.

After profiling today's working woman and examining the impact of sex stereotyping on her life, the product discusses nontraditional career opportunities in a variety of areas. It then discusses ways a woman can progress by taking stock of herself, learning about the world of work, finding appropriate training to prepare for a career, and then proceeding to enter the work world. Sample résumés, application forms, and interview questions are included as illustrations.

The next section deals with methods of coping with such problems as fears, doubts, child care responsibilities, financial need, and illegal discrimination. This is followed by a discussion of attitudinal, societal, employment, and legal changes which are beginning to alter the position of women in the work world. Finally, a detailed appendix summarizes recent laws and executive orders relating to working women.

SUBJECT AREA(S)

Subject areas include career education, continuing education, vocational and educational guidance, women's studies, and career counseling for women.

INTENDED USERS AND BENEFICIARIES

Women and the World of Work is intended for use by women seeking to begin, resume, or continue their careers and by groups, organizations, and individuals involved in helping such women. In the latter category, the product is particularly appropriate for career counselors, adult educators, and administrators of women's centers.

GOAL(S) OR PURPOSE(S)

The goals of this product are: (1) To provide an overview of the present state of women in the work world, the problems they face, and the sociocultural factors that explain their present position; (2) to discuss nontraditional career opportunities for women; (3) to provide a career planning approach for use with and by women; and (4) to serve as a prototype booklet about which the project can gain insight and feedback from other practitioners.

PATTERNS OF USE

Women and the World of Work may be used in whole or in part as an information source or a supplement to counseling sessions by a wide variety of individuals or agencies working with women. It is particularly appropriate for use by counselors, educators, and placement officers. The booklet may also be used independently by women as a guide to their own career planning. Further, it may be used as part of an ongoing course in women's studies or as an adjunct to awareness or consciousness-raising sessions.

It may be used in conjunction with other publications of the Career Education Project, especially the *Career Development Series*, the annotated bibliographies on career-related materials, and the series of manuals designed to show how to establish and operate a comprehensive career counseling service for adults.

ASSESSMENT PROVISIONS

The materials and information presented in this product reflect what has been learned from the formative evaluation of 2-1/2 years of providing information, guidance, and referral to career-concerned women. After copies of this booklet have been distributed, followup interviews will be conducted by phone, by mail, and in person with selected reviewers to assess its potential utility.

TIME REQUIREMENTS

Because this product can be used by such a variety of audiences in a variety of settings, the time requirements for implementing the described activities will also vary.

IMPLEMENTATION PROCEDURES

Although this product is independent and largely self-instructional, some users might find it helpful to have some assistance from career counselors, professional educators, or placement officers in implementing the described activities. Some readers might find it helpful to use *Women and the World of Work* in conjunction with other Career Education Project publications, as mentioned above under "Patterns of Use."

ASSURANCES AND CLAIMS

This manual contains products and descriptions of techniques determined to be effective on the basis of more than 2-1/2 years of formative evaluation. The manual itself, however, has not yet been distributed, so the developers cannot guarantee its transportability or harmlessness even though every attempt has been made to insure that the manual will have these characteristics.

The manual has been carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, and inappropriateness of content.

EVALUATION, MEASUREMENT, AND NEEDS ASSESSMENT

OVERVIEW

DANIEL P. ANTONOPLOS
Senior Program Officer
Measurement and Methodology Division
National Institute of Education
Washington, D.C.

and

LYNETTE FERRARA
Education Systems Director
TEAM Associates, Inc.
Washington, D.C.

The field of education is currently undergoing renaissance, resistance, and change. As never before in our history, it has become interwoven with and subject to the pressures, demands, and criticisms of other institutions (political, social, technological, and economic), leaving an atmosphere of expanded awareness, need orientation, and educational accountability. This process is exacerbated by immediate needs for knowledge and validated applications and by special interest group priorities. This demand for results cannot be met without accurate assessment, measurement, and evaluation.

A large number of factors have converged to produce the above demands. They include the public concern for more return on the dollars spent by the Federal Government on legislatively mandated evaluation; increased public criticism of the "state of the art" in education; and the thrust for equal educational opportunity. These factors have focused attention on the large number of educationally disadvantaged minority children who lack the basic skills of reading and arithmetic and for whom traditional assessment procedures and instruments are often of questionable validity and reliability.

A variety of evaluation models or approaches have been proposed. These models range from strict measurement approaches that closely resemble research procedures aimed at generating conclusion-oriented data to management information approaches oriented toward the generation of data for decision making. As there is little agreement or data to support the efficacy of one definition model or approach over another, the National Institute of Education (NIE) does not advocate any one definition of evaluation at this time. Empirical data are needed to determine the extent to which the various models are theoretically and operationally different and the particular purpose or goals to which they are best suited.

Most evaluation models are a strategy or set of activities oriented toward providing valid and reliable information to better carry out the function of judgment. Because good judgments depend upon accurate information, evaluation is a matter of generating, measuring, analyzing, and interpreting data. Limitations on the "state of the art" of assessment, measurement, and methodology may severely limit the validity of judgments that can be achieved. Measurement may be defined as a systematic procedure for the description of the behavior of individuals or groups of individuals. Needs assessment is a process by which individuals or organizations (e.g., school boards or parents) articulate goals and select and obtain measures of progress toward these goals or objectives.

Educators have always evaluated pupil ability and performance and assessed the efficacy of alternative instructional programs. For the most part, such evaluations or needs assessments have been based upon the educator's professional experience and knowledge of his or her pupils and community. Since the 1920's, educators have increasingly used "objective" measurement tools (standardized tests) to collect the information required for these judgments. These tests were designed to provide indicators of ability or performance less susceptible to error or bias than judgments derived solely from personal experience or intuition. Standardized tests were used to assign letter grades for course work, place pupils in instructional programs, and select students for admission to educational institutions. The use of such tests gradually diffused to other societal institutions. During World War I the Army used a battery of standardized tests as an aid in the assignment of new recruits. The success of the Army program encouraged the adoption of testing by business and by Government agencies seeking objective tools for selecting and assessing employees.

The number and variety of consumers of the output of measurement tools have grown to include Federal and State administrators and legislators, representatives of interest groups (e.g., business, labor, and ethnic/racial groups), and parents. The diverse information needs of this consumer public have spurred development of new types of measurement tools and the application of new and existing measurement tools to procedures for monitoring Federal, State, and local education programs. Three primary areas of concern have been: (1) The development of measurement tools free of social class, racial, or ethnic bias, (2) the application of these measurement tools to needs assessment and/or evaluation to insure that educational programs are demonstrating effectiveness; and (3) the development of measurement tools which provide evidence of demonstrated skills in both cognitive and noncognitive domains. The following paragraphs provide an overview of these developments and suggest areas where further research and development are required.

Dr. Daniel P. Antonoplos is a Senior Program Officer in the Measurement and Methodology Division of the Basic Skills Group of the National Institute of Education and an Adjunct Professor of Research at the American University in Washington, D.C.

Ms. Ferrara is Director of Education Systems of TEAM Associates. She has participated in design and development of measures of educational disadvantagement for Federal and State school finance systems.

VALUATION, MEASUREMENT, ND NEEDS ASSESSMENT

Trends

The educational measurement movement began as a search for reliable, objective measures of pupil ability or mastery of basic skills. The studies of Meyer (1908), Slack and Eliot (1913), and Falls (1928) demonstrated the wide variance in letter grades given by instructors in the same field of study and by the same instructor to the same paper at varying points in time. In 1910, Thorndike published the first quantitative scales for grading exercises in basic skills. By 1922, McCall was using teachers to develop their own objective tests. The first comprehensive battery of standardized tests, the Stanford Achievement Tests, was published in 1923.

Ability tests grew from the efforts of Binet to develop quantitative tools to identify children who would benefit from placement in schools for the retarded. These tools were first refined into a standardized test instrument in 1916. Pen-and-pencil tests to measure the ability of adults were developed to screen recruits during World War I.

The number and range of standardized tests of ability and performance grew during the 1930's and 1940's. The military and economic development of the cold war spurred the development and dissemination of standardized tests. Federal and State programs aided the expansion of universities and provided scholarship programs. However, such programs could not keep pace with the demand for college entrance. Education administrators who could accept only a fraction of applicants began to rely heavily on standardized measures of aptitude such as the Scholastic Aptitude Test and the Graduate Record Examination.

By the 1960's, the ever-widening influence of test scores raised concerns of members of ethnic and racial groups that tests normed on a white middle-class population or developed in the vocabulary of a white middle-class child were being used to delegate minority children to lower education tracks, excluding them from the college placement that would increase the likelihood of socioeconomic mobility. In many States, civil rights groups charged that biased ability tests were used to segregate minority children in special education classes. Others charged that biased testing had perverse effects on student, parents, and teacher by reinforcing attitudes of inferiority which tended to lower achievement motivation.

A second trend is reflected by an increased demand for tests that would provide information on individual performance that could be interpreted without reference to the performance of other test takers. Most standardized tests were norm-referenced; they provided information on the placement of a pupil's ability or performance in reference to a specified norm group. Criterion-referenced tests measure an individual's ability to demonstrate specific knowledge or skills. A criterion-referenced test administered at the beginning of a program measured the learning needs of each pupil. A criterion-referenced test administered at the end of a program was an indicator of the success of the program in attaining its specified objectives. The National Assessment of Educational Programs (NAEP) which began large-scale testing in 1970 is an example of such a testing program. Items demonstrating levels of knowledge in 10 subject areas are being developed. The popularity of criterion-referenced tests is demonstrated by their adoption in 21 State testing programs. Three of these States (Iowa, Maine, and Minnesota) have adopted some or all of the NAEP testing instruments.

A third trend of the past decade has been the movement toward evaluation of educational programs. The 1960's saw a great expansion of Federal, State, and local programs to provide aid to pupils with special needs (e.g., compensatory education for economically or educationally disadvantaged children). These programs were developed at a time when three other movements in public administration were in vogue:

- A renewed concern for public involvement in the administration of Government programs at the State and local level. This concern was typically expressed through a requirement for a parent advisory council to monitor program design and progress.
- An enthusiasm for program budgeting. This concern was expressed through a requirement that budgets relate expenditures to specific objectives rather than line-item expenditures.
- A concern for accountability. This concern demanded that programs have specified objectives and collect and publish information that would allow monitoring of progress toward this objective.

Title I of the Elementary and Secondary Act of 1965 is typical of such programs. It requires advisory councils, program budgeting, and evaluation. Funds are set aside at the Federal, State, and local level for ongoing needs assessment and evaluation programs.

Titles III and V of the same act provided additional stimulation to the growth of State and local evaluation and needs assessment programs. Title III funds to support the development of supplementary education centers and guidance, counseling, and testing services to local school systems. These funds assisted States in providing local school systems the funds and technical assistance required to develop a testing program. In addition, the evaluation of innovative programs is funded by this act. Title V grants to State departments of education have been a significant source of funds for the development of State testing and assessment programs. Funds are available to finance the development and implementation of a statewide testing program and to develop a management information and dissemination system so that the collected data may be readily used in a State or local needs assessment and evaluation program.

States, as well as the Federal Government, became increasingly concerned with needs assessment and accountability. By 1973, every State had begun the development of an assessment or accountability program; 16 of these were mandated by the State legislatures. Seventeen of the programs collected information for State-level decisionmaking, including collection of data for a program budget or management information system or for inclusion in the formula used to allocate Federal or State school aid funds. Thirteen States had programs which emphasized collection of information for local-level decisionmaking.[1] In 22 States, programs with one or both of these objectives are under development. Although each program requires the establishment of educational goals and objectives and administration of test instruments, program emphasis varies. Wyoming, Kansas, and Georgia initiated programs to encourage local community involvement in definitions of the goals and objectives for the State school system. Testing instruments have been or are being developed to measure progress toward these goals in basic skills, special subjects, and noncognitive areas. In New York, Pennsylvania, and New Jersey, data collected for use in the State program-budgeting system are made available to school district and school administrators and teaching staff. The State sponsors seminars to assist local school staff in interpretation of testing results. Other States such as Colorado provide technical assistance and financial support required by local districts to select local goals and objectives and monitor progress toward these goals.

---

[1] New York has two active testing programs, one in each category.

Practitioner needs

The educational practitioner at the State and local level is called upon to develop programs to monitor the development of individual pupils and to assess and evaluate instructional programs. Federal, State, and local officials, representatives of interest groups, and parents demand that such programs provide detailed information of demonstrated skills in both cognitive and noncognitive domains. Despite the proliferation of measurement tools, there are still areas which need further research. Even when testing materials exist, the local practitioner requires the specialized training to recognize testing instruments appropriate for his or her community and to integrate these instruments into a needs assessment and evaluation program suitable to the community characteristics, educational objectives, and instructional programs. Many of the available needs assessment or evaluation program models require a degree of control over assignment of children and teachers to instructional programs beyond the reach of school officials. Evaluation or assessment of many school programs requires the development of models which do not require a control group or random assignment of children or pupils. In addition, school officials must be trained to interpret the results of a testing program to the community and to school staff who fear accountability will mean a negative evaluation of their performance. This requires training in the interpretation of statistics and leadership in organization and community groups, skills not usually found in the same individual.

NIE response

The National Institute of Education's Measurement and Methodology Division has articulated four goals: (1) To provide for research on technical issues related to measurement and evaluation (e.g., multiple-program/multiple-project evaluation, test bias, test-score decline, and measurement of program implementation); (2) to strengthen understanding of existing measurement strategies for educational research and where appropriate, develop new measurement strategies (e.g., research on norm-referenced versus criterion-referenced measurement, ways to measure the size of an effect, and methods of noncognitive assessment); (3) to improve understanding of existing design-and-analysis strategies and, where appropriate, develop new design-and-analysis strategies (e.g., for estimating causal effects from nonexperimental data; for making appropriate use of data aggregation; and for designing longitudinal research) and (4) to improve knowledge of how to evaluate educational programs and products (e.g., research on improving the utility of evaluations, taking into account the human, social, political, and organizational factors affecting the generation and usage of evaluation results).

NIE's attack upon theoretical and methodological constraints in measurement, methodology, and evaluation coincides with a strong practitioner-oriented focus aimed at immediately improving the acceptability and conduct of evaluations in the public schools.

In order to directly address consumer needs, the NIE has completed the development and dissemination of evaluation training materials (kits) and workshops, and handbooks to assist school superintendents, principals, and other school personnel staff to conduct needs assessments, program planning, progress evaluation, and outcome evaluation, and standardized test selection matched with instructional objectives. Many of these products are described in the section which follows.

Data from the consumers indicate that many of the evaluation products listed in the *Catalog* are now in use in every State of the Union and in 22 foreign countries. To date, over 10,000 school administrators have undergone evaluation training workshops to increase their evaluation skills and train their own school staffs. In addition, over 15,000 Test Evaluation Books matched with instructional objectives have been distributed to improve the selection and uses of measuring instruments in the schools.

The demands for knowledge, improvement, and accountability in education necessitate that the NIE continue its course of action on two major fronts: (1) To build a research and development knowledge base, continually improving the theoretical and technical state of the art in education and research; and (2) to directly meet the needs of educational consumers.

CSE ELEMENTARY SCHOOL EVALUATION KIT: NEEDS ASSESSMENT

The "consultant-in-a-box" for school personnel responsible for program evaluations

What are the goals of education? Everyone has an answer to the question, and the focus varies from place to place—even within a community. It is a difficult task for an individual elementary school principal to ascertain the precise wishes of the school's constituents for the program of education the school should pursue. Research has produced methods for performing a "needs assessment" for a local school. These sophisticated methods have usually required the expense of a highly paid educational consultant who often seems to be interfering in the school's internal matters. The Center for the Study of Evaluation (CSE) has taken the best available procedures for needs assessment and made a "consultant-in-a-box."

The Guidebook is the essential component of the product. It is a manual/textbook providing instruction in evaluation methods for either a single decisionmaker or for using input from teachers, parents, and community members. The Guidebook instructs a principal in sampling parent, teacher, and community input for choosing and ranking goals through goal cards and questionnaires. Teachers and parents sort the cards according to the importance each places on each goal. The Parents' Goal Rating Questionnaire can be distributed by mail. Parents respond to the items and return them to the administrator.

Chapter 3 provides the decisionmaker with procedures for selecting and evaluating tests to measure skills that correspond to the goal statements. Chapter 4 describes procedures for selecting and obtaining standardized tests, two methods for administering tests, determining the frequency of test administrations, and organizing and interpreting the analyzed data. Chapter 5 details procedures for selecting critical problem areas and describes various methods in communicating the results of the evaluation to students, teachers, parents, and school board members.

SUBJECT AREA(S)

Selecting educational goals, educational evaluations, and community participation in decisionmaking are the subject areas of this product.

INTENDED USERS AND BENEFICIARIES

The kit was specifically designed for elementary principals to use with members of the community; it could also be used by superintendents, curriculum planners, educational consultants, teachers, school boards, parents, and any other decisionmakers at grade levels 1-6. A secondary audience for the kit is the educational researcher who uses the kit as a reference tool and does not actually implement or use the procedures.

GOAL(S) OR PURPOSE(S)

The purpose of the *Needs Assessment Kit* is to provide elementary school principals with systematic procedures for making informed, rational decisions about the goals most appropriate for their schools.

Specifically, the goals are: (1) To provide procedures for gathering information about goals which the school should be meeting, (2) to instruct the principal in selecting tests to measure student performance on highly rated goals, (3) to provide the principal with an effective way of interpreting the school's test scores in relation to those of other schools with similar characteristics, and (4) to show the principal how to use a decision model to transform the information already gathered into a set of critical need areas for the school. After completing the kit, the user should be able to make meaningful, explicit assessments of a school's educational needs.

PATTERNS OF USE

CSE Elementary School Evaluation Kit: Needs Assessment is a self-contained, step-by-step system for goal determination. The user (generally an elementary school principal) has flexibility in deciding the degree of community involvement and the procedure (card-sort or questionnaire approach) to be used. A principal may use the kit to determine the high-priority goals in the school or to validate previously determined priority areas.

ASSESSMENT PROVISIONS

The product is a support tool for the principal/superintendent. The kit does not address itself to "trainees." There is no assessment instrument.

TIME REQUIREMENTS

The time required is 3 weeks of an elementary school principal's time and 2 hours for each teacher, parent, or community member who participates in goal rating.

IMPLEMENTATION PROCEDURES

No special equipment is required. Since the kit does require a considerable amount of the principal's time and since the needs assessment procedure will be highly visible within the school and community, it is essential that the principal be committed to making program changes based on the needs assessment. A 30-day examination period is provided by the publisher so that the potential user can decide whether the kit's needs assessment techniques are appropriate for the user's particular school situation.

Personnel Required for Product Adoption and Implementation

An elementary school principal with no special training in measurement and evaluation can implement the *Needs Assessment Kit.* The principal will decide who is to be involved from the school staff, parents, and other community members; these individuals need no training in education but must be able to read English.

ASSURANCES AND CLAIMS

The information in the kit was based on input from elementary school principals and superintendents. The components of the kit were tried out with educators at national meetings and with 23 principals and superintendents in California. The major field test of the kit was conducted during fall 1971 in 69 schools across the country and 103 schools in California. Several conclusions and revisions resulted from the field tests.

The kit will continue to be addressed primarily to principals because they are the main decisionmakers in selecting educational programs. Principals found the kit useful because they do feel pressured to make realistic needs assessment and because the kit's card-sort procedures assist principals in involving teachers and parents in making their decisions.

The kit provides useful information regarding test selection and evaluation; developers expanded the published kit to make test results more useful to principals. Some changes were recommended and made for the card-sort procedures, e.g., number of cards, illustrated instructions, and expanding part of the card-sort process to present questionnaire.

The goal statements seemed to be comprehensive and effectively organized, but parents and community members had difficulty with the vocabulary (1,265 words or phrases were not understood). Since the time of that field test, the language of the goal statements had been revised and tested with a group of parents from low and middle socioeconomic levels. After the goals were rewritten, only 58 words or phrases were not understood, and these dealt primarily with modern mathematics terms.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
CSE Elementary School Evaluation Kit: Needs Assessment:				
Complete kit including guidebook, 24 copies of principal's goal-rating form (4 for each grade level), 48 copies of parent goal-rating questionnaires, 10 decks of goal cards (106 cards per deck), 10 sets of rating mats (5 per set), and 50 goal card tally sheets	1 per school	114.95	Reusable, except questionnaires, rating forms, and tally sheets consumable each use.	
Replacement items:				
Questionnaires (48 copies)	1 set per additional 48 participants*	8.95	Consumable each use	
Principal's goal rating forms (24 copies)	1 per school	6.95	Consumable each use	
Goal card tally sheets (50 copies)	1 set per each additional 50 participants*	6.95		
Rating mats and goal cards (10 sets)	Variable	29.95	Reusable	

*Only 1 of these 2 sets of items would be used or replaced.

CSE ELEMENTARY SCHOOL FORMATIVE EVALUATION KIT

A comprehensive unit including detailed instructions for each step and formation evaluation of a school program with specific learner objectives

The *Formative Evaluation Kit* enables elementary school administrators to evaluate a program while it is in operation. A program, whether it is written or not, is considered to include all the instructional materials, personnel, facilities, processes, and related factors and resources used in achieving specified learner goals and objectives. The kit may be used to evaluate: (1) Programs with cognitive, affective or psychomotor goals and objectives, (2) programs for large or small numbers of students, (3) programs for students of varying abilities and backgrounds, (4) programs conducted in varying physical settings, and (5) programs of varying length.

The principal or an individual selected from the faculty is designated as program evaluator regardless of other roles and is charged with completing the 15 steps of the kit. These steps apply the CSE definition to the problem of completing a formative evaluation of any elementary school program with learner objectives. Each step is written in much the same way as a cookbook or as instructions for putting together a model airplane or child's bicycle. That is, instead of a theoretical discussion about evaluation, each step consists of specific instructions for conducting a part of the evaluation of a program selected by the user.

SUBJECT AREA(S)

Evaluation, administration.

GOAL(S) OR PURPOSE(S)

Formative evaluation can help teachers and administrators: (1) To determine the feasibility of a program in their school, (2) to determine whether a program is operating as planned, (3) to identify aspects of a program where improvement or change is desirable, and (4) to increase student achievement of program objectives and goals.

PATTERNS OF USE

The kit divides the process of planning and conducting the evaluation into 15 successive steps. Each of the steps is presented in a separate folder. Each folder contains materials and instructions which systematically guide the user in applying the step to the program to be evaluated. The kit is designed to be completed one step at a time. Although it may be helpful, it is not necessary to read through all of the steps before beginning the evaluation. The steps include: (1) Reviewing the program plan, (2) constructing an evaluation plan, (3) identifying evaluation questions, (4) selecting a measurement strategy, (5) estimating evaluation resources, (6) selecting evaluation measures, (7) setting evaluation deadlines, (8) establishing communication, (9) collecting data, (10) discovering unanticipated outcomes, (11) scoring measures, (12) preparing data for presentations, (13) making recommendations, (14) implementing recommended changes, and (15) preparing formal reports.

ASSESSMENT PROVISIONS

The kit is an assessment device.

TIME REQUIREMENTS

Approximately 10 percent of the time spent in developing and teaching a program should be devoted to use of the kit materials. Any money available may be used in a variety of ways to reduce the time required. The kit is appropriate to the evaluation of programs of any length, but is most appropriate to those of semester or school-year duration.

IMPLEMENTATION PROCEDURES

The kit has been carefully adapted to the typical elementary school situation. It requires no special equipment, special services, or training, and minimal organizational activities. It is completely reusable for the evaluation of an indefinite number of programs.

ASSURANCES AND CLAIMS

Local pilot testing, national field testing to date, review by technical experts in evaluation, and review by two independent boards of elementary school personnel from California, Colorado, Maryland, and Connecticut have failed to identify any aspects of the materials likely to affect users negatively. These same procedures suggest that the kit materials are replicable and transportable. The national field test involves 40 schools in 27 States using the kit across grades K to 6 to evaluate programs in rural, urban, and suburban settings. A wide variety of data on each step of the kit materials is being collected as part of the field test. This data will be made available as a Center report, probably by the end of 1975.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Kit*	1	Under 50.00	5 years	

*Use of the kit requires either an office copier or spirit duplicator. The user has the option of buying commercially available evaluation instruments or developing "inhouse" instruments. Otherwise, the kit is complete.

AVAILABILITY

The *CSE Elementary School Formative Evaluation Kit* is being field tested nationally in 40 schools in 27 States during the 1974-75 school year.

The kit carries a 1973 copyright date, and application will be made upon publication for a limited copyright of 5 or 10 years.

Final revision of the kit is underway and will be completed by June 1975. The kit will then be submitted to publishers for consideration. Allyn & Bacon, publishers of the *CSE Needs Assessment Kit*, have the right of first refusal as publishers.

Additional information concerning the publication status of the summative kit will be available after June 1975.

Order from:

EVALUATION WORKSHOP I: AN ORIENTATION (EW-I)

A set of highly structured training materials focusing on the major steps and components in the evaluation of educational programs

Evaluation Workshop I: An Orientation is a set of highly structured training materials that provide preserive and inservice instruction for school administrators and the staffs of State and Federal educational agencies and programs. This training normally takes 2 days to complete and usually involves a group of about 30 participants. Its focus is on the major steps and components in the evaluation of educational programs. The workshop materials consist of a participant's notebook that serves as a postworkshop reference tool and field guide, an extensive set of group exercises dealing with typical and important evaluation problems, and a detailed leader's manual. This leader's manual eliminates the need for highly trained (and expensive) workshop leaders or consultants and thereby helps to insure the workshop's transportability, flexibility, and wide dissemination.

The workshop activities are organized so that the participants are first given instruction in a phase of the evaluation process such as how to conduct a needs assessment. The participants (who have been grouped into three-member teams) then attempt to solve a common problem in this phase. At the conclusion of this exercise, the workshop leader provides concrete feedback on how this problem should have been handled and conducts a discussion of the alternative method that might be used. This sequence of instruction, exercise, feedback, and discussion is followed in each of the major phases of the evaluation process and is presented in the context of a typical educational program to insure realism and applicability. Further, the procedures and techniques described in the workshop are those that have been tested and found to be professionally sound and cost effective.

Some of the topics covered by the workshop include: How to conduct a needs assessment, how to build the evaluation design into a program plan, how to determine whether a program is being implemented properly, how to assess the extent to which it is making satisfactory progress, and how to present evaluation data in a form that is understandable to the public. In the course of the workshop, the participants are given exercises requiring the selection, collection, analysis, and reporting of evaluation information in a way that will facilitate and improve educational decisions. The developers of this workshop are also constructing indepth workshops in each of the topics covered by *Evaluation Workshop I: An Orientation* to further educate those who must carry out specific evaluation functions.

SUBJECT AREA(S)

Educational program evaluation is the subject area of the workshop; included in the training are the following stages of evaluation: Needs assessment, program planning, implementation evaluation, progress evaluation, and outcome evaluation.

INTENDED USERS AND BENEFICIARIES

Evaluation Workshop I: An Orientation is appropriate for a variety of educational personnel including: Superintendents, evaluators, project directors, and other administrators; teachers; graduate students; and project monitors. Individuals in the health and social sciences have found participation beneficial also.

GOAL(S) OR PURPOSE(S)

Evaluation Workshop I: An Orientation is directed toward two major goals: (1) Participant understanding of the kinds of information an evaluation can provide for educational decisionmaking and (2) participant understanding of the general procedures and problems involved in selecting, collecting, analyzing, and reporting that information.

The degree to which workshop participants develop such understanding will be determined by the attainment of the following intermediate objectives: (1) Naming, describing, and properly sequencing the major evaluation activities; (2) identification of appropriate data selection, collection, analysis, and reporting procedures for each major evaluation activity; (3) identification of proper and improper use of evaluation techniques, methodology, and design; (4) identification of the kinds of information that should be generated by each evaluation activity; (5) identification of the kinds of information that are needed before evaluation decisions can be made; and (6) identification of the specific functions of the evaluator and those of the project director in each evaluation activity.

RD 130 003

PATTERNS OF USE

The workshop may be used as a one-time training unit or as part of an inservice or preservice program. The workshop has been used as part of a 3-day session on writing proposals. EWI may be the first session of a training program using other workshops provided by the developer.

ASSESSMENT PROVISIONS

The package includes three forms of an assessment instrument to be used as pretests and posttests. In addition to providing data on the achievement of each session's participants, the testing serves to formalize the training and set a tone of "down to work" at the beginnning of the first day. A participant questionnaire is also included in the materials to provide information on the particular leader's effectiveness and to gather data for revision.

TIME REQUIREMENTS

The workshop is highly structured and intended for a 2-day presentation; it may be adapted to a series of 4-hour sessions.

IMPLEMENTATION PROCEDURES

No equipment is required which would not ordinarily be found in a school or other institutional setting. The room arrangements are detailed in the leader's manual.

Personnel Required for Product Adoption and Implementation

One leader who has previously attended the workshop can effectively conduct the training workshop for 24 or more participants. In large groups, a second leader is often employed. The organization arranging the workshop has three options for selecting a leader: An individual within the organization who has previously participated in the workshop, an independent consultant who has previously participated in the workshop (a fee would be charged in addition to materials cost), a representative of the publisher who would provide all materials and conduct the workshop for $100 per participant.

ASSURANCES AND CLAIMS

The development of the workshops's content and organization was guided by the Center for the Study of Evaluation's model of the evaluation process. This model, in turn, was generated by the center's experience in conducting educational evaluations as well as by the writing of recognized experts in the field and the suggestions of educational administrators and evaluators.

The first draft of the workshop went through a series of feasibility tests to determine its appropriateness for the target audiences and to identify components needing modification. When the necessary revisions were made, the workshop was field tested by the center's staff to insure that it achieved its objectives. At the conclusion of the field testing, the workshop was again revised and then released for operational testing. The operational testing was conducted by noncenter staff and provided a check on whether the workshop still achieved its objectives in its final form and under the wide range of conditions in which it would eventually be used. A followup impact study also was conducted in order to be certain that the participants used the workshop training and materials on their jobs. These field tryouts involved over 1,000 participants from numerous local, State, and Federal agencies across the country.

Information obtained from the pretesting and posttesting, the questionnaires, and the impact study indicates that the workshop is effective in reaching its instructional goals, that the training is valued by the participants, that many of the participants use the materials and implement the preedures after the workshop, and that the individuals would recommend the workshop to their colleagues and would themselves participate in additional workshops developed in the series.

In addition to development and field testing of the participant's materials, the leader's manual for the workshop was thoroughly field tested by the developers. Once having participated in a workshop, any educational professional can competently train colleagues. Since the workshop was commercially published, most of the training has been conducted by individuals not associated with the product's development. Data indicate that workshop leaders conduct the session in the manner prescribed in the manual.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Participant's notebook (including exercise pads, pretests, and posttests)	1 per participant	30.00 for more than 30 participants; 40.00 for smaller groups	Reusable as a reference source. Pads and tests are consumed.	
Leader's manual	1 per leader	40.00	Reusable	
Audiotape (use is optional)	1 per leader	Included with leader's manual	Reusable

EVALUATION WORKSHOP II: NEEDS ASSESSMENT (EW-II)

A set of highly structured training materials focusing on the major steps and components of a needs assessment project

Evaluation Workshop II: Needs Assessment (EW-II) is a set of precisely structured training materials that provide preservice and inservice instruction for school administrators and the staffs of State and Federal educational agencies and programs. Training normally takes 2 days to complete and involves a group of approximately 30 participants. Its focus is on the major steps and components needed to conduct needs assessments of educational programs. The workshop materials consist of a participant's notebook that serves as a postworkshop reference tool and field guide, an extensive set of group exercises dealing with typical and important evaluation problems, and a detailed leader's manual. The leader's manual eliminates the need for highly trained, expensive workshop leaders or consultants. This feature accounts for EW-II's transportability, flexibility, and wide dissemination.

The workshop activities are organized so that the participants are first given instruction in a phase of the needs-assessment process. The participants, who have been grouped into three-member teams, then attempt to solve a common problem in this phase. At the conclusion of this exercise, the workshop leader provides concrete feedback on how the problem should have been handled and conducts a discussion of the possible alternative. This sequence of instruction, exercise, feedback, and discussion is provided for each of the major phases of needs assessment and presented in the context of a typical educational program to insure realism and applicability. Further, the procedures and techniques described in the workshop have been tested and found to be professionally sound and cost effective.

Some the the topics covered by the workshop include: How to determine the relative importance of various educational objectives, how to assess the degree to which they are being achieved, and how to decide which ones should be the primary focus for program development or improvement. In the course of the workshop, the participants are given exercises requiring the selection, collection, analysis, and reporting of various kinds of information relevant to the needs-assessment process. The developers of the EW-II are also constructing workshops in other phases of the evaluation process such as program planning, implementation, progress, and outcome evaluation.

SUBJECT AREA(S)

Education evaluation and needs assessment. Needs assessment entails stating the objectives to be met by an educational program and determining how well an existing program is meeting those objectives.

INTENDED USERS AND BENEFICIARIES

Evaluation Workshop II: Needs Assessment is appropriate for a variety of educational personnel including: Superintendents, evaluators, project directors, and other administrators; teachers; graduate students; and project monitors. Individuals in the health and social sciences have also found participation beneficial.

GOAL(S) OR PURPOSE(S)

Evaluation Workshop II: Needs Assessment is directed toward the goal of providing participants with training in the procedures needed to conduct or participate in a needs assessment evaluation in their own educational institution. These procedures, along with the reference materials they receive, help them to identify high priority need areas for their own particular setting.

The degree to which participants develop such an understanding of needs assessment will be indicated through attainment of the following specific objectives: (1) Listing, in order, the major phases of a needs assessment and matching these with the key procedures and purposes of each phase; (2) describing the major approaches for identifying and developing objectives for a needs assessment and listing the merits and disadvantages of each approach; (3) describing the major methodologies of combining ratings from various groups and using these techniques to rank objectives in order of their importance; (4) listing the major factors to consider in setting up a data collection system; (5) setting appropriate standards of student performance; and (6) identifying goal and objective areas that should be the focus of subsequent planning activities.

PATTERNS OF USE

The workshop may be used as a one-time training unit or as part of an inservice or preservice program. EWII may follow *Evaluation Workshop I* which provides an orientation to evaluation.

RD 130 004

ASSESSMENT PROVISIONS

The package includes three forms of an assessment instrument to be used as pretests and posttests. In addition to providing data on the achievement of each session's participants, the testing serves to formalize the training and set a tone of "down to work" at the beginning of the first day. A participant questionnaire is also included in the materials to provide information on the particular leader's effectiveness and to gather data for revision.

TIME REQUIREMENTS

The workshop is highly structured and intended for a 2-day presentation; it may be adapted to a series of 4-hour sessions.

IMPLEMENTATION PROCEDURES

No equipment is required which would not ordinarily be found in a school or other institutional setting. The room arrangements are detailed in the leader's manual.

Personnel Required for Product Adoption and Implementation

One leader who has previously attended the workshop can effectively conduct the training workshop for 24 or more participants. In large groups, a second leader is often employed. The organization arranging the workshop has three options for selecting a leader. An individual within the organization who has previously participated in the workshop, an independent consultant who has previously participated in the workshop (a fee would be charged in addition to materials cost), a representative of the publisher who would provide all materials and conduct the workshop for $100 per participant.

ASSURANCES AND CLAIMS

The development of the workshop content and organization was guided by the Center for the Study of Evaluation's model of the evaluation process. This model, in turn, was generated by the center's experience in conducting educational evaluations, the writings of experts in the field, and the suggestions of educational administrators and evaluators.

The first draft of the workshop went through a series of feasibility tests to determine its appropriateness for the target audiences and to identify components needing modification. When the necessary revisions were made, the workshop was field tested by the center's staff to insure that it achieved its objectives. At the conclusion of the field testing, the workshop was again revised and then released for operational testing. The operational testing was conducted by noncenter staff and provided a check on whether the workshop still achieved its objectives in its final form and under the wide range of conditions in which it would eventually be used.

Information obtained from the pretesting, posttesting, and the questionnaires, indicates that the workshop is effective in reaching its instructional goals, that the training is valued by the participants, that many of the participants use the materials and implement the procedures after the workshop, and that the individuals would recommend the workshop to their colleagues and would themselves participate in additional workshops developed in the series.

In addition to development and field testing of the participants' materials, the leader's manual for the workshop was thoroughly field tested by the developers. Once having participated in a workshop, an educational professional can competently train colleagues.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Participant's notebook	1 per participant	30.00 for more than 30 participants; 40.00 for smaller groups	Reusable as a reference source

CSE PRESCHOOL/KINDERGARTEN HIERARCHICAL OBJECTIVES CHARTS

A set of charts outlining the goals and objectives of preschool and kindergarten education

These charts depict one way of outlining the goals and objectives of preschool and kindergarten education. While the charts will have other purposes, they were designed to complement a needs assessment process.

As a part of the needs assessment process, the center has categorized the goals of preschool and kindergarten education into 21 broad goals and 75 subgoals. The major categories offered by these goal areas and subgoals are being used as a means to categorize all published standardized tests or subtests into the objective areas which they serve best. The tests are further rated in terms of a number of criteria in a published compendium of tests. This means that one might check the availability and quality of tests for each of the specified goal areas of education. For many of the goal areas, either no standardized tests exist or the quality of the offerings for that goal area is so poor that, in essence, the user has no choice.

Just as the 21 curriculum categories were designed to cover all goal areas of concern in preschool and kindergarten programs, so too, within each of the goal categories, the aim was to be as comprehensive as possible. Thus the hierarchies for each goal category represent the broadest range of possible objectives for preschool and kindergarten programs; that is, the objectives are designed to be useful for students of all ability levels within the age group of concern. For example, within the goal area MUSIC, objectives for the category "Singing Techniques" range from "sings in tune" to "interprets musical notation in order to sing a selection." While many teachers would be delighted if their students could just "sing in tune," those teaching at a preschool or kindergarten where students of exceptional musical talent are enrolled might find the objective of "interprets musical notation" very appropriate. In this respect, it is important to note that the most specific objectives within each of the hierarchies fall short of the specificity of behavioral objectives; that is, they do not describe measurable behaviors of students. In addition, the charts are not designed to be teaching hierarchies and therefore do not address themselves to the implementation of objectives into instructional programs. These limitations are necessary if the charts are to prove useful for all preschool and kindergarten educators regardless of program model or approach.

SUBJECT AREA(S)

Educational evaluation, program planning, curriculum development in all major content areas of early education. The charts are organized around the following domains: Affective, intellectual, psychomotor, and subject achievement.

INTENDED USERS AND BENEFICIARIES

The charts are intended as a resource for various individuals interested in early education, including principals, teachers, parents, teacher aides, and, to a lesser extent, district level curriculum experts and evaluation staff. University and other researchers have also used the charts. The ultimate beneficiaries are children between 30 and 72 months of age who will participate in the instructional or assessment programs developed with the aid of the charts.

GOAL(S) OR PURPOSE(S)

The purpose of the *CSE Preschool/Kindergarten Hierarchical Objectives Charts* is to provide a comprehensive and logical taxonomy of goals and objectives to aid the early childhood educator in the job of curriculum planning and assessment.

PATTERNS OF USE

Since the charts are comprehensive, they may serve to acquaint individuals with the range of objectives that might be adopted in early educational programs. In this regard, they can be seen as a "shopping list" of possible goals and objectives to be included in a program. Obviously no one program could include all of the objectives in all of the goal areas; selections from among the areas of the charts would be necessary. With the selection process naturally comes the issue of priorities.

While the charts provide the scope of possible objectives, decisions regarding selection of goals and objectives remain, appropriately so, with the individual users. Because the objectives within a goal area are of varying difficulty levels, they too reflect varying degrees of attainability; that is, with reference to children of a specific age and ability level, some objectives from the charts will be more easily attained than others. When selecting an objective, it would be wise to consider the knowledge, skills, and amount of time that will be required for specific children to meet the objectives.

The objectives charts can also serve as tools for ordering selected goals and objectives. With the "shopping list" available, the teacher will be able to plan how to sequence the learning goals in the classroom. Sequencing, a matter of considerable importance, demands a comprehensive preview of what is to be taught. The charts provide this preview. They do not prescribe the learning sequence, since this decision is made best by the individual user within the context of a total educational program.

Once priorities are established and selections of goals made, the task of operationalizing the objectives into specific, measurable behaviors still remains. The user may find published collections helpful in this regard. Of course, any one of the objectives of the charts might be operationalized in several different ways.

Because the charts are an outgrowth of the taxonomy of goals established for the *CSE-ECRC Preschool/Kindergarten Test Evaluations* book, the two products may provide a useful package for those concerned with assessment of program outcomes. After identifying objectives in one of the goal areas of the charts, the *Test Evaluations* book can then be easily referenced to also identify evaluation instruments available for those objectives. The articulation of these two products is a first step toward providing a common and comprehensive vocabulary of goals and objectives that could be utilized for the writing of evaluation proposals and for communication with school boards or parent groups.

TIME REQUIREMENTS

The amount of time required for use of the charts varies from about 5 minutes for brief inspection of one goal area to 1 year if the charts are to become an integral part of a school's planning procedures.

IMPLEMENTATION PROCEDURES

No special procedures are needed to use the charts.

Summary Cost and Personnel Information

Since the charts are used in a variety of ways and by a variety of types of personnel, no determination can be made as to the average cost. In some cases one set of charts, purchased for $10, would be used by a single individual with no special training. A case at the other extreme might be a school system which would buy a set of charts for every kindergarten teacher and provide a series of workshops on objectives; such a program would require a considerable cost in terms of personnel and materials. The developer has no documentation which would indicate such costs.

ASSURANCES AND CLAIMS

No impact or validation study of the charts has been conducted.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
1 set of charts (15), 17 by 22 inches	1 set per planning team or 1 set per individual	10.00	Reusable in most instances

CSE ELEMENTARY SCHOOL HIERARCHICAL OBJECTIVES CHARTS

A set of charts outlining 145 goals and objectives of elementary education

These charts depict one way of outlining the goals and objectives of elementary school education. While the charts have other purposes, they were designed to complement the Elementary School Needs Assessment Kit. The kit is intended to be used primarily by elementary school principals as an aid in selecting, collecting, and interpreting information that will be needed in making certain types of educational policy decisions.

As a part of the needs assessment process, the Center for the Study of Evaluation (CSE) has categorized the goals of elementary school education into 41 broad goals and 104 subgoals. The 145 major categories offered by these goal areas and subgoals are used to categorize all published standardized tests or subtests into the objectives areas which they serve best. The tests are further rated in terms of a number of criteria in a published compendium of tests. This means that one might check the availability and quality of tests for each of the specified goal areas of elementary education. For many of the goal areas, either no standardized tests exist, or the quality of the offerings for that goal area is so poor that, in essence, the user has no choice.

As an alternative, CSE has prepared these goal charts depicting the 145 goal areas and has analyzed each goal in terms of its subgoals or objectives in a hierarchical fashion. The charts contain objectives ranging from broad goals to more specific objectives which lead to but do not include behavioral objectives. Behavioral objectives may be added easily by referring to the many published collections of objectives.

The most important feature of the *CSE Elementary School Hierarchical Objectives Charts* is that they enable a potential user to begin the development of an objectives-based (criterion-referenced) evaluation system in areas where the offerings of standardized tests are poor or inappropriate.

The procedure for developing an objectives-based evaluation system for any area involves writing behavioral objectives for the statements in the last column of the chart. Many statements may demand several behavioral objectives. Each behavioral objective will require a pool of test items. Thus, the *Elementary School Hierarchical Objectives Charts* provide a framework for organizing the development of an objectives-based evaluation system. In addition, the charts provide a means of linking broad goal areas to specific behavioral objectives, assuring that the objectives used in the classroom are focused on achieving the more broadly stated goals of the system. This concept is at the very heart of the notion of accountability in education.

SUBJECT AREA(S)

The subject areas of this product include educational evaluation, program planning, and curriculum development in all major content areas of elementary school education. The charts are organized around the following major goal areas: Affective, arts-crafts-cognitive, foreign language, mathematics, music, physical education-health-safety, reading, religion, science, and social studies.

INTENDED USERS AND BENEFICIARIES

The charts are intended as a resource for various individuals interested in elementary school education, including principals, teachers, parents, teacher aides, and, to a lesser extent, district-level curriculum experts and evaluation staff. University and other researchers have also used the charts. The ultimate beneficiaries are students in grades 1-6 who will participate in the instructional or assessment programs developed with the aid of the charts.

GOAL(S) OR PURPOSE(S)

The purpose of the charts is to provide a tool for use in objectives-based curriculum or evaluation planning.

PATTERNS OF USE

A survey of users conducted 1 year after publication indicated that the charts were used in many ways. The following list indicates the most common responses to the survey. The charts were used: (1) To select important goals and objectives for an elementary school program, (2) to provide inservice training for teachers, (3) to organize objectives and goals into teaching units, (4) to assure that classroom activities were related to educational goals and objectives, (5) to develop or insure a comprehensive program for all elementary grades in the user's system, (6) to determine areas for testing or evaluation, (7) to write a course syllabus or other long-range plan, (8) to determine age or grade levels at which particular goals and objectives would be pursued, (9) to devise team teaching strategies, and (10) to develop weekly lesson plans.

ASSESSMENT PROVISIONS

Assessment is not appropriate for this noninstructional product. However, a survey of users was conducted by the developer to determine that the charts had value to purchasers and that the goals were comprehensive.

TIME REQUIREMENTS

The amount of time required for use of the charts varies from about 5 minutes for brief inspection of one goal area to 1 year if the charts are to become an integral part of a school's planning procedures.

IMPLEMENTATION PROCEDURES

No special procedures are needed to use the charts.

Summary Cost Information

Since the charts are used in a variety of ways and by a variety of personnel types, no determination can be made as to the average cost. In some cases, one set of charts purchased for $12.50 would be used by a single individual with no special training. A case at the other extreme might be a district which would buy a set of charts for every elementary school teacher and provide a series of workshops on objectives; such a program would require a considerable cost in terms of personnel and materials. The developer has no documentation that would indicate such costs.

ASSURANCES AND CLAIMS

The *CSE Elementary School Hierarchical Objectives Charts* were published as a "by-product" of research on elementary school evaluation. The goal hierarchy was developed for use in other products designed to provide needs assessment procedures for the elementary school principal. Many requests for a product such as the charts were received by the developer. No elaborate instructions are given for using the charts; the purchasers use them according to individual needs. The developers did conduct a small-scale survey of users; the following conclusions are based on the 167 individual responses.

1. The charts appear to be comprehensive. While 14 percent of all respondents suggested additional objectives, the majority of the suggested objectives were already included, usually in different terms.
2. Typically, the users indicated that they had used the charts in three different ways. The most common of these uses were selection of important goals and objectives for an elementary school program and provision of inservice training to teachers.
3. Most commonly, the charts were used by a committee or group of either teachers, or teachers and administrators. However, there was considerable variation in this pattern according to the way that the charts were used.
4. The charts were rated as "irreplaceable" 5 percent of the time, "extremely valuable" or "valuable" 61 percent of the time, "of some value" 21 percent of the time, and of "very little value" or "of no value" 5 percent of the time. (Other responses totaled 8 percent.)
5. No differences were found in the way the charts were used in schools in different regions of the country. Too few returns were received from government, research, and foreign purchasers to investigate differences among users in different working environments.
6. Two suggestions for improving the charts were mentioned frequently. Forty-seven percent of the respondents felt that the charts should distinguish among knowledge, affective, and skill goals and objectives. Forty-five percent suggested that instructions should be provided on how to use the charts for a variety of purposes.

CSE/RBS TEST EVALUATIONS: TEST OF HIGHER-ORDER COGNITIVE, AFFECTIVE, AND INTERPERSONAL SKILLS

An evaluation of 2,610 scales measuring skills in the higher order cognitive, affective, and interpersonal areas

The *CSE/RBS Test Evaluations* is a single volume composed of evaluation ratings of 2,610 scales and subscales considered to test skills in the higher order cognitive, affective, and interpersonal areas. The evaluations were originally completed for use by the humanizing learning program of RBS according to a set of taxonomies developed for that program, but they are expected to be of assistance to: (1) Educators in the development and assessment of innovative goals and programs and (2) researchers, psychometricians, and test publishers in identifying areas for which adequate instrumentation does not exist.

Each instrument is categorized into a cell of one of the three taxonomies and is given a numerical rating and grade (good, fair, poor) on each of the following characteristics: Validity, examinee appropriateness (appropriateness for the intended examinee group), normed excellence, teaching feedback, usability, and retest potential. In addition, comments are made on the instrument's ethical propriety. (The CSE acronym for this system is VENTURE.) The first portion of the book is devoted to a discussion of the components of each rating. For example, the system generally gives highest usability ratings to instruments which may be administered to large groups in less than 20 minutes by a single observer without extensive practice.

The instruments are arranged by skill area and subskill and are alphabetically listed within each subskill. Each skill area is introduced by a description of the taxonomy against which the instruments were matched. The cognitive taxonomy is a grid of skill (such as, classifying) against content (such as, verbal-semantic). That of affective domain is three-dimensional: Affective characteristic against type of measure (such as, self-report) against type of report (such as, speculative). The interpersonal taxonomy is four-dimensional with type of relation (such as, with peers) mapped against location (such as, at home) against type of measure against type of report. The instruments are identified by name, form, age range, and the initials of the publisher (or author, in the case of unpublished tests). Indexes of tests and publishers are included.

SUBJECT AREA(S)

The subject area is the educational measurement and evaluation of nontraditional curriculums. Higher order cognitive skills are beyond specific subject-matter knowledge and are necessary for activities like problem solving. Interpersonal or social skills are those abilities needed for effective people-to-people communication and interaction. Affective skills focus on an individual's ability to respond constructively to the impact of environment.

INTENDED USERS AND BENEFICIARIES

The evaluations are expected to be of assistance to educators in the development and assessment of innovative goals and programs and to researchers, psychometricians, and test publishers in identifying areas for which adequate instrumentation does not exist. Tests for all age levels are included.

GOAL(S) OR PURPOSE(S)

The goal of the *CSE/RBS Test Evaluations* is to provide information on the quality and existence of tests in the areas of higher order cognitive, affective, and interpersonal skills.

ASSURANCES AND CLAIMS

CSE claims the test evaluations offer: (1) Conciseness, (2) the most up-to-date and complete collection, (3) educational relevance, (4) objectivity, and (5) consistency.

The taxonomies of the *CSE/RBS Test Evaluations* were generated in the following manner: The principal investigator and staff collected all the attributes of interest to the RBS program. For example, criteria for the higher order cognitive skills were: (1) The skill must be measurable, (2) the skill must be capable of being taught and learned, and (3) the skill must have intellectual and/or societal importance (as decided by RBS). An extensive search was then made for both published and experimental instruments.

Eight raters were employed, ranging in experience from graduate assistants to a Ph.D., in several fields of specialty such as psychological measurement, experimental psychology, measurement and testing, and educational research and design. All raters were trained in the VENTURE system and did preliminary ratings on a sample of tests to resolve differences in interpretation. Each instrument was rated once. However, the most important complex and subjective judgments and those judgments of which the rater was uncertain were checked by at least one other rater. Raters frequently checked procedure and rationale, and each checked consistency in his own ratings.

Individual test evaluations are the focus of the product. CSE, however, included an analysis of the aggregate of tests on each of the VENTURE evaluation criteria which gives fuller information on cell deficiencies to psychometricians and test publishers.

No study of the resource value to educators has been made, but impact studies on two similar CSE products *Preschool/Kindergarten Test Evaluations* and *Elementary School Test Evaluations* indicate that the general idea and format are useful.

CSE-ECRC PRESCHOOL/KINDERGARTEN TEST EVALUATIONS

RD 130 008

Evaluations of the most commonly used measures of school achievement

This book contains evaluations of virtually every output measure published that is generally available to educators and researchers for use in testing preschool and kindergarten students. More than 630 output measures were evaluated by measurement experts and educators using the criteria of measurement validity, examinee appropriateness, administrative usability, and normed technical excellence. The introduction to the book defines and explains the evaluation method. A poor, fair, or good rating is assigned to each of the four main criteria.

The results of the evaluation of each output measure were determined by the purpose that the measure was to serve. Specifically, each measure was classified as to its educational goal, and then its effectiveness in assessing achievement of that goal was evaluated. A wide spectrum of teachers, supervisors, and early childhood specialists was surveyed, and an exhaustive search of both the program and research literature was conducted to select goals for preschool and kindergarten education. The goals were translated into operational definitions and were classified as follows: Affective domain/personality, social skills, motivation for learning, aesthetic appreciation; intellectual domain/cognitive functioning, creativity, memory; psychomotor domain/physical coordination, subject achievement domain/arts and crafts, foreign languages, function and structure of human body, health, mathematics, music, oral language skills, readiness skills, reading and writing, religion, safety, science, and social studies. The book includes an index of goals, test names, and publishers and their addresses.

SUBJECT AREA(S)

Evaluation and educational measurement

Standardized achievement tests in all subject areas are evaluated.

INTENDED USERS AND BENEFICIARIES

Superintendents, principals, testing officers, project directors, and other preschool and kindergarten education personnel are the primary users. Researchers in the field of measurement, test publishers, libraries, and graduate students also purchase and use the books. The ultimate beneficiaries are students in either preschool (30-59 months) or kindergarten (60-72 months) and those who make decisions about education programs for these levels using information from standardized achievement test scores.

GOAL(S) OR PURPOSE(S)

The goal of the *CSE-ECRC Preschool/Kindergarten Test Evaluations* is to provide a critical and objective evaluation of published tests to improve the way tests are selected for use in evaluating preschool and kindergarten programs.

PATTERNS OF USE

The *CSE-ECRC Preschool/Kindergarten Test Evaluations* is a reference tool. Development was initiated on the product because the information contained in the book was needed as part of a systematic procedure for conducting a needs assessment. The book continues to be used as a source of tests keyed to goals which have high priority as determined by a community-based needs assessment. However, the product stands alone, and the developer has packaged the information so that it can be used by a variety of people for a variety of purposes.

Among the secondary uses of the book are: (1) Validation of test selection decisions based on information obtained from other sources, (2) selection of areas for test development by researchers and publishers' research departments, (3) graduate study in education and measurement and early childhood education, and (4) justification of test development where the book indicates that no adequate tests exist.

ASSESSMENT PROVISIONS

Assessment is not appropriate for this noninstructional product.

TIME REQUIREMENTS

Approximately 2 hours are required to read the introductory material and thoroughly examine the product. Only a few minutes are needed to look up a test or goal area.

IMPLEMENTATION PROCEDURES

No special circumstances are needed. The book is extremely easy to use. A notice of the availability of the second edition will be mailed to all purchasers of the first edition to assure that the most current information is being used.

RD 130 008

ASSURANCES AND CLAIMS

If an individual is selecting a test for a particular grade or age level to measure an instructional program's success in teaching a specified educational objective, the *Test Evaluations* book provides simple, easy-to-read, and reliable information on tests that the individual could confidently use to select the best test.

In anticipation of use by evaluation professionals, the developers have included the 25 subratings used to determine the letter grades. The user can attend only to those subratings that are relevant to the particular test selection problem.

Many school districts, particularly those with lower socioeconomic and highly ethnic neighborhoods, are under pressure from teachers and/or parents to abandon testing completely because the tests are felt to be inappropriate for their communities. If one considers that testing has two functions, pupil placement and the measurement of program effectiveness, the abolition of testing can be seen as being potentially beneficial in ending the abuses in pupil placement due to the use of inappropriate and biased tests; but such abolition would inhibit measurement of program effectiveness, thereby inhibiting program improvement and program change. This is particularly true when the test is appropriate (referenced) to the instructional program.

The *CSE-ECRC Preschool/Kindergarten Test Evaluations* clearly indicates that the tests are evaluated for program evaluation purposes; no claims are made that the evaluations are sensitive to racial, ethnic, or other minority groups for individual student placement.

CSE ELEMENTARY SCHOOL TEST EVALUATIONS

RD 130 009

Evaluations of standardized achievement tests in all elementary school subject areas

This book contains evaluations of virtually every output measure published that is generally available to educators and researchers for use in testing elementary school programs and students. More than 1,000 tests were evaluated by measurement experts and educators using the criteria of measurement validity, examinee appropriateness, administrative usability, and normed technical excellence. The introduction to the book defines and explains the evaluation method. A poor, fair, or good rating is assigned to each of the four criteria; for example, the California Language Test in spelling for the 3d grade is rated poor in measurement validity, fair in examinee appropriateness, good in administrative usability, and poor in normed technical excellence. Each measure was classified by its educational goal and evaluated for its effectiveness in assessing achievement of that goal. The measures were judged on their appropriateness to school situations, not to clinical or research problems. The tests were rated for program evaluation purposes, not for individual student diagnosis.

SUBJECT AREA(S)

Evaluation and educational measurement.

Standardized achievement tests in all elementary school subject areas are evaluated.

INTENDED USERS AND BENEFICIARIES

Superintendents, principals, testing officers, project directors, and other elementary school personnel are the primary users. Researchers in the field of measurement, test publishers, libraries, and graduate students also use the book. The ultimate beneficiaries are students in grades 1, 3, 5, and 6 and those who make decisions about elementary education programs using information from standardized achievement test scores.

GOAL(S) OR PURPOSE(S)

The goal of the *CSE Elementary School Test Evaluations* is to provide a critical and objective evaluation of published tests to improve the way tests are selected for use in the elementary schools.

PATTERNS OF USE

The *CSE Elementary School Test Evaluations* is a reference tool. Development was initiated on the product because the information contained in the book was needed as part of a systematic procedure for conducting a needs assessment. The book continues to be used as a source of tests keyed to goals which have high priority as determined by a community-based needs assessment. However, the product stands alone, and the developer has packaged the information so that it can be used by a variety of people for a variety of purposes.

Among the secondary uses of the book are: (1) Validation of test selection decisions based on information obtained from other sources, (2) selection of areas for test development by researchers and publishers' research departments, (3) graduate study in education and measurement, and (4) justification of test development where the book indicates that no adequate tests exist.

ASSESSMENT PROVISIONS

Assessment is not appropriate for this noninstructional product.

TIME REQUIREMENTS

Approximately 2 hours are required to read the introductory material and thoroughly examine the product. Only a few minutes are needed to look up a test or goal area.

IMPLEMENTATION PROCEDURES

No special facilities or training are needed. The book is extremely easy to use. A notice of the availability of the second edition will be mailed to all purchasers of the first edition to assure that the most current information is being used.

Personnel Required for Product Adoption and Implementation

No special measurement training is required to use the test evaluations. The book is designed for use by educators who do not have the training, time, or other resources to evaluate test instruments.

ASSURANCES AND CLAIMS

If an individual is selecting a test for a particular grade or age level to measure an instructional program's success in teaching a specified educational objective, the *Test Evaluations* book provides simple, easy-to-read, and reliable information on tests that the individual could confidently use to select the best test.

If an individual user had a purpose for using the test evaluations other than for program evaluation, the user might not want to rely on the four letter grades given to each test. In anticipation of such situations, the developers have included the 24 subratings used to determine the letter grades. The user can attend only to those subratings which are relevant to the particular test selection/problem or other purpose for using the information.

Many school districts, particularly those with lower socioeconomic and highly ethnic neighborhoods, are under pressure from teachers and/or parents to abandon testing completely because the tests are felt to be inappropriate for their communities. If one considers that testing has two functions, pupil placement and the measurement of program effectiveness, the abolition of testing can be seen as being potentially beneficial in ending the abuses in pupil placement due to the use of inappropriate and biased tests; but such abolition would inhibit measurement of program effectiveness, thereby inhibiting program improvement and program change. This is particularly true when the test is appropriate (referenced) to the instructional program.

The *CSE Elementary School Test Evaluations* clearly indicates that the tests are evaluated for program evaluation purposes; no claims are made that the evaluations are sensitive to racial, ethnic, or other minority groups for individual pupil placement.

CSE SECONDARY SCHOOL TEST EVALUATIONS

RD 130 010

A three-volume kit which aids school personnel in the selection of testing measurements relative to school program goals

The three-volume set of *CSE Secondary School Test Evaluations* (grades 7-8, 9-10, 11-12) is aimed at serving the evaluation functions and needs of teachers, administrators, curriculum developers, special project staff, and members of State and Federal education agencies. After conducting a needs assessment and determining that it would be necessary or desirable to assess student standing on some goal, a user may consult the introduction to one of the three volumes (corresponding to the appropriate grade level) to find the goal statement most closely matching the student's need. Then, the student consults the index of goals and finds the evaluation entries for all the tests published and available that can be construed to measure that goal.

Under the individual entries, the user will find the precise name of each instrument, a code indicating its publisher, and ratings on 39 evaluation criteria. These ratings are also summarized into a MEAN score. (MEAN is an acronym for the criteria used to evaluate the tests: measurement validity, examinee appropriateness, administrative usability, and normed technical excellence.) By scanning either the individual or summary ratings, the user can select one or more tests to measure specific goals. Next, the user would consult the index of tests to see whether the evaluations chosen are single units or subtests of larger batteries. In the latter case, the user will have to decide whether the additional information tested will be useful and make trade-offs to obtain the maximum useful information at reasonable cost.

Each of the three volumes in the series has an index of goal categories and test names, test publishers' addresses, and a list of curricular resources. The goals have been arranged under 16 major discipline areas covering most of the outcomes expected of secondary students throughout the country: Arts and crafts, driver and traffic safety, English language arts, foreign languages, health and safety, home economics, industrial arts, intellectual skills, mathematics, music personality characteristics, philosophy and religion, physical education, science, social studies, and vocation/career education.

SUBJECT AREA(S)

Evaluation and educational measurement.

Standardized achievement tests in all secondary school subject areas are evaluated.

INTENDED USERS AND BENEFICIARIES

Superintendents, principals, testing officers, project directors, and other secondary school personnel are the primary users. Researchers in the field of measurement, test publishers, libraries, and graduate students also purchase and use the book. The ultimate beneficiaries are students in grades 7-12, as well as those who make decisions about secondary education programs using information from standardized achievement test scores.

GOAL(S) OR PURPOSE(S)

The goal of the *CSE Secondary School Test Evaluations* is to provide a critical and objective evaluation of published tests to improve the way tests are selected for use in the junior and senior high schools.

PATTERNS OF USE

Development was initiated on the product because the information contained in the book was needed as part of a systematic procedure for conducting a needs assessment. The book continues to be used as a source of tests keyed to goals which have high priority as determined by a community-based needs assessment. However, the product stands alone, and the developer has packaged the information so that it can be used by a variety of people for a variety of purposes.

Among the secondary uses of the book are: (1) Validation of test selection decisions based on information obtained from other sources, (2) selection of areas for test development by researchers and publishers' research departments, (3) graduate study in education and measurement, and (4) justification of test development where the book indicates that no adequate tests exist.

ASSESSMENT PROVISIONS

Assessment is not appropriate for this noninstructional product.

TIME REQUIREMENTS

Approximately 2 hours are required to read the introductory material and thoroughly examine the product. Only a few minutes are needed to look up a test or goal area.

IMPLEMENTATION PROCEDURES

No special facilities or training are needed. The book is extremely easy to use. A notice of the availability of the second edition will be mailed to all purchasers of the first edition to assure that the most current information is being used.

Personnel Required for Product Adoption and Implementation

No special measurement training is required to use the test evaluations. The book is designed for use by educators who do not have the training, time, or other resources to evaluate test instruments.

ASSURANCES AND CLAIMS

If an individual is selecting a test for a particular grade or age level to measure an instructional program's success in teaching a specified educational objective, the test evaluations book provide simple, easy-to-read, and reliable information on tests that the individual could confidently use to select the best test.

If an individual user had a purpose for using the test evaluations other than for program evaluation, the user might not want to rely on the four letter grades given to each test. In anticipation of such situations, the developers have included the 39 subratings used to determine the letter grades. The user can attend only to those subratings which are relevant to the particular test selection/problem or other purpose for using the information.

Many school districts, particularly those with lower socioeconomic and highly ethnic neighborhoods, are under pressure from teachers and/or parents to abandon testing completely because the tests are felt to be inappropriate for their communities. If one considers that testing has two functions, pupil placement and the measurement of program effectiveness, the abolition of testing can be seen as being potentially beneficial in ending the abuses in pupil placement due to the use of inappropriate and biased tests; but such abolition would inhibit measurement of program effectiveness, thereby inhibiting program improvement and program change. This is particularly true when the test is appropriate (referenced) to the instructional program.

The *CSE Secondary School Test Evaluations* clearly indicates that the tests are evaluated for program evaluation purposes; no claims are made that the evaluations are sensitive to racial, ethnic, or other minority groups for individual pupil placement.

INFORMATION CURRENT AS OF MARCH 1975 ■

CSE ELEMENTARY SCHOOL PROGRAM PLANNING KIT

RD 130 011

Instructional planning materials for elementary school staff

The *CSE Program Planning Kit* is a set of materials to be used by an elementary school staff in order to plan an instructional program for a specified group of students once the need for such a program has been determined.

The kit contains guidebooks for planning team members (teachers and parents), for the planning coordinator (the principal or principal agent), and for the evaluation planner. In addition there are three sourcebooks, one each for a planning strategy based on available materials, objectives, and teaching models. The sourcebooks contain step-by-step procedures for planning a program as well as resources and leader instructions. The planning pad contains forms on which to record decisions and the final program plan.

The materials in the *CSE Program Planning Kit* include guidelines, techniques, and resources for selecting or developing programs to meet important educational goals. Using a previously selected goal of importance as a starting point for planning, the coordinator establishes a favorable atmosphere for planning and selects a planning team. This planning team may use commercially available materials as a basis for its program, adapting it (if necessary) to the goal, to the subject area, and to the needs of pupils and teachers in the school. Or, if such materials cannot be found, the school staff develops a program (using either a teaching model of their own choosing as the basis for the program or deriving objectives and activities for their program goal).

Team planning may occur for programs of many types. Such programs may focus on a single subject such as mathematics or English, or they may emphasize a skill such as critical thinking. They may replace an existing program or they may be an addition to the curriculum. They may involve all the pupils in one or several grades, or they may be designed only for pupils with particular characteristics.

While considering the instruction they want for their pupils, the team members plan for evaluation of that instruction. The evaluation planner guides the team in its discussion of the purpose and design of the evaluation and in its consideration of appropriate methods and measures for assessing pupil progress and program activities.

At the conclusion of the planning process, a school using the kit will have developed a written program plan which describes the instructional component, evaluation component, and management component for an educational program which can then be implemented.

SUBJECT AREA(S)

The subject areas are program planning and educational evaluation.

INTENDED USERS AND BENEFICIARIES

Elementary school principals implement the kit with teams of teachers. Teachers on the planning teams spend the most time with the materials; as an option, parents may be involved in the planning process using the kit. In some districts, district administrative or resource personnel may be involved in the kit's use.

The ultimate beneficiaries are elementary school students who will participate in well-planned instructional programs. The kit may benefit preschool and secondary students although its primary audience is the elementary school.

GOAL(S) OR PURPOSE(S)

Using the *CSE Program Planning Kit*, the principal of an elementary school should be able to write a program plan which includes: A description of the proposed instruction (i.e., program goal, objectives, activities, and schedule); the proposed management system (i.e., task/time line for program implementation and budget); and the proposed evaluation (i.e., purpose, instruments, schedule), assisted in this task by a planning team of teachers, parents, and an individual who assumes the role of evaluation planner.

The principal of an elementary school should acquire the knowledge, skills, and attitudes needed to assist teachers who are implementing a program according to a program plan and who will participate in and benefit from an evaluation of that program.

PATTERNS OF USE

Program planning as defined by the kit is different from preparing for tomorrow's class or even next week's class. It requires planning the more general, longer range structure for teaching and learning. It means figuring out the goals which pupils should achieve as the result of spending time in a program. It means describing the knowledges, skills, and attitudes that pupils will acquire. It means developing or selecting the learning activities in which pupils will engage and describing the setting and the materials with which they will work.

Programs may be of many types; they may be short or long, require a little time or a lot, focus on a single subject matter or emphasize a process utilizing the content from many subject areas, replace an existing program or be additions to the curriculum, involve all the pupils in one or several grades, or they may be designed for pupils with particular characteristics. For example, the following are all possible programs: Once-a-month assemblies whose goal is that pupils will become aware of the many forms of dance; twice-a-week small-group discussions for the purpose of helping pupils learn how to set realistic goals for themselves and plan for the achievement of these goals; an individualized reading program every day for 1 hour during which children will improve their decoding, comprehension, and study skills.

These programs are different from one another, but common to them all is the fact that they describe a coordinated and comprehensive set of activities and materials intended to help pupils achieve knowledge, skill, and/or attitude objectives.

The *Program Planning Kit* may be used as a one-shot, short-term planning effort at one grade level in a single school or as part of a more comprehensive evaluation scheme for a district. In either instance, a planning team using the kit chooses from one of three planning strategies—objectives-based, teaching models, or materials-based—and uses the materials within the kit specific to that strategy to produce their written program plan.

A forthcoming report will discuss patterns of use during the kit's national field test.

ASSESSMENT PROVISIONS

The kit focuses on a "learn-how-to-do-it" basis rather than "learn it." Assessment of the kit's success will be made based on the degree to which a planning process is implemented within a school and the existence and quality of written program plans resulting from the planning process.

TIME REQUIREMENTS

The time required for the program planning process varies according to the complexity and length of the program being planned as well as the experience of the planning team in working together and making program planning decisions. A 2-week unit may be planned in a few hours; the kit developers estimate that up to 50 hours of team time may be required to plan a semester-long program. The amount of time required of the coordinator and the evaluation planner is more difficult to estimate as it depends upon the extent to which each chooses to become involved in the planning process.

IMPLEMENTATION PROCEDURES

No special equipment or facilities are needed. The extent of organizational change required varies depending upon the degree to which the instructional staff has been previously involved in planning activities. For example, teacher release time during the day (either through the use of substitutes or early dismissal) or reimbursement for after-hours planning seems to be an important facilitator for planning efforts.

Special user considerations include the necessity for prior articulation of a goal for planning where improvement of an existing program or a new program is needed and a decision concerning the degree of nonteacher (parent) participation in the planning process.

Summary Cost Information

Cost of materials and its final format will be determined during the last half of 1975. Components of the product may be combined if cost exceeds benefit. The designated publisher is working with the developer toward the most cost-effective package.

Personnel Required for Product Adoption and Implementation

No special personnel or training is required. Time of elementary school principal and (possible released) time of two to six teachers is required for 2-50 hours. This might necessitate replacement of teachers in classrooms. Community (parent) involvement is an optional feature. Their time would be equal to or less than teacher time.

ASSURANCES AND CLAIMS

The developer believes that systematic planning of both programs and their evaluations is the best method of assuring that the offerings of the schools are addressing the needs of the communities they serve. The current emphasis on evaluation in education requires each school to account for both the content and the quality of its programs. Each of the kits in the *CSE Elementary School Evaluation Kit* series is offered to assist the schools in an important stage of this accountability process.

In particular, the *CSE Program Planning Kit* was developed with certain assumptions: (1) Schools often have need for programs planned at the local school level; (2) school personnel are capable of assuming the major responsibility for some of their own program planning. Planning skills exist or can be acquired by those within the school, supplemented by outside assistance where necessary; (3) successful school level planning requires the commitment of many people—the principal, teachers, parents, district personnel—and a division of responsibility among them; (4) there is no single correct way to do program planning—schools must find their own methods in accordance with general principles of planning, although guidance can be provided by written materials such as the CSE kit; (5) planning for the evaluation and management of instruction should occur concurrently with planning for instruction; and (6) school level program planning should not be viewed as a one-shot effort to produce a single written program plan but as part of a systematic effort to improve the quality of instruction (as with any innovation, the program planning process should be introduced with care and should become part of the normal functioning of the school).

A report will be issued during fall 1975 which will analyze the effects of the kit on school planning.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 130 012

DEVELOPMENT, DISSEMINATION, AND EVALUATION (DD&E) ASSESSMENT BATTERY

A model assessment system for compentence-based professional training

Although this assessment battery was designed for use with the Far West DD&E functional competence training program, it has a more general utility as a model assessment system for competence-based professional training programs and as a flexible and adaptable set of assessment instruments that may be employed in any competence-based curriculum whose content includes educational product development and evaluation. The assessment system is designed to aid both student and instructor in: (1) Program planning, (2) progress monitoring, and (3) exit assessment. Four types of assessment methods are employed: Competence ratings, knowledge tests, job-sample tests, and product ratings.

SUBJECT AREA(S)

The assessment system focuses primarily on the content areas of educational product development, dissemination, and evaluation. The competencies cover a broad range of levels of professionalization but are most appropriate for entry-professional (master's degree) preservice and inservice training programs. Primary attention is given to "orientation" and "familiarization" levels of knowledge and general procedural skills associated with the planning, design, development, tryout and revision, and evaluation and dissemination of educational products and programs. Much of the content has been derived from analysis of the competencies required to perform the kinds of tasks *actually assigned* to entry-level (M.A. degree) professionals. Explicitly excluded are competencies associated with educational research, systems analysis, job and task analysis, sequencing of instruction, and the management of research and development. These areas have been excluded, not because they are unimportant, but because tasks requiring these competencies are usually assigned to more experienced or advanced (e.g., doctoral level) professionals.

INTENDED USERS AND BENEFICIARIES

The DD&E assessment system may be useful to any decisionmaker (student, instructor, employer, employee) who is concerned with "personnel development"; that is, with counseling, guidance, training, job assignment, on-the-job training, cross-training, and the like, in the field of social science research and development. Although specifically targeted to the area of educational product DD&E at the professional entry level, the DD&E materials have actually been used in community colleges, baccalaureate, master's, and doctoral level programs and in a variety of inservice training applications. With some modification in content examples, the assessment system may be adapted to a wide variety of health, social, business, and industrial settings, other than those specifically concerned with education, where knowledge and skills in systematic, "knowledge-based" development of social or behavior products, programs, or systems are involved.

981

The DD&E assessment battery "model" may be of interest to anyone concenred with competence-based or performance-based education.

GOAL(S) OR PURPOSE(S)

The purpose of this assessment system is to provide students, instructors, and employers with a practical, validated means for assessing those competencies in educational product development, dissemination, and evaluation which are commonly required in the performance of tasks assigned to entry-level professionals.

PATTERNS OF USE

Concerns for costs and practical use lead the developers to a sequential, decision-oriented strategy in which less expensive devices such as self-ratings are used most extensively, but with cross-checking provided against more expensive sources of information such as knowledge tests and job samples. In the earlier stages of a competence-based training program the emphasis is primarily on program planning, guidance, and counseling. As the student progresses, the emphasis tends to shift to concerns about completion of modules, attainment of objectives, credit for attainment, and competence certification. Comparable data and sometimes identical or parallel test items and instruments may be used for both the diagnostic and assessment uses.

A student's file is "opened" by recording pertinent biographic, academic, and work-experience data from the student's application form. This may be augmented by instuctor interview data. The first structured instrument the student encounters is the DD&E diagnostic instrument (available as a Q-sort or a rating list) which consists of self-rating items which have been designed to reveal a competence profile on the three DD&E functional contexts (development, dissemination, and evaluation) and on six process skills (analyzing, planning, producing, evaluating, collecting and organizing information, and communicating). On the basis of this information taken together (employing a sequential, Bayesian, item sampling strategy), the instructor may decide to probe areas where further information is needed—perhaps because the student's selfappraisals in those areas suggest discrepancies in either being higher or lower than expected. The least expensive alternatives available are interviews, use of a second tailored Q-sort drawn from the rating item pool, or use of one or more of the module pretests. In some instances, supervisors' ratings, job samples, or product ratings may be available. However, their use in diagnostic situations would be unusual.

As students progress through the program they may encounter up to 20 end-of-module knowledge tests. The students may also produce a variety of ratable products as part of application projects. In some instances, they may have an internship where a valid job supervisor rating can be obtained. At the end of the program this cumulative file of information can be augmented by a third self-rating. Because of the flexible item sampling format, this third self-rating may be tailored to probe areas corresponding to the student's own program objectives. When relevant, supervisor or instructor ratings may also be obtained. Finally, for those students who have completed the development series, a knowledge test and a job sample (simulation) test, validated and calibrated on a representative sample of DD&E students and practitioners, are available for end-of-program assessment.

ASSESSMENT PROVISION

See "Patterns of Use."

TIME REQUIREMENTS

The DD&E diagnostic instrument is self-administering and may be completed in less than 1/2 hour. Completion of the individual module tests usually requires between 1/2 and 1 hour. The DD&E product development assessment battery (self-rating, knowledge test, and simulation test) requires approximately 4 hours.

IMPLEMENTATION PROCEDURES

All instruments in the *DD&E Assessment Battery* have been designed for self-administration. The assistance of an instructor who is familiar with the content of the *DD&E Assessment Battery* and the availability of appropriate instructional resources (e.g., those of the DD&E functional competence program) is needed to provide the student with guidance and to assess and certify attainment of competence. A manual is provided which has been designed to aid the instructor in implementing and adopting the system.

Personnel Required for Product Adoption and Implementation

One instructor who is familiar with the administration, scoring, interpretation and use of the assessment battery is required. Thorough studying of the manual, followed by self-administering and scoring each instrument, as well as administering and scoring a trial run of all the instruments for a few students will familiarize the instructor with the battery. The instructions and examples for the scoring of the knowledge test and the simulation presume that the instructor has at least modest knowledge and experience in educational product development.

ASSURANCES AND CLAIMS

Assurances

By June 1975, this product will have completed three complete cycles of development, test, and revision, involving more than 100 test subjects who were either enrolled in training programs or employed in research and development agencies located throughout the United States. The materials have also been examined and critiqued by a wide variety of trainers, employers, and other experts with regard to their content, method, utility, and validity. It has been demonstrated, in a variety of preservice and inservice settings, that the assessment system is functionally useful and that it has both validity and utility when used as directed. It is noted that the instruments are provided as *aids* for a decision process that must be inherently judgmental. The student and instructor are provided with a basic set of criterion-referenced assessment items, systematic procedures for organizing and interpreting the infromation gained from these items, validation data regarding the instruments, and instructions for adapting the system to local program requirements; a foundation can thus be established for more effective, individual decisions regarding competence attainment.

The materials do not appear to display any intended form of social bias, including ethnic or sexual sterotyping; however, the simulation does deal with subject matter which has been explicitly chosen to treat product evaluation situations where the student's sensitivity to ethnic, sexual, or other social conditions may (or may not) be manifested. Hence, there may be an opportunity for the instructor to gauge the general level of social awareness and sensitivity of students in dealing with issues regarding the appropriateness of product development and evaluation content and process.

Claims

The information gained from these items, validation data

A definitive statement of claims for this product cannot be made until field testing is completed in June 1975. Data in hand at the date of this report indicate that all instruments are practically useful discriminations among groups of subjects with known differences in levels of DD&E training and experience. Moreover, comments by test subjects, instructors, and employers have been preponderantly favorable regarding the usefulness and value of the instrument. The only major complaints have dealt with time required to take the tests and omission of desired content. (For development and validation testing purposes, the entire battery has been administered at one time. Since this will not be the case in actual operational use, there should be fewer complaints regarding time requirements.) The omission of desired content; e.g., instructional strategies for design of curriculum materials, is lamentable, but can be dealt with if users are willing to add their own content to this deliberately "open" assessment system.

MATERIALS AND EQUIPMENT

INFORMATION CURRENT AS OF MARCH 1975 ■

EVALUATION FOR PROGRAM IMPROVEMENT

RD 130 013

Training materials for school personnel concerned with providing educational opportunities for children

Evaluation for Program Improvement is one of six sets of training materials developed to increase the skill, knowledge, and understanding of school personnel in the area of instructional planning and management. The goal of this unit is to help school staff develop an understanding of the knowledge and skills necessary to identify, collect, organize, transpose, and analyze information useful in making decisions about program modification.

This unit is designed to be used in five sessions of 3 hours each. Much of the unit is based on an actual evaluation project and is presented in the form of simulation exercises involving role playing. The unit is divided into five parts. Session I, "Introduction to Program Evaluation," surveys evaluation in general and program evaluation in particular. Sessions II, III, and IV ask the participants to group themselves in teams and, through role playing, simulate the activities of an evaluation committee faced with the problems encountered on an actual evaluation project. In Session V, participants use their experience in the simulations to analyze the actual evaluation design and report. Accompanying each session is an annotated bibliography for participants who want to learn more about the area covered.

SUBJECT AREA(S)

The general subject area of this unit is instructional planning—that area of educational administration concerned with providing educational opportunities for children. More specifically, this unit is concerned with the design and implementation of instructional programs. Five separate but related topics are dealt with, one in each session:

1. Identifying the necessary and feasible decisions to be made about program modification and specifying who makes these decisions.
2. Identifying alternative courses of action in instructional management.
3. Determining which information is necessary to modify decisions.
4. Taking responsibility for or contributing to a plan for collecting, organizing and analyzing program modification information.
5. Analyzing and reporting information.

INTENDED USERS AND BENEFICIARIES

The unit is designed for school personnel responsible for deciding whether and how an instructional program should be altered to make it more effective. Specific role titles will vary from district to district, but will probably include building principals, department heads, district curriculum specialists, and teachers serving on curriculum committees. The unit may also be useful to district office administrators other than those with direct curriculum responsibilities, board of education members, parents, and students. The intended user group can best be defined by function and interest rather than by a particular role or title.

GOAL(S) OR PURPOSE(S)

The goal of this unit is to help instructional program managers develop the knowledge or skills necessary to identify, collect, organize, and analyze useful information in making decisions about program modification. A further goal is to bring about an understanding of the process of program evaluation and how it relates to specific roles in the school community.

PATTERNS OF USE

The unit consists of five self-contained sessions of 3 hours each, which can be arranged in various ways. Possibilities include:

1. Five weeks—1 session per week.
2. Five days—1 session per day.
3. One weekend—session I on Friday night, sessions II and III on Saturday, sessions IV and V on Sunday.

The order of the sessions should not be rearranged. The activities and exercises within each session have suggested time allocations so that the session may be completed in approximately 3 hours.

ASSESSMENT PROVISIONS

Much of the unit is based on an actual evaluation project presented in the form of simulation exercises involving role playing. After each simulation exercise, the participants discuss what occurred in the meeting of their evaluation team. They then look at feedback—a description of what took place in the actual evaluation project at this stage. Thus, the participants are frequently able to measure their progress and understanding against an actual situation.

TIME REQUIREMENTS

The unit consists of five sessions of 3 hours each. The coordinator and the participants can arrange the grouping of the sessions to suit their own needs. The reading assignments that are required for participation in the sessions are not included in the 15 hours, nor is any additional reading. It may take the unit coordinator 2 or 3 days to become familiar with the material prior to first use.

IMPLEMENTATION PROCEDURES

The coordinator of the unit need not be an evaluation-of-measurement specialist, but will find it helpful to read the material in the annotated bibliography prior to the workshop. Arrangements for substitutes, released time, and schedules, may be necessary; and ample time should be allowed for those to be made, probably at least a month. No special equipment is required.

Personnel Required for Product Adoption and Implementation

The unit requires a coordinator who has an active role as an organizer and, to a lesser extent, as a discussion leader. Any background in educational evaluation or any knowledge of role playing and simulation will be beneficial, but the unit is designed so that a person with minimal knowledge in these areas can lead the sessions and learn with the participants. The unit requires at least 7 participants and becomes unworkable with more than 30.

ASSURANCES AND CLAIMS

The information that has been obtained about this unit indicates that it is effective as material for training. Specialists in evaluation reviewed the material and responded favorably to six questions posed by the program staff. A total of 64 participants used all or parts of the materials in 4 field test sites. Approximately one-third were teachers and a little more than one-half were principals or other administrators; five were school counselors. Thirty-nine of these participants responded to overall judgment questions at the conclusion of the workshop. Of these, 80 percent said they had learned what they had expected from the workshop, 10 percent said they had not gotten what they expected, and 10 percent said they had mixed reactions. No one has reported that the unit is physically, psychologically, or sociologically harmful. The material does not appear to display any social, ethnic, or sexual bias or stereotyping. This assurance is derived from a careful reading of the unit. The receipt of an unsolicited field test report from Alaska indicates that the unit is easily replicable and transportable.

PUPIL-PERCEIVED NEEDS ASSESSMENT PACKAGE

A multimedia package to aid in the design and implementation of an assessment of school needs as perceived by pupils

Pupil-Perceived Needs Assessment guides administrators, teachers, and other school personnel in the systematic collection of data on how students feel about school curriculums and other school program activities. This is accomplished primarily through the design, administration, and analysis of a pupil-perceived needs indicator. The indicator is an open-ended and/or rating-scale instrument used to obtain data from students that will be useful in assisting a school or district to identify problems and establish priorities for planning or remedial efforts.

Data collection on pupil-perceived needs can be used to make the classroom teacher sensitive to the needs of pupils, to inform the school principal about problems which can be corrected at the building level, and to provide administrators with information they can use to make decisions on districtwide improvement efforts.

The product consists of five individually bound units and a supplement for sampling. A cassette tape introduces the product to the user. The first unit is directed to the person who has overall responsibility for the assessment effort. The four remaining units deal with developing an indicator to use in collecting information from pupils, administering the indicator to pupils, processing the data, and analyzing the results. Worksheets, exercises, checklists, and information sheets help participants plan and implement an assessment appropriate to their own school or district.

The product is suitable for either individual or group use. If the needs-assessment project is to be a group effort, one person should be designated project manager.

SUBJECT AREA(S)

Evaluation, administrative planning.

The product emphasizes the knowledge and skills necessary to plan, conduct, and report an assessment of school needs as perceived by pupils. These skills allow the user to develop an indicator to use in collecting information from pupils, administer the indicator to pupils, and analyze and interpret results.

INTENDED USERS AND BENEFICIARIES

The product is intended for use by superintendents, assistant superintendents, building principals, curriculum or evaluation specialists, and teachers.

GOAL(S) OR PURPOSE(S)

The goal of the product is to enable school administrators and teachers at the district or building level to plan, conduct, and report an assessment of school needs as perceived by the school pupils. It provides school staff with the knowledge and skills necessary to perform the specific tasks of such a project.

PATTERNS OF USE

The material is self-contained and requires no specially trained individual for use. It can be used by an individual or small group.

The material is divided into units paralleling the major tasks of a pupil-perceived needs-assessment project and should be used sequentially. The worksheets and information sheets in each unit allow the users to conduct their own assessment project as they work through the material.

ASSESSMENT PROVISIONS

Users are guided by checklists and information sheets in carrying out project tasks.

TIME REQUIREMENTS

The time required to study and use the materials is approximately 8 hours. The length of an assessment project will vary depending upon the scope and depth of the assessment desired by the user.

IMPLEMENTATION PROCEDURES

No specially trained individuals are required for a district to use the product, whether at the district, building, or classroom level. Although it can be used by one person working alone, it is recommended that a group of five to eight people work together. It is helpful if one member of the group is knowledgeable in interpreting evaluation data.

No external assistance of special equipment is necessary. Data can be analyzed manually or by computer, depending on the scope of the assessment and the computer service available.

RD 130 014

Summary Cost Information

If a district or school committee of five members was to conduct the project, each should have a copy of the product resulting in a total cost up to $125. Users may want to order different quantities of each of the several units in the package depending upon the number of people working on each of the tasks in their assessment project. Prices are available from the developer.

Personnel Required for Product Adoption and Implementation

The product can be used by a single individual or small group (five to eight recommended). No previous experience in pupil-perceived-needs assessment is required. The services of an evaluator can be helpful. Consultation and other services are available from the developer at various costs.

ASSURANCES AND CLAIMS

The subject of the product is the management or conduct of a pupil-perceived needs assessment project. This emphasis minimizes the chance of harm resulting from use. The developer has not received any reports of harm associated with the use of the product.

The nature of the content of the product tends to minimize the chance of social bias. Users have not brought any incidences of bias to the attention of the developer.

Preliminary evaluation of the product involving school personnel of varied training and experience from several different school districts indicates that the product can be generalized and transported. Further evaluation will address this issue in greater detail.

PUPIL ASSESSMENT SYSTEM

Instruments to assess six dimensions of elementary and junior high school student achievement, attitudinal, and behavioral development

The *Pupil Assessment System* is designed to assess six dimensions of elementary and junior high school student development: (1) Academic skills, (2) attitudes toward school and learning, (3) self-esteem, (4) coping skills, (5) emotional adjustment, and (6) achievement orientation and behavior. Use of the entire battery of questionnaires and tests allows the user to determine simultaneously these six aspects of student growth and derive a multidimensional learning needs profile for a single pupil or for groups of pupils. Such profile assessments should prove useful to school psychologists, counselors, and other school personnel knowledgeable in the administration and interpretation of psychological and educational tests, because the tests provide an economical means of detecting the pupils' academic, attitudinal, and emotional troubles.

The system is designed for two major uses: (1) As a screening device which can be administered to large groups of pupils and (2) as a prepost battery to measure, simultaneously, gains or losses on these six aspects of development, over a school year. Children identified through the *Pupil Assessment System* as having "problem" profiles can subsequently be tested and interviewed more intensively by trained school personnel. Appropriate remedial and therapeutic actions may then be recommended. In addition, if the *Teacher Assessment System* (which is also available from the center) is used in conjunction with the *Pupil Assessment System*, more effective teacher-pupil assignments can be made by matching the characteristics and needs of the pupils and teachers. For the evaluation of a student's academic skills, the developers employ the series of achievement tests which comprise McGraw-Hill's comprehensive tests of basic skills (Form S). A center-modified version of the schools sentiment index (instructional objectives exchange, University of California, Los Angeles, California) and the student sentence completion form, which was developed at the center, yield information concerning pupils' attitudes toward school and learning. In order to measure the level of self-esteem, the developers recommend the use of the Piers-Harris children's self-concept scale (counselor recordings and tests, Nashville, Tennessee), with modifications suggested by center research.

A child's skills and overall effectiveness in coping with the demands of school, parents, and others are estimated by scores on the student sentence completion form. For the assessment of emotional adjustment and mental health, the peer behavior rating system is employed. The peer behavior rating system was developed by personnel of the center beginning in 1965, and is based on the technique of having a panel of 10 of a child's peers rate the child on a series of behavioral dimensions which are relevant to different areas, e.g., school adjustment, interpersonal relations. The peer behavior rating system also yields a measure of a pupil's achievement orientation and behavior, as viewed by the pupil's age-mates.

In summary, the *Pupil Assessment System* furnishes a composite picture of the major needs and strengths of pupils across a variety of cognitive, emotional, and behavioral domains. It can be used for individual guidance and program planning. It can also be used to identify the most urgent needs of specified groups of students, such as minority children, those from high- or low-income families, those with low or high aptitudes, and those with physical handicaps.

SUBJECT AREA(S)

Subject areas are evaluation and counseling.

The *Pupil Assessment System* can be used to determine the "learning needs profile" for a student in any specific subject area, such as science, or for all subject areas.

INTENDED USERS AND BENEFICIARIES

The *Pupil Assessment System* is intended for use by school personnel specialists, school psychologists, counselors, and—to a lesser degree—teachers. Proper administration and interpretation of the *Pupil Assessment*

System profile can aid in diagnosing learning and emotional needs of students, in counseling them, and in assigning them to various remedial programs. The direct beneficiaries are the pupils themselves. However, appropriate assessment and meeting of pupils' learning needs benefit the school system and larger community. Because most of the validation research was conducted with samples of school children in grades 4 through 9, users should be particularly cautious interpreting profiles of children below the 4th grade.

GOAL(S) OR PURPOSE(S)

The purposes of the *Pupil Assessment System* are: (1) To assess the level of a student's development in academic skills, attitudes toward school and learning, self-esteem, coping skills, emotional adjustment and achievement orientation, and behavior; (2) to allow a diagnosis of the multidimensional learning needs of an individual pupil, or of a group of similar pupils; (3) to serve as a screening device which can be utilized on a large scale for the purpose of identifying pupils who may have learning or emotional difficulties which require more intensive examination; and (4) to identify students who differ in learning styles so that they may be more effectively taught.

PATTERNS OF USE

The *Pupil Assessment System* battery of tests can be administered to elementary and junior high school pupils individually or in large groups. The component instruments of the battery can be used concurrently during one session or administered separately during several sessions. All testing should be conducted by someone who is knowledgeable about educational tests and measurement.

ASSESSMENT PROVISIONS

A user's manual, available from the center in November 1975, describes procedures which the user can undertake to determine how adequately the battery of tests identifies pupils with learning and emotional difficulties in that specific school system. In addition, techniques are presented for gaging the reliability and validity of the *Pupil Assessment System* for the specific purposes of the user.

TIME REQUIREMENTS

The administration of the complete battery of tests and questionnaires requires from 2 to 5 hours, depending upon such factors as the number of achievement tests given and the grade level of the pupils. Pupils should not be tested more frequently than twice during the School year; i.e., once at the beginning of the year and once at the end of the year. It is recommended that testing be broken into three intervals of approximately equal length; e.g., 40 to 60 minutes. The amount of time required for scoring the tests will vary according to the number of tests administered and the availability of machine-scoring facilities or funds.

Users may incur additional costs if they elect to send completed tests and answer sheets to the publishers for scoring.

The *Pupil Assessment System* should be scored and interpreted by specialists in the fields of educational counseling and testing. If persons with these skills are not employed by the school, they should be brought in as consultants.

ASSURANCES AND CLAIMS

Assurances

An assurance of harmlessness of the *Pupil Assessment System* is made by the developers. Various versions of the instruments which comprise the battery have been administered to many thousands of pupils during recent years. Pupils or their parents reacted negatively to the tests in fewer than 20 instances out of more than 15,000 testings.

There is no known bias in the *Pupil Assessment System*. It is assured that the tests do not perpetuate sexism, racism, or other biases relating to religion, age, or socioeconomic stereotypes.

The system will be replicable and transportable by November 1975.

Claims

The *Pupil Assessment System* and its constituent elements were carefully developed following standard criteria for the construction and use of psychological and educational tests. Preliminary data indicate that the system possesses adequate psychometric reliability and validity. There is evidence that pupils who are experiencing learning and emotional difficulties can be identified by their "Learning Needs Profiles." Additional evidence will be provided to potential users as it becomes available.

The development of the *Pupil Assessment System* has been carried out by doctorate-level staff of the Research and Development Center who have been specifically trained in the area of psychological and educational assessment, personality development, and cognitive growth. Work on the student sentence completion form and the peer behavior rating form, both of which have gone through several versions, has been in progress since 1965. Current forms of the tests have reliabilities which range from 0.52 to 0.78, with a median value of 0.71. Correlations of the coping, emotional adjustment, and achievement orientation scores with pupil academic gains and teacher ratings of achievement and adjustment offer support to validity of these scales. A large-scale study is currently underway and will provide much additional data on the *Pupil Assessment System*. Results will be made available in fall 1975.

INFORMATION CURRENT AS OF APRIL 1975 ■

RD 130 016

HANDBOOK OF COMPREHENSIVE PLANNING IN SCHOOLS

A handbook designed to assist administrators in collecting data on the results of the instructional process rather than to test students in the traditional sense

The *Handbook of Comprehensive Planning in Schools* helps school personnel define districtwide curriculum objectives and assess specific school programs in terms of those objectives through the use of student performance indicators. The purpose of the indicators is not to test students, but rather to assist administrators in collecting data on the results of the instructional process. School personnel are then able to recommend where specific curriculum improvements should be made.

The handbook's content includes the writing of planning objectives and assigning priorities to them, developing student performance indicators, identifying the function of program structure in school district planning, collecting and using data from performance indicators for program planning, and managing the use of performance indicators in a school district.

The unique features of the handbook are that: (1) It employs a total school district focus; (2) it provides a generic approach that can be used with any curriculum program; (3) it includes instructions and checklists for the manager of the planning effort; (4) it provides for the integration of results across many curriculum areas and student ages; and (5) it focuses on the accomplishments of classrooms, buildings, and school districts.

Users work together as a five- to eight-member planning committee using the handbook's exercises and group activities. In this manner, the committee completes its planning effort as it uses the handbook under the direction of the committee leader or project manager.

SUBJECT AREA(S)

Curriculum planning.

The handbook emphasizes writing planning objectives, developing performance indicators, using the results derived from the indicators to recommend where specific curriculum improvements should be made, and managing the overall effort.

INTENDED USERS AND BENEFICIARIES

The handbook is designed for use by central office administrators, curriculum specialists, building principals, and teachers working together as a five- to eight-member planning committee.

GOAL(S) OR PURPOSE(S)

The goal of the product is to help school districts obtain student performance data that can be used in the determination of where curriculum improvements need to be made. The major objectives are: (1) To specify planning objectives, (2) to ascertain the extent to which current curriculum programs contribute to the attainment of these objectives, and (3) to recommend where curriculum improvements should be made.

PATTERNS OF USE

The handbook is designed for use by a small group, but it can be used by an individual. Users proceed sequentially through the materials, first learning how to do the suggested procedures and then actually doing them for their district's planning efforts, using worksheets provided in the materials. In this manner, the handbook facilitates the group performance of the several tasks in the planning effort.

Although the handbook is self-contained, users may choose to obtain outside consultation or help in their planning effort from the developers. School districts have used the product with and without assistance.

ASSESSMENT PROVISIONS

A series of checklists is included in the handbook so that the project manager can monitor each task in the planning effort.

TIME REQUIREMENTS

Using the handbook, it takes approximately 2 weeks to initiate the planning effort in a school district. The time period, however, may vary with the extent of the school district's comprehensive planning project.

IMPLEMENTATION PROCEDURES

No specially trained individuals are required to assist the users. However, district personnel should meet the following broad criteria if a planning project is to be carried out successfully: (1) District administrators should be committed to supporting the planning project for several years and should be willing to supply the financial support required to sustain the effort; (2) widespread staff involvement should be encouraged in planning and decisionmaking, although participation should be on a voluntary basis; and (3) those involved in the project should be made aware of the philosophy upon which comprehensive planning is based; i.e., that the people directly concerned with specific activities should share in the decisionmaking processes related to those activities.

Summary Cost Information

If a district chooses, for example, to work with a committee of six staff members, then the initial year cost for materials would be approximately $60. The district may have to pay its personnel for time spent on the planning effort. The handbook helps the district determine the cost based upon the size and duration of the effort and the rate of staff pay. Subsequent-year costs are the same as the initial-year costs. Computer processing of pupil data is estimated at less than $0.60 per pupil per year.

Personnel Required for Product Adoption and Implementation

The handbook can be used by a committee of five to eight district staff members without any previous training in comprehensive planning. Districts can choose, however, to obtain consultation and other services from the developer as they move through their planning effort. Costs for different services can be obtained from the developer.

ASSURANCES AND CLAIMS

Assurances

The handbook facilitates the involvement of several district staff members in a planning effort aimed at program improvement. This emphasis and specific procedures incorporated in the product minimize the threat of using results for personnel assessment. The developer has not received any reports of harm associated with the use of the product.

The nature of the content of the product tends to minimize the chance of social bias. Although the developer has striven for social fairness in writing the material, no formal analysis of wording or examples has been conducted.

The product has been used in medium-size urban school systems and large and small suburban districts in different curricular areas. These users were able to write planning objectives, develop indicators of student performance, and use the data resulting from the indicators to identify curriculum improvement needs without the assistance of the developer.

Claims

Using the product, school district staff can write planning objectives, develop performance indicators, and apply the data resulting from the indicators to identify curriculum improvement needs. This can be done by staff working together across grade levels and content areas. This claim is supported by data derived from formative evaluations conducted at different stages of product development.

During the period 1970-73, the product underwent careful development involving the steps of analysis and conceptualization, design, construction, pilot test and revision, and field test and final revision. Local school districts involved in pilot and field test activities provided important feedback for revision and improvement.

SCHOOL PLANNING, EVALUATION, AND COMMUNICATION SYSTEM (SPECS)

A set of processes for collecting and analyzing data describing school system outcomes, processes, and costs

School Planning, Evaluation and Communication System (SPECS) is an approach to program planning and evaluation which provides a clearly defined set of processes for collecting specific information about the many activities found in schools. It enables school systems to identify what they are trying to do for students, how they are trying to do it, related costs, and the results of these efforts.

SPECS has been designed specifically for schools in order to preserve prerogatives and responsibilities of three of the principal "actors" in a public shool district: The professional staff, the community, and the board of education. To make SPECS operational, materials have been developed to help school personnel implement five sets of activities (components). The first component consists of a systems analysis of the district to identify current activities. The second component focuses on program budgeting and cost accounting. The third component facilitates documenting outcomes, processes, and costs for each district activity. The fourth component involves the citizens of a school district in identifying its educational goals. The final component presents procedures for identifying and resolving discrepancies between district outcomes and the broad goals and expectations of the citizens.

SUBJECT AREA(S)

The subject areas are administrative systems and instructional management systems pertaining to procedures for: (1) Building a school district program structure, (2) converting to a program budget format, (3) collecting data about student outcomes, (4) community definition of a school district's goal structure, and (5) determining matches between community goals and student outcomes.

INTENDED USERS AND BENEFICIARIES

Primary users of SPECS materials and processes are the school district's professional staff. Teachers use materials to collect achievement information about students. Teachers and administrators use the materials to analyze, plan, and evaluate the curriculum. Citizens use SPECS processes indirectly by their involvement in district goal setting. Finally, boards of education use information generated by SPECS in making district policy decisions.

GOAL(S) OR PURPOSE(S)

Schools using SPECS will be able to plan, implement, evaluate, and replan programs of activities using actual performance data. SPECS provides processes for assisting schools in collecting six types of program information—outcomes, processes, and inputs (desired and actual). SPECS allows those responsible for programs to make this information explicit and use it systematically as they develop initial plans, monitor processes during implementation, evaluate results, and eventually formulate new plans for the next cycle of operations.

PATTERNS OF USE

SPECS may be used in an entire district, a single school building, or single programs within a district. The five components of activity may be used in a variety of sequences. The materials may be used outside the SPECS format in inservice courses for teachers and administrators, in university courses, or in workshops designed to explore the basic concepts supporting SPECS.

ASSESSMENT PROVISIONS

Assessment of the effectiveness of SPECS lies with the boards of education, administrators, and teachers since they are in a position to judge how much the system has improved their ability to plan and monitor program effectiveness and efficiency.

TIME REQUIREMENTS

Three to five years are required to implement all the components of SPECS. This is conditioned by the speed in which a district proceeds, the scope of its focus, and the commitment of resources to implementation.

IMPLEMENTATION PROCEDURES

Implementing SPECS requires several steps. First, a districtwide planning committee is required to determine a specific implementation strategy. Second, an implementation plan is necessary to identify time lines, needed resources, program areas for initial attention, and monitoring processes. Third, initial implementation efforts such as inservice sessions and information-sharing efforts must be started. Finally, the initial activities identified in the plan must be made operational.

RD 130 017

Summary Cost Information

Excluding computer access, a school district can initiate a 1-year plot implementation in one or two schools for approximately $3,000 as evidenced in current field test sites. The rate of expansion to other schools, the number of teachers and administrators involved, and the level of activity initiated in each of the components will affect costs in succeeding years. Computer costs will vary depending on the amount of data processed and the availability of computer services in each locality. To implement Component 2, districts should have access to a computer that can handle program cost accounting at least at the level of content areas within schools.

Personnel Required for Product Adoption and Implementation

A school district administrative staff member is required to coordinate all SPECS activities. The amount of time required by such a person is dependent on the projected scope and speed of implementation. In addition, most districts will require outside consultant help for 10-15 days the first year; thereafter, the need for such help will diminish.

ASSURANCES AND CLAIMS

SPECS is currently being field tested in 10 school districts in 6 States. Throughout the field test period, data are being collected upon which assurances and claims can be based.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Orientation materials:		To be announced		
Introductory brochure	1 per staff member			
Introductory monograph	1 per building			
Introductory slide/tape presentation	1 per building		Reusable	
Implementation manual	5-6 per district	To be announced		
Implementation booklets:		To be announced		
Component 1	1 per building			
Component 2	5-6 per district			
Component 3	1 per staff member			
Component 4	10-12 per district			
Component 5	1 per building			
Operational documents:		To be announced		
Component 3 for objectives, for processes, for outcomes	1 per teacher		Not reusable	
Summary plan	1 per teacher per program			
Summary results	1 per teacher per program

A SYSTEM FOR ASSESSING THE STAGES OF CONCERN OF INNOVATION USERS (THE S OF C DIMENSION OF THE CONCERNS-BASED ADOPTION MODEL (CBAM))

An instrument to measure an individual's concern regarding innovations

As a part of the experience of adopting innovations, it is hypothesized that innovation users have different concerns at different times. These stages of concern about the innovations have been described as one dimension of the *Concerns-Based Adoption Model* (CBAM) and are being researched at the Texas Research and Development Center. A system for assessing user concerns about an innovation has been developed as a part of this research on change. Concerns can be measured loosely through the use of an open-end questionnaire or conversation with the innovation user. More rigorous assessment of the concerns of innovation users is accomplished by use of a specially designed checklist: the *Stages of Concern Checklist* (S of C C).

The concept of concerns can be used by practicing adoption agents who are interested in diagnosing the feelings of the innovation users in order to more effectively determine needed interventions. Innovation users with different concerns about the innovation are likely to see the innovation and any interventions very differently. The S of C C would also be of use to the innovation evaluator and the change researcher.

It is hypothesized within the *Concerns-Based Adoption Model* that innovation users change developmentally with regard to their concerns about using any innovation. Their early concerns are quite self-oriented, focusing on exploration of what the consequences of using the innovation are likely to be for themselves. Later, their concerns appear to shift more toward how to adjust use of the innovation and subsequently how to maximize the collaborative impact of innovation use.

The *Stages of Concern* (S of C) assessment system allows adoption agents, evaluators, and researchers to quickly and easily measure and interpret the concerns of innovation users at any given time. This data, by itself or in combination with other data, can provide a realistic picture of the present state of innovation implementation.

SUBJECT AREA(S)

Evaluation, administration, and educational change.

The *Stages of Concern* (S of C) assessment system has been designed to be generic in character; that is, the measures can readily be used with different educational innovations and are applicable in both school and college settings, with minor adjustments to the cover page.

INTENDED USERS AND BENEFICIARIES

The *S of C Checklist* is completed by innovation users, and the resultant data are used by adoption agents to learn more about the present concerns and needs of the innovation users in order to better identify needed interventions. The *S of C Checklist* and procedures can also be used by innovation evaluators and change researchers as they study key variables of the innovation adoption process.

GOAL(S) OR PURPOSE(S)

The *Stages of Concern* assessment system has been developed in order to document the concerns that innovation users have. It is currently being used to identify the developmental nature of these stages of concern and to identify intervention strategies and tactics which are most applicable and relatable to a given stage of concern profile. This measurement, development, and research work is being done in conjunction with a comprehensive study of innovation implementation in schools and colleges in an attempt to understand the dynamics of individual innovation users and to facilitate the process of planned change.

PATTERNS OF USE

The concept of concerns can be applied after brief orientation and without a need to use sophisticated measurement systems. The concepts can be readily integrated into an adoption agent's thinking and actions. For those instances where measurement procedures are needed, an open-end concerns statement or the more rigorous *Stages of Concern Checklist* can be used.

The *Stages of Concern Checklist* consists of 35 items with an instruction/advance organizer page and 10 to 15 demographic items on the last page. The measure is completed by the innovation users at any point during their growth of use of the innovation. The resultant data are then processed by computer with development of a "concerns profile" that can be interpreted with regard to the present state of the innovation user.

ASSESSMENT PROVISIONS

The concerns can be assessed before actual use of the innovation begins, as well as during the time of actual use. The items on the checklist have been designed in such a way as to tap concerns that appear to occur more frequently at different times. Through computer processing, it is also possible to keep track of the relative intensity of the different stages.

TIME REQUIREMENTS

Approximately 15 to 20 minutes of an individual's time are required to complete the *S of C Checklist* or open-end statement. The measures are self-explanatory. By attaching self-addressed envelopes, it is possible for the measure to be mailed, thereby maintaining confidentiality and insuring prompt return. Processing of the S of C data requires keypunching and computer time. The final interpretation, however, is dependent upon the sophistication of the individual doing the interpretation and the relative complexity of the innovation being adopted.

IMPLEMENTATION PROCEDURES

For optimal analysis, the *S of C Checklist* should be processed by a computer where stage scores and S of C profiles can be analyzed. Before using the S of C measures, study, planning, training, and consultation in interpreting the data are needed, as well as study of the related publications dealing with stages of concern.

There are no special organizational requirements for use of the *Stages of Concern* assessment system. However, some new skills and knowledge are needed on the part of the personnel involved, as well as the necessary computer scoring capabilities.

The logistical requirements for use of the *S of C Checklist* are minimal; copies of the checklist and access to computer processing are required. Interpretation of the data, however, is more complicated and requires review of the related manuals, special training, and perhaps consultation.

ASSURANCES AND CLAIMS

The *S of C Checklist* and its interpretation have not been perceived by innovation users as threatening. Fewer than 1 percent of the more than 1,000 teachers and college professors involved in longitudinal studies have objected to the measure. However, at times, nonusers of an innovation have been concerned about whether they were able to effectively respond to the measure. Statistically, this has not been a problem; it is just a personal concern of noninnovation users when asked to respond to the measure.

There do not appear to be any social biases built into the measures or their interpretation. No incidences of this being an issue have been recorded during the 2 years of development and use.

As of this time, the *S of C Checklist* is still under tight control by the procedures for adopting educational innovations project staff. The relability estimates and other statistical data continue to be strong. However, a series of validity studies is still underway. The measure has not been used independent of project supervision. The project staff requires close coordination with those interested in using this measure.

The S of C measures have been developed over a 2-year period based upon an initial description and definition of the hypothesized stages of concern. The *S of C Checklist* has been developed through item generation, Q-sorting, small- and large-scale pilot testing, and use in a large-scale (N = 800) cross-sectional and longitudinal study of innovation implementation in schools and colleges. Careful and ongoing refinement of the measures and concepts with practitioner input is a regular part of the effort.

AVAILABILITY

The results of the concept of stages of concern and its measurement are examined in the following publications and reports:

Hall, G.E., and Rutherford, W.L., "Concerns of Teachers About Implementing Faculty Teaming," Paper presented at the annual meeting of the American Educational Research Association, Washington, D.C., April 2, 1975 (presently available).

***Manual for Scoring and Interpreting the Stages of Concern Checklist* (limited distribution by fall 1975).**

A series of additional research reports analyzing concerns of teachers involved in faculty teaming, and college faculty involved with instructional moduels, is being prepared. Other studies will be forthcoming during fiscal year 1976.

On a continuing basis, the *Procedures for Adopting Educational Innovations Project* updates a publication list, in annotated form, of the various publications and papers which the project staff has produced related to its studies of innovation implementation. The most up-to-date information about publications related to stages of concern will be found in the most recent copies of this publication list. Order from:

RD 130 019

A SYSTEM FOR ASSESSING THE LEVELS OF USE OF INNOVATION USERS (THE L OF U DIMENSION OF THE CONCERNS-BASED ADOPTION MODEL [CBAM])

An instrument to determine an individual's ability to identify and utilize innovative techniques

The *Levels of Use* assessment system is designed to measure the *Levels of Use* (L of U) dimension of the *Concerns-Based Adoption Model* (CBAM). This dimension describes the behaviors of individual users as they progress toward increased sophistication in use of an innovation. It is hypothesized that innovation users move from spending most of their efforts in orienting, to concentrating on managing, and finally to integrating use of an innovation. Eight discrete levels of use that an individual may demonstrate have been defined. It is hypothesized that growth in quality of use of an innovation (movement toward higher levels) by most individuals is developmental. Normally, individuals do not use an innovation for the first or even the second time as effectively and efficiently as they do the fourth or fifth time.

In order to assess the L of U of individual innovation users, a measurement system has been developed and applied in several large-scale and then cross-sectional and longitudinal studies. These studies have included samples of innovation users and nonusers in school and college settings. Measuring L of U entails conducting a semistructure interview which is tape recorded. The interview itself is sufficient to obtain a quick estimate of the overall level of use of the innovation for the individual interviewed. For a more rigorous analysis a rating procedure has been developed for analyzing the interview tapes.

The resultant data about L of U can be interpreted diagnostically by an adoption agent and can be used as the basis for selecting needed interventions. The data can also be used by change researchers and innovation evaluators as an indicator or criterion variable for success of innovation implementation. L of U data can also be used as a predictor variable for relating use of an innovation to outcomes. On an expanded level, the L of U assessment system can be tied to other variables described in the *Concerns-Based Adoption Model*, such as the concerns of innovation users, to present a more intricate and dynamic picture of the user system as its members adopt an innovation.

SUBJECT AREA(S)

Evaluation, administration, educational change.

The *Levels of Use* (L of U) assessment system is designed for use with individuals involved with any innovation. So far, researchers have used the L of U system with educational innovations in schools (e.g., team teaching) and in colleges and universities (e.g., instructional modules). The interview and the rating procedures are not innovation-specific or institution-specific; rather the procedures have been designed to be generic in nature.

INTENDED USERS AND BENEFICIARIES

Three user populations have already been actively involved with the L of U system: (1) Practicing adoption agents interested in more descriptive and quantitative information about their clients have used L of U so that they may better prescribe interventions, (2) curriculum evaluators who are interested in being able to describe how the innovation is being used in relation to summative outcomes have given consideration to the L of U scale, and (3) researchers of the change process are interested in applying the concepts and measurement procedures in other contexts and with a variety of innovations. The system has been designed to be easily applied by practitioners without extensive preparation. For the rigorous requirements of research, the system and concepts are readily accessible with additional preparation and training.

GOAL(S) OR PURPOSE(S)

The goals of the *Levels of Use* assessment system are to operationally describe and empirically measure the different ways that individual users of innovations actually perform in their work with the innovation. The *Levels of Use* dimension views innovation in terms of user behaviors and is void of affective aspects. The focus is on behaviorally describing what the innovation user actually is doing. Levels of use then serve as one dimension of the dynamics of the individual innovation user within the system adopting an innovation. The L of U assessment system can function independently as one variable of innovation implementation and change, or serve as one dimension of a multidimensional view of the change process (as described in the *Concerns-Based Adoption Model*).

PATTERNS OF USE

Once fully developed, the L of U assessment system will consist of a comprehensive training package. At the present time, one manual describes the requirements and the process for developing skill in conducting interviews of individual innovation users. An additional training manual is used to develop capability for analysis of tape-recorded interviews. For the practicing adoption agent, familiarization with the concepts and minimal training in the interview rating processes would be adequate for functioning clinically with L of U. For evaluators and researchers who are interested in applying the *Levels of Use* assessment system with a high degree of reliability, more extensive training, consultation, and practice in conducting interviews and in rating taped interviews would be required.

ASSESSMENT PROVISIONS

The key to successful use of the L of U assessment system appears to be the interviewer. Experience to date shows that the single most important prerequisite for successful L of U interviews is the ability of the interviewer to be nonthreatening and to establish a supportive conversational environment with the innovation user. A person who is overpowering or nonempathetic will not be successful in eliciting the necessary information.

Raters of L of U interviews, as well as interviewers themselves, also need to be reasonably knowledgeable of the innovation being studied. Unfamiliarity can reduce reliability, validity, and effectiveness in conducting interviews and in rating tapes.

TIME REQUIREMENTS

Training in conducting interviews to research criteria takes approximately 10 to 15 hours, while training to rate tapes takes 20 to 30 hours. Time estimates for the interviews that are planned should include the time for the actual interview and the same amount of time for listening to and rating the tape.

IMPLEMENTATION PROCEDURES

For adoption agents to use the *Levels of Use* assessment system as a clinical diagnostic tool, minimal review and training in the concepts of levels of use of the innovation is required. However, to conduct research with the measures requires additional time and resources. Portable tape recorders and equipment to listen to tapes for rating are essential, as well as practice tapes and statistical analysis systems for determining reliability.

There are no particular requirements for the clinical adoption agent who is going to use the concepts other than training to whatever degree is desired in the interview and rating procedures. For evaluation and research applications, portable tape recorders, tapes, and playback tape systems would all be required, in addition to the personnel to interview and to rate the interview tapes.

ASSURANCES AND CLAIMS

Assurances

The *Levels of Use* assessment system entails conducting tape-recorded, semistructured interviews with innovation users. The potential for harm with the *Levels of Use* assessment system is dependent upon the degree of trust that the innovation user can place in the interviewer. If the innovation user does not feel comfortable or feels that abusive use may be made of the statements given, then the innovation user will be reluctant to participate and should not be coerced into doing so. The validity of information obtained would be so suspect as to be not worth the risk. During the process of conducting over 1,000 interviews with teachers and college professors, less than 1 percent of the individuals have declined to participate in the interview activity. In cases where innovation users have expressed reluctance, no further steps were taken to involve them other than to acknowledge the legitimacy of their concerns and their right not to participate.

To date, there has been no indication of any built-in injustices or other biases in the L of U system. Again, the potential for bias is in the human element. The personnel selected to do the interviews and use the resultant information rather than the concepts and procedures that have been developed are the risks.

At the time of this writing, in the research and development phase, the *Levels of Use* assessment system has not been used independently by researchers other than those within the project. Therefore, statements of replicability and transportability are projections based upon limited experiences; others have not had sufficient experience with the concepts to testify to its effectiveness. However, no particular difficulties are anticipated.

Claims

Within the research project, a cadre of eight staff members have been trained to conduct L of U interviews, and eight other persons, ranging in formal education from 2 years of college through masters degrees, have been trained reliably to rate the taped interviews.

The *Levels of Use* assessment system has been developed through 2-1/2 years of work, beginning with generation of items, utilizing a Q-sort process, conducting small-scale field studies, recycling with large-scale, cross-sectional studies, and then extending the large-scale, cross-sectional study into a longitudinal study. The operational definitions of the levels have been through four major revisions based upon clinical experience and the process of conducting interviews and rating tapes. At this point, the operational definitions and the interview and rating procedures are reasonably well refined, developed, and describable.

INFORMATION CURRENT AS OF APRIL 1975 ■

RD 130 020

TWO INSTRUMENTS FOR DIAGNOSING USER SYSTEM READINESS FOR INNOVATIVE ADOPTION

Two checklists for use by educational change agents attempting to measure an organization's potential for change

Two "Trouble Shooting" Checklists (TSC's) have been developed to assist agents and administrators of educational change in their assessment of organizational variables which predict an institution's potential for successfully adopting innovations. Each checklist consists of 100 descriptive statements to be rated on a one to five Likert-type scale. These 100 items are random and can be sorted into scales which are descriptive of particular organizational variables (e.g., communications, characteristics of administrators). The items are based on extensive literature searches, interviews with change agents, and change agent responses to open-ended questionnaires. One checklist is designed for use in higher educational settings, while the other checklist is intended for use in school-based settings.

The TSC's are predictive in nature and focus on the institution as a whole. Although the TSC's identify behaviors of individuals or subgroups of individuals within the institution, an overall institutional profile is the true target. This profile is predictive: it gives a sign to the change agent to go ahead, slow down, or avoid an institution entirely. The TSC's are also diagnostic in that the profile points out both the stronger and weaker aspects of the institution.

All forms of the TSC identify for the administrator or the change agent both the ideal and unacceptable organizational variables related to the adoption and implementation of innovations. In order to make such an assessment, the "Trouble Shooting" Checklists have been based on the assumption that the following organizational dimensions are crucial: The general organizational structure of the institution; the descriptive characteristics of its members; the organizational climate; personality, leadership styles, and concerns of its members; the nature of communications which occur both within and without the institution; the levels at which previous innovations have been used; and the personality and social characteristics of the students. In addition, the school-based form focuses on outside community variables as well as those variables associated with the central school district office.

SUBJECT AREA(S)

Evaluation, scales, school administration, educational change.

The 100 items of the higher educational-based "Trouble-Shooting" Checklist (TSC) are random and can be categorized into the following distinct scales: (1) Organizational Climate, (2) Organizational Staff, (3) Communication, (4) Innovative Experience, and (5) Students.

The 100 items of the school-based TSC are randomized and can be sorted into 7 distinct scales: (1) School-Based Staff, (2) Communications, (3) Innovative Experience, (4) Central Administration, (5) School/Community Relations, (6) Organizational Climate, and (7) Students.

INTENDED USERS AND BENEFICIARIES

The main objective of the TSC's is to assist educational change agents in predicting the chances of successfully helping an institution adopt an innovation. The TSC's give order and predictive meaning to information gathered from otherwise unknown institutional situations. Although the instruments were originally designed for internal and external change agents, they could be of use to any member of an organization interested in adopting innovations. Because the items can be sorted into scales, the instruments allow the user to pinpoint problem areas within an organization. The instruments may also be completed by several members of one organization in order to identify problem areas on which all members of an organization agree.

GOAL(S) OR PURPOSE(S)

The TSC's are designed to aid educational change agents and administrators at all educational levels in difficult decisions concerning funding for institutions desiring to adopt innovations. It is hoped that these instruments will provide objective information upon which decisions can be based by providing a means to assess whether an institution can be expected to normally progress in its levels of use and stages of concern with respect to the adoption of innovations. In previous reviews of the literature, no similar, psychometrically formatted and easily scorable instrument focusing on the potential for successful innovation adoption has been located. Both the literature and the great number of requests which have been received indicate a marked need for such instruments.

RD 130 020

PATTERNS OF USE

The 100 items in the higher educational-based TSC are randomized and can be divided into 5 scales. The 100 items in the school-based TSC are randomized and can be divided into 7 scales. Detailed instructions for scoring the instruments are included with each instrument. Keys are given listing the randomized numbers for each of the scales. The scores are norm referenced for both scale scores and total scores.

ASSESSMENT PROVISIONS

A validity coefficient will be determined by correlating external change agents' subjective ratings of selected institutions with a second group of internal change agent and faculty TSC ratings. However, before this validity coefficient is computed, a comparison will be made between the ratings of the internal change agent group members (who may have higher status due to the fact that they are in a position to bring about change) and the faculty group members. This comparison will be made to check for the contaminating effects of a higher status TSC respondent giving more favorable ratings for their institution. If these two groups do differ significantly, two separate coefficients will be recorded.

TIME REQUIREMENTS

The TSC's are quickly scored and easily completed (30 minutes).

IMPLEMENTATION PROCEDURES

The TSC's are easily used, requiring only that the user be sensitive to the organizational characteristics and dynamics which the TSC's address. The user could be a change agent, administrator concerned with change, or even teachers concerned with identifying variables which might aid or slow down the change process.

MATERIALS AND EQUIPMENT

The instruments are available at the address listed below for the price of $1.50 per instrument.

ASSURANCES AND CLAIMS

The instruments have been used by change agents and teachers in two separate-item analyses studies, and a norming and validation study. The instruments have also been examined for clarity by organizational development specialists, examined for ethnic bias by minority group member research associates, and examined for sexual bias by female research associates investigating the adoption and implementation of educational innovations.

INFORMATION CURRENT AS OF APRIL 1975 ■

AN ADMINISTRATOR'S HANDBOOK ON CURRICULUM EVALUATION

RD 130 021

A handbook to assist school district administrators in their efforts to evaluate pilot and ongoing programs of management direction with text, examples, and worksheets for a model school district evaluation program

The *Administrator's Handbook on Curriculum Evaluation* is designed to assist school district administrators in their efforts to evaluate both pilot and ongoing programs. The product enables administrators to direct a sound curriculum evaluation without requiring special training in statistics and experimental design. The handbook provides practical assistance in implementing a curriculum evaluation that is tailored to a particular school programs' goals and objectives.

The handbook is divided into three sections or books. Book I assists local school administrators in the supervision of preliminary evaluation activities, such as defining the evaluation purpose and specifying the evaluation methodology. Book II shows how data can be reduced into an organized and manageable form which can be easily analyzed and interpreted in terms of the purpose of the evaluation. Book III assists the person responsible for coordinating and monitoring the effective implementation of the evaluation project. Each book contains user management directions, text, examples, worksheets, and information sheets for application of the material to the district's evaluation project.

The handbook is suitable for either individual or group use. If the evaluation project is to be a group effort, one person should be designated project manager.

SUBJECT AREA(S)

Evaluation, administration, and curriculum planning.

The handbook emphasizes guiding an administrator through the activities necessary to evaluate a curriculum program. Major topics covered are: (1) Defining the evaluation purpose, (2) specifying the methodology, (3) collecting appropriate data, (4) analyzing data, (5) drawing conclusions and recommendations, and (6) documenting the evaluation.

INTENDED USERS AND BENEFICIARIES

The product is intended primarily for administrators responsible for program evaluation, including superintendents, assistant superintendents, building principals, and curriculum supervisors. Teachers and evaluation specialists may also find it helpful.

GOAL(S) OR PURPOSE(S)

The goal of the product is to help school administrators obtain evaluations of curriculum programs that are directed at the questions they want answered. This is accomplished by providing a process for defining the purpose of the evaluation and specifying evaluation procedures that will result in the purpose being served. Evaluation procedures and results are tied to the decision and questions facing the administrator.

PATTERNS OF USE

The material is self-contained and requires no specially trained individual for use. It can be used by a single school administrator or a small administrative team.

The material is divided into units paralleling the major tasks of an evaluation project and should be used sequentially. The worksheets and information sheets in each unit allow district administrators to conduct their evaluation project as they work through the material.

ASSESSMENT PROVISIONS

Users are guided by checklists and information sheets in carrying out the project's major tasks.

TIME REQUIREMENTS

The time required to study and use the materials is approximately 8 hours. The length of an entire evaluation project will vary depending upon the program being evaluated by the school district and the evaluation procedures specified.

IMPLEMENTATION PROCEDURES

No specially trained individuals are required for a district to use the product. However, in cases where project staff have no experience in evaluation design and statistics, the technical assistance of an evaluator would be helpful though not necessary.

In conducting an evaluation project, school district administrators should be committed to implementing, supporting, and funding the project for the required period of time.

Summary Cost Information

Since the product is still under development no price has been fixed. Current usage is restricted to field-test sites.

Personnel Required for Product Adoption and Implementation

The product can be used by a single administrator or small group of three to seven district staff members without any previous training in curriculum evaluation. The assistance of an experienced evaluator can be helpful. Consultation and other services are available from the developer. Cost for these services can be obtained from the developer.

ASSURANCES AND CLAIMS

The subject of the product is the management or conduct of a curriculum evaluation project. This emphasis minimizes the chance of harm resulting from use. The developer has not received any reports of harm associated with the use of the product.

The nature of the content of the product tends to minimize the chance of social bias. Although early product formative evaluation activities have not addressed this issue, later product evaluation will.

The pilot test of the prototype involved school personnel of varied training and experience. Later formative evaluation will involve different school districts and varied personnel to help verify that the product is transportable and the results are capable of generalization.

COMMUNITY PERCEIVED NEEDS ASSESSMENT

A step-by-step guide for administrators who wish to collect data about community concerns and perceptions of the school and individual school programs

Community-Perceived Needs Assessment is a "hands-on" guide for administrators who want to collect data about community concerns, feelings, and perceptions of school activities or specific school programs. With this information, the administrator can then make specific decisions about school district goals, priorities, and programs. Much of the need for such an assessment project stems from current legislation that encourages school districts to actively involve community groups in educational decisionmaking.

The product covers seven tasks that must be completed in the assessment process. These tasks are: (1) Defining the purpose of a *Community-Perceived Needs Assessment* project in a local school district; (2) specifying the data collection method or methods, the number of respondents, and sampling techniques; (3) selecting specific respondents; (4) developing data collection materials; (5) collecting data; (6) processing and analyzing data; and (7) drawing conclusions and preparing a report.

Instructional materials are composed of three individually bound volumes that include worksheets, exercises, checklists, and planning sheets for each task. The planning sheets and checklists help the users apply the materials to the local school district needs assessment project. The guide is designed so that users can branch to the specific data collection method (mail questionnaire, interview, or group meeting) that best suits their own project goals and best reflects issues relevant to the local community. Included in the package is an optional supplement on sampling to help users draw a sample of the community.

The product is suitable for either individual or group use. If the needs assessment project is to be a group effort, one person should be designated project manager.

SUBJECT AREA(S)

Planning and administration.

The product emphasizes the knowledge and skills necessary to plan, conduct, and report an assessment of school needs as perceived by the school community. These skills allow the user to define the purpose of a community assessment project in a local school district; specify the data collection method or methods, the number of respondents, and sampling techniques; select specific respondents; develop data collection materials; collect data; process and analyze data; and draw conclusions and prepare a report.

INTENDED USERS AND BENEFICIARIES

The product is intended for use by superintendents, other central office administrators, and building principals. Parents and other members of the community may also be included in the needs assessment effort.

GOAL(S) OR PURPOSE(S)

The goal of the product is to enable school administrators at the district or building level to plan, conduct, and report an assessment of school needs as perceived by the school community. It provides school staff with the knowledge and skills necessary to perform the specific tasks of such a project.

PATTERNS OF USE

The material is self-contained and requires no specially trained individual. Units of instruction are sequenced to parallel the tasks of a *Community-Perceived Needs Assessment* project and should be used sequentially as work on the project progresses. Although the product is self-contained, users may choose to obtain outside consultation or help in their needs assessment effort from the developer.

ASSESSMENT PROVISIONS

A series of checklists is provided to help users monitor each task in their needs assessment project.

TIME REQUIREMENTS

Users will need approximately 12 hours to work through the materials. The community assessment project will vary in length depending upon the scope and depth of the assessment effort the school district chooses to conduct.

IMPLEMENTATION PROCEDURES

No specially trained individuals are required for a school or district to use the product. It is recommended, however, that one person manage the *Community-Perceived Needs Assessment* project and the use of the materials. The entire project staff can be drawn from the district and only auxiliary services or resources normally available in a district are required.

RD 130 022

Summary Cost Information

Since the product is still under development, no price has been fixed. Current usage is restricted to field test sites.

Personnel Required for Product Adoption and Implementation

The product can be used by a single administrator or small groups of district staff without any previous training in community needs assessment. Consultation and other services are available from the developer at various costs.

ASSURANCES AND CLAIMS

The subject of the product is the management or conduct of a *Community-Perceived Needs Assessment* project. This emphasis minimizes the chance of harm resulting from use. The developer has not received any reports of harm associated with the use of the product.

The nature of the content of the product tends to minimize the chance of social bias. Although early product formative evaluation activities have not addressed this issue, later product evaluation will.

The pilot test of the prototype involved school personnel of varied training and experience. Later formative evaluation will involve different school districts and varied personnel to help verify that results can be generalized and transported.

EVALUATING SCHOOL PERSONNEL TODAY

RD 130 023

A review of the literature on evaluation stored in the ERIC system

This document, an evaluation of school personnel, is based on a review of the literature on evaluation in the Educational Resources Information Center (ERIC) system. Emphasis is placed on the evaluation of school administrators, teacher evaluation by students, and the teacher's role in evaluation. A 23-item bibliography is included.

SUBJECT AREA(S)

Subject areas concern evaluation of school personnel, including evaluation of administrators, student evaluation of teachers, and evaluation methods.

INTENDED USERS AND BENEFICIARIES

The intended users of this paper are practicing school personnel, especially administrators and those responsible for the evaluation of administrators.

GOAL(S) OR PURPOSE(S)

The purpose of this paper is to provide an overview of trends in the evaluation of school administrators and teachers.

MODEL TRAINING PROGRAM IN QUALITATIVE EDUCATIONAL EVALUATION

An introduction to the basics of educational evaluation

The *Model Training Program in Qualitative Educational Evaluation* provides a reader with the basics of educational evaluation. The core of this workbook/textbook consists of short modules on various aspects of evaluation, ranging from the purposes evaluation serves to the costs of evaluating. Throughout the text, realistic problems illustrate the author's points. While complete solutions are given for some of the problems, readers are allowed to work out their own solutions to other problems.

Thorough study of the *Model Training Program* should assist the reader in setting up basic designs for most kinds of evaluation in most educational areas. Many of the institutional and technical difficulties that arise from evaluation designs are covered in the text. The theme of the book is qualitative educational evaluation. Material on the quantitative and statistical components of evaluation are readily available from other sources.

This workbook/textbook was designed for advanced undergraduate and graduate students. Several sections devoted to self-assessment help readers identify the skills educational evaluators need and the jobs available in this field. Finally, an annotated bibliography has been provided to aid students' further investigation of the subject.

SUBJECT AREA(S)

The subject area involves qualitative evaluation.

INTENDED USERS AND BENEFICIARIES

The text will be of use to graduate and advanced undergraduate students. Also, independent readers, such as school personnel, legislative assistants, and staff of state departments of education, can increase their understanding of and facility in evaluation with the book.

GOAL(S) OR PURPOSE(S)

The goal of this product is to put the user in a position to create the basic design for most types of evaluation and to handle the institutional and technical difficulties resulting from the design.

PATTERNS OF USE

Normally, the text would be used in an introductory graduate course in educational evaluation, collaterally with courses in statistics, tests, and measurements. The material cannot easily be compressed into a one-quarter graduate seminar. A semester, two-quarter, or full-year course or intensive summer workshop would be more appropriate. (In terms of class hours, 30 hours is too short; 60 would be more appropriate if a reasonable selection of the bibliographical references were available.)

SCHOOL DISTRICT PLANNING GUIDE FOR CHANGE

A kit designed to lead a curriculum planning committee through the steps required to plan curriculum improvement

The *School District Planning Guide for Change* guides school administrators and teachers in planning curriculum improvement. It provides them with strategies for identifying the student-related factors motivating curricular improvement; specifying desired characteristics of a new or modified curriculum program; and searching for alternative student learning materials, administrative and staff development opportunities, and methods of allocating resources. Use of the guide can help prevent an unclear, hasty, or narrow assessment of student needs and current practice; premature or inappropriate choice of a new program; and difficulty in securing support for curriculum change.

The product is designed for use by a curriculum planning committee made up of central office administrators, curriculum coordinators, principals, and teachers. One member is responsible for planning, organizing, and monitoring the group activities. Content is divided into four units. The first unit helps users recommend the direction for curriculum improvement; the second helps them specify their improvement requirements; the third shows them how to plan and conduct a search for appropriate student learning materials, administrative and staff development opportunities, and methods of resource allocation; and the fourth assists users in reporting their decisions and findings. There is also a unit for the individual who is to manage the planning effort. These five units form Book 1.

Book 2 is a resource manual containing sources of information which can be consulted by users in their search for program alternatives. Users read the text, analyze examples, work through the practice exercises, and record their planning decisions on cumulative information sheets. Worksheets and information sheets have direct application to curriculum improvement in their own school district. Branching is included for those users who desire additional examples, who wish to skip certain tasks not related to their immediate project, or who wish to review supplementary materials.

SUBJECT AREA(S)

Planning and administration.

The product emphasizes helping school administrators plan curriculum improvement. This involves determining desired student outcomes, specifying characteristics for new or modified programs, and searching for alternative means of improving programs.

INTENDED USERS AND BENEFICIARIES

To make the best use of the guide, the district should encourage the participation of representative individuals and groups in the planning process. Users might include central office administrators, curriculum coordinators, principals, and teachers.

GOAL(S) OR PURPOSE(S)

The goal of the product is to help school districts plan curriculum improvement. This is accomplished by helping districts: (1) To define desired student performance outcomes, (2) to determine needed improvements in curriculum and instruction, (3) to locate alternatives to current practice, and (4) to document reasons for planned improvements.

PATTERNS OF USE

Although it is recommended that the guide be used in a group setting, the material is suitable for individual use. It is self-contained and requires no specially trained individual for use. The developers can, however, provide consultation or assistance in curriculum planning and the use of the package if a district so desires.

ASSESSMENT PROVISIONS

Users record their planning decisions on cumulative information sheets. Checklists and guidelines assist the project manager in monitoring the planning effort.

TIME REQUIREMENTS

The product requires approximately 3 days to work through. The total time required for the planning effort varies according to the amount of time devoted to conducting a search for alternative programs.

IMPLEMENTATION PROCEDURES

The product requires no specially trained individuals or other resources. However, school districts must be willing to allocate a moderate amount of staff time for planning purposes.

RD 130 025

Summary Cost Information

Since the product is still under development, no price has been fixed. Current usage is restricted to field test sites.

Personnel Required for Product Adoption and Implementation

The product can be used by a single administrator or small group of three to seven district staff members without any previous training in curriculum planning. Consultation and other services can be obtained from the developer at various costs.

ASSURANCES AND CLAIMS

The subject of the product is the systematic planning of curriculum improvement. This emphasis minimizes the chance of harm resulting from use. The developer has not received any reports of harm associated with the use of the product.

The nature of the content of the product tends to minimize the chance of social bias. Although early product formative evaluation activities have not addressed this issue, later product evaluation will.

The pilot test of the prototype involved school personnel of varied training and experience. Later formative evaluation will involve different school districts and varied personnel to help verify the generalization of results and transportability.

A RADICAL AND REGRESSIVE SOLUTION TO THE PROBLEM OF EVALUATION

A review of two major advances in preschool strategy, which proposes another evaluation approach

This paper reviews two major advances in preschool evaluation strategy that developed as a result of trying to evaluate Head Start. It proposes another evaluation approach. The first advance in evaluation procedure was to conceive educational objectives in terms of processes rather than products; the second was to recognize the importance of comprehensiveness by extending evaluation content to include affective and social as well as cognitive processes. The alternative plan proposed in this report entails systematic and comprehensive evaluation of the child's school environment, to be followed by a theoretical analysis of the potential impact of school experiences. This approach represents a shift in emphasis from the assessment of impact on children to the assessment of the antecedent condition, the classroom environment.

SUBJECT AREA(S)

Subjects discussed in this paper include: (1) Evaluation needs and evaluation methods, (2) classroom environment, (3) early childhood education and educational objectives, (4) classroom observation techniques, and (5) classroom research.

INTENDED USERS AND BENEFICIARIES

This paper outlines some fresh approaches to evaluation for teachers, administrators, and consultants involved in planning and evaluating early childhood programs.

GOAL(S) OR PURPOSE(S)

This paper examines current practices in the evaluation and assessment of early childhood programs and suggests alternative evaluation strategies.

ACADEMIC AND SOCIAL BEHAVIOR ASSESSMENT KIT

A system which allows relatively untrained personnel to systematically assess student performance

The *Academic and Social Behavior Assessment Kit* was developed at the Experimental Education Unit in an effort to provide an assessment tool which would meet the following requirements: (1) Systematically assess performance levels in specific skills areas, (2) be administered by untrained personnel, (3) provide relevant information for lesson planning, (4) be used for continuous measurement of performance, (5) not require long periods of time for administration, and (6) individual probes in selected skill areas be used separately.

The kit is efficient and economical in terms of the time required for assessment, the cost of testing materials, and the ease of administration. No special training is required to follow the procedures described in the directions. The kit was designed to be used to pinpoint academic and social deficits in relation to peer skills levels by administering 1-minute timed probes in the preacademic and academic skills areas of reading, mathematics, and writing, and to monitor a pupil's educational advancement in these areas.

There are two parts to the Academic Assessment. The first is a packet of 5- by 8-inch screening probes which are given untimed. These probes correspond numerically to the 8 1/2- by 11-inch 1-minute timed probes. The screening probes can save examiner time by eliminating the need to give some of the 1-minute probes on skills the pupil already possesses.

The second part consists of 8 1/2- by 11-inch, 1-minute timed probes. When selected by the screening instrument, these probes are given once a day for 5 consecutive days. Research has shown that performance rates vary from day to day, so rates taken over a 5-day period give a more accurate picture of a pupil's abilities. These rates should be compared to "average" peer performance rates on the same probes in order to establish goals or aims for remediation of those skills where the performance rates are below peer rates. Administration of the screening probes takes approximately 20 minutes. Administration of the 5-day timed probes will vary with the number of probes selected.

The Social Behavior Assessment is also taken over a 5-day period. Instructions are provided for pinpointing inappropriate and appropriate behaviors for observation during a specific time period during the schoolday. A 5-day record sheet is also provided for recording observations.

The screening probes and 8 1/2- by 11-inch color probes are laminated for repeated use. The other 8 1/2- by 11-inch probes and data collection sheets are printed on index paper to be used as duplication masters.

SUBJECT AREA(S)

The first 21 probes are preacademic probes which cover: Alphabet and number recall; matching number to set; number sequencing; matching (symbols, letters, and groups); auditory and visual discrimination of letters and words; and fine motor skills (tracing, drawing between lines, and copying).

Academic probes 22 through 40 cover number and letter recognition, phonics, printing, and cursive writing skills, oral reading rate, and basic mathematics skills through division.

INTENDED USERS AND BENEFICIARIES

This assessment kit is designed to be used by teachers, teacher's aides, or other school personnel (e.g., counselors, psychologists) in the classroom. It may also be administered by a cross-age tutor or a volunteer parent. The kit is intended to be used with students, regardless of chronological age, who possess the required entry skills. The preacademic and academic probes are particularly appropriate for average pupils and pupils with moderate handicaps or specific learning disabilities.

There are certain pupil entry behaviors required for academic assessment. The pupil must be able to communicate with the examiner, understand the concepts of same and different, use a pencil or grease pencil, and point.

GOAL(S) OR PURPOSE(S)

The purpose of the kit is to identify precisely each child's skill strengths and deficits in both academic and social behaviors and to monitor progress in these areas.

PATTERNS OF USE

Probes for particular skill areas, such as addition facts, may be given at frequent intervals (e.g., every week) to assess the effectiveness of specific teaching procedures or materials. Probes may also be given at quarterly intervals to summarize a pupil's progress.

ASSESSMENT PROVISIONS

The screening probes for the academic assessment battery include 3 to 4 problems for each of the 40 academic assessment battery probes. The screening probes indicate whether the pupil has the skills necessary for administration of the academic assessment battery and, if so, which academic probes should be given.

A progress report data sheet is included for recording scores obtained on repeated administrations of academic probes and provides an overview of each pupil's individual progress.

A collection of peer data is recommended in establishing academic objectives for the student, which are relevant to the particular classroom setting. A data analysis sheet includes a column for peer scores as well as referred pupil scores.

Definitions of the types of errors are printed on the back of each probe sheet. An error analysis sheet is provided for noting, for both the referred pupil and peer, the type of errors which occurred, the frequency of their occurrence, and omissions. The error analysis is to be completed for each academic assessment probe administered.

TIME REQUIREMENTS

The initial screening requires from 10 to 20 minutes, depending on examiner knowledge of the child's abilities and limitations. For example, if the pupil is in a 1st-grade classroom, there would be no need to present the multiplication and division probes, thus reducing the testing time. The timed academic assessment probes which are to be given for 3 to 5 consecutive days will require varying amounts of time depending on the total number of probes which are to be given. They are selected through use of the screening tool. Social data may be taken during a certain class period, if the frequency of occurrence is high for the pinpointed behaviors. It should be taken for the entire day if the behaviors occur infrequently.

IMPLEMENTATION PROCEDURES

The screening probes included are ready for immediate use. However, all other materials, including data summary sheets and instructions for each 1-minute probe, need to be duplicated. These pages of the kit are intended to serve as master copies for whatever copying and duplicating methods (e.g., thermofax/ditto or electrostencil/mimeo) are available to the user.

Personnel Required for Product Adoption and Implementation

The oral preacademic and academic screening probes and timed probes must be given individually. The written probes may be given by one examiner to a group of pupils at a time. Objective instructions for administration, scoring, and error analysis are given and can be followed by teacher aides, volunteers, or other paraprofessionals as well as teachers.

ASSURANCES AND CLAIMS

The kit has been used with approximately 50 pupils at the Experimental Education Unit. It has been used for intake assessment and quarterly monitoring of pupils' progress for 1 to 2 years for these pupils. Initial analysis of the data obtained indicated that the kit provided information relevant to program planning (areas of pupil strengths and weaknesses) and to progress and return placement of pupils to public school programs.

The kit is currently in use in the following public school settings: Tacoma, Washington, program for the severely handicapped; Vancouver, British Columbia, Canada, University of British Columbia Special Education Department; Boise, Idaho, Learning Disabilities Project; Belgrade, Montana, Montana Regional Services. There are no indications of harmful effects. There are no forms of social bias in the kit. The general instructions suggest assessment of peer performance for comparison in order to set goals and objectives in planning remedial programs. However, after aims have been established, progress checks with the kit are compared only to the pupil's own baseline performance, and progress is assessed on this basis.

Data and feedback from users of the kit will be collected to determine the kit's usefulness in terms of assessing pupil strengths and deficits relevant to public school classroom functioning and to make revisions if necessary. Performance data will be used to establish normative performance ranges for each academic probe and will be provided to users of the kit for reference.

ASSESSMENT OF STUDENT ATTITUDES TOWARD LEARNING ENVIRONMENTS SCALE (ASA)

An instrument measuring secondary students' attitudes toward a variety of traditional and nontraditional learning environments

This product was designed to assess student attitudes toward various aspects of learning environments. The initial impetus for its development was the need for an evaluation tool in an experimental career education project. This need for a well-documented instrument which could measure student attitudes toward a variety of traditional and nontraditional learning environments could not be met with existing products. The *Assessment of Student Attitudes toward Learning Environments* (ASA) was developed to meet this perceived measurement need. The content was designed for secondary school students.

The ASA is based on the Shaw and Wright concept of attitudes as relatively enduring systems of covert, implicit, affective, and evaluative reactions which reflect learned concepts or beliefs about characteristics of social objects or classes of social objects. The measurement strategy is based upon Likert's modification of the Thurstone technique. Items are presented to the subject group for responsive rating on a five-point scale.

The ASA consists of 26 items; each depicts a hypothetical student attitude relevant to learning environments. Subjects are asked to rate their agreement with the expressed attitude on a scale from strongly agree to strongly disagree. Items are evenly distributed with regard to negative or positive directionality. Items are divided into four subscales: Attitude toward education in general, attitude toward school curriculum, attitude toward school resources, and attitude toward school counseling. The ASA yields an overall score plus these four subscores.

This product may be utilized by school administrators, evaluators, counselors, or teachers to determine student attitudes toward the elements of the learning environment listed. Uses include diagnosis of existing attitudes, assessment of change over time, and determination of attitudinal effects related to educational programs. The implementer's function is to administer the instrument, tabulate scores, and interpret results. Students complete the instrument and should be encouraged to participate in its interpretation.

SUBJECT AREA(S)

Evaluation. Secondary school student attitudes.

INTENDED USERS

Secondary school administrators, evaluators, counselors, and teachers.

GOAL(S) OR PURPOSE(S)

To assess student attitudes toward traditional or nontraditional secondary school programs and components.

PATTERNS OF USE

Can be used as one-time assessment for diagnostic purposes or prepost assessment of attitudinal change.

ASSESSMENT PROVISIONS

The product is an assessment instrument.

TIME REQUIREMENTS

The product requires 15-20 minutes for each administration.

IMPLEMENTATION PROCEDURES

The product requires no special equipment or facilities and may be administered on an individual or group basis.

Personnel Required for Product Adoption and Implementation

Prepublication copies of instrument are available from developers at a nominal cost. Costs of product after publication have not been determined. Existing personnel can be used to administer the ASA.

ASSURANCES AND CLAIMS

Assurances

The ASA has been carefully examined to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. The product is fully transportable. The replicability of psychometric qualities is currently under study. Use of the ASA has not resulted in any observed harmful effects.

Claims

Three claims are asserted for the ASA: (1) The ASA is a reliable instrument, (2) the ASA is a valid instrument, and (3) the ASA is an instrument which is sensitive to the detection of differential changes in student attitudes.

Each of the claims is documented below. Backup documentation is provided in "The Assessment of Student Attitudes Toward Learning Environments," a paper presented at the 1975 annual meeting of the American Educational Research Association.

The ASA is a reliable instrument. The reliability of the ASA was assessed by determining its internal consistency in each of its developmental forms. Split-half reliabilities obtained were .96, .86, and .90 (Spearman-Brown). Sample sizes associated with each reliability coefficient were 30, 258, and 205, respectively.

The ASA is a valid instrument. The validity of the ASA was assessed with the criterion of teacher ratings. Teacher ratings and student responses for the first sample cited had an 88-percent agreement in directionality. While further validity studies are planned, available evidence supports the validity of the instrument.

The ASA is an instrument sensitive to the detection of differential changes in student attitudes. The ASA was used on a pretest-posttest basis with fiscal year 1974 experimental and control students in the RBS career education program. Analyses of variance on pretest scores indicated no differences between groups. Following analyses of covariance on posttest scores with pretest scores, the covariate indicated differential group change in attitude on four of the five scales of the ASA.

COLORED BLOCKS TEST OF BASIC COGNITIVE LEVEL

A language/culture free measure of Piagetian stages of development

This test is a relatively standardized means of assessing Piagetian abilities in children age 5 to adults. The test uses the same simple stimuli throughout to set up a series of problems whose solution requires the use of the logical abilities at each of Piaget's stages of development. The stimuli for all of the questions are wooden blocks of two colors and four shapes. The test is administered to each child on an individual, untimed basis. The instructions are presented both verbally and nonverbally so that they are relatively free of language contamination.

The problems are designed so that there are numerous correct answers. Any child lacking the necessary abilities to perform correctly will feel perfectly satisfied with his or her own lower level answer. The teaching situation serves as the test's basic structure. The tester trains the child in the necessary subskills for each problem and ascertains that the child is attending to the proper aspects of the structure before presenting the problems that will be scored. In this way, the test measures each child's optimal abilities. By determining the most advanced type of problem successfully dealt with by the child, the tester obtains an indication of the logical stage of the child. In addition, a total score can be obtained and used as an indication of the child's ability to adapt cognitively to new situations.

SUBJECT AREA(S)

The subject area is assessing cognitive development in persons aged 5 years and older through adulthood.

INTENDED USERS AND BENEFICIARIES

The test is suitable for use by researchers, curriculum evaluators, teachers, and clinicians. It has been used with samples of Alaskan Eskimos and Creole-English-speaking children in Hawaii as well as more standard U.S. populations and has been found to be of particular use in cross-cultural situations because of its culture-free nature.

GOAL(S) OR PURPOSE(S)

The purpose of this test is to provide a measure of degree of cognitive maturity which is relatively free of contamination due to linguistic abilities or stimulus familiarity of the child.

TIME REQUIREMENTS

The time required to administer this test is approximately 30 minutes for each child.

IMPLEMENTATION PROCEDURES

The test requires only a set of wooden blocks and a set of drawings which is easily constructed from instructions in the manual. The product can be reused indefinitely and is easily portable.

Summary Cost Information

The entire test can be constructed for approximately $20.

Personnel Required for Product Adoption and Implementation

Only one trained tester is required for the complete implementation of this test.

ASSURANCES AND CLAIMS

The test has been designed to be a pleasant, entertaining experience for the child. It elicits no anxiety on the child's part, since its open-ended nature provides no feedback as to performance.

The test's reliance on only colored blocks as materials assures that it in no way encourages sexism, racism, or any other form of social unfairness. It is also relatively free of bias due to linguistic ability or past familiarity with the materials involved.

A COMPUTER PROGRAM FOR ASSESSING "TRUE" STUDENT LEARNING GAINS AND THEIR RELATION TO TEACHER AND STUDENT CHARACTERISTICS

A statistical package computing student gain scores and correlations between these scores and other pupil or teacher data

On many occasions, educational practitioners are interested in measuring the degree to which students increase their knowledge of a particular subject matter or grow in their interpersonal maturity. Educational psychologists have shown that the usual practice of subtracting the score received on a relevant pretest from that recorded on the posttest, following some instructional or intervention program, can lead to fallacious conclusions if the tests are not perfectly reliable. Statistical procedures which provide more accurate estimates of true gains have been proposed recently. A computer program has been written which provides estimates of true gains for individual students or groups of students, computes correlations between the true gain scores and other variables which reflect student or teacher characteristics, and allows for comparisons of the gains made by classes which have received different instructional programs or which differ in some other way.

The program is written in SCOPE FORTRAN IV and can be implemented directly on Control Data Corporation 6000 Series computers. With slight modifications, the program could be adapted for use on IBM or UNIVAC machines. The amount of data (i.e., the number of students, classes, and other variables) which can be processed and analyzed at one time is determined by the size of the computer the user has available. The program requires as input the following: Scores on both a pretest and posttest for each student and an estimate of the reliability of the pretest. Optionally, the user may input information about class membership, instructional program, student characteristics, and teacher characteristics. The user may select from a variety of output options, including estimates of the true pretest, posttest and gain scores (which are corrected for error of measurement), analyses of the effects of class membership and other variables on true gains, and regression equations which can be used in future studies to predict true gains in new samples of students. It is stressed that the program's usefulness is not confined to estimating true gains in academic skills. Any attribute (such as coping skills, interpersonal effectiveness, or attitudes about school) can be processed by this program provided appropriate pretest, posttest, and reliability data are available. The computer program was written to determine the extent to which the interaction of student and teacher characteristics influences true gains. Certain institutions might find it a useful tool for determining which pairings of teachers, students, or classes will maximize expected student gains.

SUBJECT AREA(S)

The subject areas are evaluation and administration. The program can be used for the assessment of true gains in any subject area in which there are pretest and posttest scores available.

INTENDED USERS AND BENEFICIARIES

The technical aspects of the computer program must be handled by a trained computer programer. The proper use of the scores and statistics generated by the program can be made by a person trained in psychological testing. The pupils and teachers who are involved in the testing program will be the primary beneficiaries of the results. The computer program can be used by an institution which offers educational services to students of any grade level, from elementary school through college.

GOAL(S) OR PURPOSE(S)

The purposes of this program are: (1) To calculate true gain scores, (2) to compute correlations between true gain scores and relevant student and teacher variables, and (3) to provide a statistical analysis of the differences in mean true gains shown by various groups of pupils.

PATTERNS OF USE

The computer program can be used by any educational institution which has access to computer facilities and programing specialists. Interpretation of some of the output from the program can be made only by a person trained in educational test theory and statistics.

RD 130 030

TIME REQUIREMENTS

The amount of time required for use of the program can be divided into personnel and computer time. The number of hours of work required of teachers, keypunchers, and programers will vary according to amount of data collected. The number of seconds or minutes of actual computer time required for a given analysis will vary according to factors such as type of computer used, amount of data to be processed, and degree of intercorrelation among the variables.

IMPLEMENTATION PROCEDURES

After a card copy of the program and the program description have been obtained from the developers, the users must examine the FORTRAN source listing to check its compatibility with the available compilers. Once this is done and the users have obtained a successful compilation of the program on their computer, a test data deck supplied by the developers can be submitted and the output obtained checked against that listed in the program description. If the identical results are obtained, the users are ready to analyze any data sets that they may have.

Specialized personnel and equipment are obviously required for the use of this product. Staff skilled in computer programing, statistics, and psychological testing are required. The computer program can be implemented only on a medium- to large-size, high-speed computer.

ASSURANCES AND CLAIMS

The issues of harmlessness and absence of bias do not arise. In fact, if the data put into the program are unbiased, the program output can detect significant differences due to status, ethnicity, class grouping and so on. The developers assure that the program can be transported and implemented on suitable computational equipment.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

INFORMATION CURRENT AS OF APRIL 1975 ■

RD 130 031

PSYCHOSOCIAL MATURITY (PSM) INVENTORY

A self-report inventory measuring the psychological maturity of adolescents, ages 11-18

The *Psychosocial Maturity Inventory* (PSM Inventory) is a self-report inventory that measures the psychosocial maturity of adolescents in the approximate age range of 11-18. The instrument is composed of nine subscales—self-reliance, work orientation, and identity (measures of individual adequacy); communication skills, enlightened trust, and knowledge of major roles (interpersonal adequacy); and social commitment, openness to sociopolitical change, and tolerance of individual and cultural difference (social adequacy).

The PSM inventory is based upon a model of psychosocial maturity that specifies the personal and social qualities and skills that individuals need to perform effectively in society. The model integrates various aspects of development so that these aspects can be assessed as a whole and not on a piecemeal basis.

The PSM inventory can be administered to students by the teacher or other personnel. Completion requires about one class period (50 minutes). The results of the inventory—student scores on psychosocial maturity—are used by the teacher, counselors, and school administrators to determine the needs of the student in developing the personal and social skills and qualities that make up psychosocial maturity. They can then address these needs through classroom instruction, counseling, and schoolwide programs.

The following are sample items from each subscale: A minus sign following an item indicates that the "mature" response lies in the direction of disagreement; a plus sign indicates that the "mature" response lies in the direction of agreement with the item.

1. Self-reliance: You are probably wrong if your friends are against what you decide. (–)
2. Work orientation: Someone often has to tell me what to do. (–)
3. Identity: I believe in working only as hard as I have to. (–)
4. If something more interesting comes along, I will usually stop anything I'm doing. (–)
5. I change the way I feel and act so often that I sometimes wonder who the "real" me is. (–)
6. I have to struggle to keep my behavior what it ought to be. (–)

SUBJECT AREA(S)

Personal and social needs assessment of students as a basis for program development is the subject area.

INTENDED USERS AND BENEFICIARIES

The program is used by teachers, counselors, and school administrators to assess students in grades 5 to 12. Primary beneficiaries are the students whose problems of psychosocial maturity are identified and alleviated.

GOAL(S) OR PURPOSE(S)

The educational community lacks tools for assessing the nonacademic growth of students—their growth as persons and as social beings. This severely limits the schools' ability to exert a systematic positive influence on children's attitudes, values, and personal dispositions. The purpose of the *Psychosocial Maturity Inventory* (PSM) is to provide educators with the assessment instrument that will let them identify specific student needs and develop specific interventions.

PATTERNS OF USE

The assessment value of the inventory is enhanced by its use as a complete unit; however, the subscales can be used individually to assess a specific characteristic or trait.

ASSESSMENT PROVISIONS

The inventory is used to assess student needs and then used again to assess the effects of programs designed to meet the needs. The inventory is given initially; based on the results, the school or teacher implements developmental programs or classwork. The inventory is then readministered to assess any differences in psychosocial maturity produced by the implementation.

TIME REQUIREMENTS

Forty-five to sixty minutes is required for students to take the inventory. Standardized answer sheets are used, and scoring can be quickly accomplished by computer. If used by counselors or teachers with individuals or class-size groups, it can be hand-scored in a reasonable amount of time.

IMPLEMENTATION PROCEDURES

Special services—computer scoring of inventory on large-scale basis—are available.

ASSURANCES AND CLAIMS

Assurances of Harmlessness

There is no evidence to suggest that the product will induce harm (physical, psychological, sociological, or other). In administering the inventory to more than 100,000 students, no student problems developed concerning the inventory questions and answers.

Assurances of Social Fairness

The product does not perpetuate sexism, racism, or other biases such as those related to religion, age, or socioeconomic stereotypes. The inventory does, however, reveal the existence of cultural differences by sex and race—females and whites tend to score higher than males and blacks.

Assurances of Replicability or Transportability

The inventory has been used in a variety of school settings and has been administered by various personnel other than the developers.

Claims of Effectiveness

Using data from a number of administrations of the inventory with many student populations, analyses have shown that the nine subscales of the inventory have adequate internal consistency at grades 5 to 12. The degree of homogeneity within scales makes them appropriate for use in studying (or comparing) groups of individuals, but not for analysis or diagnosis at the level of the single individual. Validity evidence to date is promising, particularly concerning the subscales representing individual and social adequacy.

Claims of Social Fairness

The inventory assesses a concept of psychosocial maturity that includes tolerance of differences in others. High scorers on the inventory have more socially fair attitudes than low scorers. The inventory promotes social fairness by including socially fair attitudes as a facet of maturity. It promotes the "teaching" of socially fair attitudes when it shows school or district areas where student development is needed.

Claims of Careful Product Development

The inventory is based on a concept of psychosocial maturity derived from the scientific disciplines of psychology, sociology, and biology. The model was posted, and scales were developed to measure each aspect of the model. Several studies were conducted of 349 items (form A), resulting in reduction to 108 items (form B). Further analyses produced form C, with 89-93 items, followed by form D, which differs only slightly.

A number of studies were conducted to explore the divergent and concurrent validity of the individual subscales with satisfactory results. Studies of construct validity produced equally satisfactory assurances that the inventory does measure the traits and characteristics identified by the model.

PURDUE SELF CONCEPT SCALE FOR PRIMARY GRADE CHILDREN

A paper-and-pencil instrument for measuring self-esteem as related to physical, social, and academic skills

This product is an instrument suitable for use with young children in grades 1, 2, or 3. It is designed as a paper-and-pencil instrument to be administered to small groups of children (10-12 students). The instrument is intended for group comparisons in research and evaluation studies, and not for individual diagnosis. This self-concept instrument was developed on the grounds that a positive self-concept is essential to effective learning. There was a need for a short, easily administered instrument for use in evaluation studies of educational programs where improvement of self-concept was an expected side effect of the program. The major emphasis of the instrument was development of the child's self-esteem with respect to such content as physical, social, and academic skills and acceptance by peers and family.

The instrument consists of 28 items. Each item consists of two bipolar self-descriptions; the child is asked to respond by indicating position on a five-point scale. Total score consists of the sum of the item scores, where five points are assigned to the most positive self-description.

The manual to accompany the instrument includes the rationale and purpose of the instrument; its construction, administration, and scoring; evidence for validity and reliability (internal consistency reliabilities range from .79 to .92 for various samples of children); and accumulated norm data.

INTENDED USERS AND BENEFICIARIES

The Purdue Self-Concept Scale for Primary Grade Children was designed for use in research and evaluation studies with children in grades 1, 2, and 3.

GOAL(S) OR PURPOSE(S)

The major goal is to provide a measure of the child's self-concept.

PATTERNS OF USE

This product is to be used in research and evaluation studies where improvement in self-concept is an expected outcome or side effect of educational treatment.

TIME REQUIREMENTS

This product requires approximately 30 minutes to administer.

ASSURANCES AND CLAIMS

There is no evidence to suggest that the use of this instrument would induce harmful effects in students. The materials do not appear to display any form of social bias, and ethnic or sexual stereotyping.

PURDUE SOCIAL ATTITUDE SCALES FOR PRIMARY GRADE CHILDREN

A paper-and-pencil instrument for measuring attitudes towards peers, school, home, and community

This is an instrument suitable for use with young children in grades 1, 2, or 3. It is designed as a paper-and-pencil instrument to be administered to small groups of children.

The *Purdue Social Attitude Scales for Primary Grade Children* was developed as a semiprojective device. The projective feature consists of presenting unstructured and incomplete picture stories in three cartoon frames, with the fourth frame containing five stylized faces depicting feeling tones ranging from very positive to very negative. By asking the child to indicate how each story should end, a projection of the student's own thinking, identification with the story character, and investment of self in the situation presented will be determined.

The instrument consists of 40 items. There are 10 picture stories in each of 4 content areas concerned with attitudes toward peers, school, home, and community. The child responds to each item on a five-point scale. Subscores consist of the sum of the 10 item scores in a given area, with 5 points assigned to the most positive attitude, while total score consists of the sums of all 40 items.

The manual to accompany the instrument includes the rationale and purpose of the instrument, its construction, administration and scoring, evidence for validity and reliability (internal consistency reliabilities range from .59 to .71 for the subscores and from .88 to .90 for the total score for various samples of children), and accumulated norm data. The instrument is intended for group comparisons in research and evaluation studies, not for individual diagnosis.

INTENDED USERS AND BENEFICIARIES

The product was designed for use in research and evaluation studies of children in grades 1 through 3.

GOAL(S) OR PURPOSE(S)

The goal of this product is to provide a measure of the child's attitudes toward peers, school, home, and community.

PATTERNS OF USE

This product is to be used in research and evaluation studies where improvement of the child's attitudes is an expected outcome or side effect of educational treatment.

TIME REQUIREMENTS

This product requires approximately 30 minutes to administer.

ASSURANCES AND CLAIMS

There is no evidence to suggest that the use of this product would induce harmful effects in students. The materials do not appear to display any form of social bias, ethnic or sexual stereotyping.

RACIAL ATTITUDES SURVEY INSTRUMENT

An instrument which measures student racial prejudices as a function of inschool interaction

This instrument is intended to measure the racial attitudes of teenage students while controlling the amount and type of interracial contact which the student has experienced. The instrument is intended for use in desegregated schools in which administrators want to learn how students of different races view one another. The instrument can also be used to determine the contexts in which students of different races interact.

The instrument was designed in accordance with the assumption of social contact as a technique to reduce prejudice. Contact theory argues that simply bringing people of different races together may lead to heightened prejudice unless certain conditions for positive interaction are met. Among the most important conditions necessary if interracial contact is to reduce negative stereotypes and prejudices is the need for mutual dependence in the pursuit of common objectives. In schools, mutual dependence often involves activities such as athletics, clubs, and musical groups. By measuring the amount of interracial contact in several activities and correlating contact with racial attitudes, knowledge can be gained about aspects of a school's program which promote racial tolerance.

The survey instrument can be completed by students working at their own speed. The teachers' role is simply that of giving instructions and occasionally defining words. Because of the vocabulary used, the instrument probably cannot be used with students who have not reached the 8th grade. Depending on the reading skills of the students, the survey requires between 25 minutes and 1 hour.

SUBJECT AREA(S)

Evaluation, and administration.

This instrument, since it is not restricted to particular subject areas, can be used by school administrators and teachers in assessing the state of race relations in their school. Survey results may be useful in structuring activities in the school.

INTENDED USERS AND BENEFICIARIES

The survey instrument is designed to be completed by students in grades 8 to 12 in biracial schools. Some students in grade 8, however, have encountered difficulties in completing some portions.

GOAL(S) OR PURPOSE(S)

School authorities will be able to use survey results: (1) To determine the levels of racial hostility in their schools, (2) to identify students evincing high levels of racial hostility, and (3) to encourage students to participate in activities which are associated with racial tolerance in their schools.

PATTERNS OF USE

The survey instrument is used to determine racial attitudes and types of interaction associated with positive attitudes.

ASSESSMENT PROVISIONS

This is not intended as a learning exercise for students. School officials may find bivariate relationships of interest; however, the instrument is designed to be analyzed through factor analystic techniques.

TIME REQUIREMENTS

Depending on their vocabulary and reading levels, students can complete the instrument in 25 minutes to 1 hour.

IMPLEMENTATION PROCEDURES

Nothing special is required.

ASSURANCES AND CLAIMS

No assurances or claims can be made until the surveys which have been conducted are fully analyzed.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Survey instrument	1 per student	To be announced	1 use only

INFORMATION CURRENT AS OF APRIL 1975 ■

RD 130 035

CLASSROOM OBSERVATION SYSTEM

A set of instruments measuring attitudes and interpersonal behavior of teachers and students.

The *Classroom Observation System* is a method trained personnel can use to analyze the functioning of any particular classroom. The analyses derived from this system are most valuable for teacher evaluation and development. Classroom observers will use three components:

1. Classroom observation record—This is an extension of Ryans' scales for describing teacher and student behavior (Ryans, *Characteristics of Teachers*, 1960). Three teacher scales (clarity of speech, cognitive level of lecturing, and of questioning) and four student scales (time on task, cognitive level of presentations, controlled behavior, and happiness) are added. (Interjudge reliability of scales, .70-.97, with median of .88.) A second part of this record is a systematic guide for preparing a verbal description of the content and conduct of the class during the observation period.

2. Student ontask coding system—This records the proportion of time selected students are attending to work. The record is taken at 1-minute intervals for up to 6 pupils; it is taken less frequently if a larger number of pupils is observed. (Interjudge reliability, .85 for two observers.)

3. Student critical incident form—This is a system of categories for describing an important example of an individual student's behavior: Whether alone or interacting; whether the incident illustrates primarily a cognitive, affective, or coping style issue; level of academic effort; cognitive skill level; attitude; autonomy; and peer relations. A detailed verbal description of the incident completes the report.

While each of the components can be used separately, a more complete and useful picture is obtained, with only a moderate increase in the time required, when all three procedures are used together. This describes the teacher's behavior, the behavior of the students as a whole, and the detailed behavior of a sample of students selected either randomly or by a predetermined criterion. The result is a combination of highly reliable, quantitative scores, a detailed description of major events in the classroom, and a detailed record of the idiosyncratic behavior of selected students.

SUBJECT AREA(S)

Evaluation; teacher development.

This system is applicable to all subjects and to all levels from kindergarten to college. The system has been used, to date, in grades 4-7.

INTENDED USERS AND BENEFICIARIES

The *Classroom Evaluation System* can be used in all subject fields, at all levels from kindergarten through college. It is used by trained observers, preferably people with training and experience in teaching. A team of observers can be used or the system can be used directly by curriculum advisers, teacher consultants, or school administrators. The results can be used for individual feedback to teachers for their self-development and for help in diagnosing the special problems of selected students. Qualified consultants should perform such services.

The system could also be used by supervisory personnel as part of a performance review procedure, although the validity and possible side effects of such use would have to be carefully considered, in conjunction with the teachers.

Another application is the use of the system for teacher education at preservice and inservice levels. Individual results can be used for individualized training. Suitably disguised findings can be used as protocol materials in several kinds of training models; e.g., case studies, group discussions.

GOAL(S) OR PURPOSE(S)

The goals of this system are: (1) To identify the working styles, attitudes, learning-relevant personal characteristics, and interpersonal behavior of teachers and students; (2) to determine the distribution of such characteristics in selected groups of teachers and students; (3) to permit rigorous, quantitative tests of propositions about relationships between teaching behavior and student learning and between student behavior and student learning; (4) to provide detailed leads for improving the effectiveness of instruction in particular classrooms; and (5) to identify learning-relevant characteristics of individual students which may suggest ways to improve their learning, affective as well as cognitive, through appropriately individualized instruction.

PATTERNS OF USE

The patterns of use are specified under "Intended Users and Beneficiaries."

ASSESSMENT PROVISIONS

The user's manual for the system describes the procedures for assessing the reliability of observations. It also contains instructions and illustrative examples for assessing the adequacy and usefulness of the student critical incident form and the descriptive report on the teacher's conduct of the class.

TIME REQUIREMENTS

The observation period may be 30-50 minutes, depending on normal class length or user needs. An additional 10 minutes is required, after the observation, to make the ratings. The written description of key events in the class takes 20 minutes, on the average. A critical incident report on an individual student takes 10 minutes to prepare, on the average.

IMPLEMENTATION PROCEDURES

Observers should receive approximately 30 hours of training. About 3 hours is devoted to initial study and discussion of the rating and coding dictionaries. Thereafter, observers work in teams of two or three, observing a class session, completing the records on it, comparing their ratings, discussing discrepancies, and repeating this process until they reach a reliability for pairs of observers of .85. It usually takes 8-10 observations of different classrooms, and subsequent discussions, to achieve this level of reliability. Thereafter, a periodic quality-control check is made on the ratings and the descriptive reports.

Arrangements for the observations, their rationale, and intended use are worked out in advance with the teachers who are to be involved and the appropriate school administrators. Some kind of useful feedback to teachers and administrators should be carried out, maintaining all assurances of confidentiality and other individual safeguards that have been agreed upon in advance.

The system contains a user's manual that describes procedures for obtaining consent for specified uses, training personnel, and testing reliability and validity in new populations; it also has suggested procedures for using the results for several kinds of educational purposes.

ASSURANCES AND CLAIMS

Assurances

The presence of any outside observer causes active concern to most teachers. The notion of being evaluated normally generates great concern. It is, therefore, vitally important that an acceptable rationale and genuine personal safeguards be worked out, in advance, and thoroughly discussed with the teachers. If only the individual teacher is to receive the information from the observations, the threat of external evaluation is relatively minimized; but is is not entirely removed. The observer is, in fact, acting as an evaluator, even if the results go only to the teacher. Consequently, an essential part of the feedback system is the selection and training of observers and feedback consultants who will assure each teacher of considerate, constructive, and tactful treatment.

If observation results are to be used strictly as data for analysis of groups of teachers and students, whether for basic research or to serve practical purposes, complete confidentiality and anonymity can and should be maintained.

If any methods such as these were to be used to evaluate individual teachers for administrative purposes, the entire process of evaluation would require extremely careful, thorough understanding between teachers, administrators, and community representatives. Reliability and validity of evaluation measures are essential ingredients of a sound evaluation process, but they are scarcely sufficient to reassure teachers that the system is a fair one. The interpretation of findings and the uses to which they are put must also be just and must be seen to be just. Unless procedures are installed that guarantee a sound overall evaluation system, to the reasonable satisfaction of everyone concerned, it would be better not to use methods such as this observation system.

Undoubtedly, the best evaluation approach is one which aims at maximizing the effectiveness of each teacher, whether through self-guided development, helpful advanced training, or selective matching with situations and students to make the most of the teacher's particular talents.

Claims

The system has produced ratings with a reliability ranging from .70 to .97 on the various scales, with a median interjudge reliability between trained observers of .88. Previous research has shown significant positive relationships among these scales, student evaluations of teachers, and self-report descriptions by teachers themselves. Current research is relating these several kinds of measures, as well as measures of pupil cognitive gains and affective gains, in a sample of more than 80 teachers and 2,500 students, with results available in November.

This rating system is being continuously assessed by item analysis, factor analysis, validation against independent criteria, and other appropriate tests of its soundness and utility. The "Student On-Task Coding System" has an interjudge reliability of .85. It is included in the validity study just cited.

PEER EVALUATION TO IMPROVE TEACHING

A text and workbook presenting innovative methods for evaluating teacher performance

This is a text and self-instructional workbook based on the observation that school organizations are atypical in the procedures they establish for evaluation of their participants' work. In most organizations, evaluation and lines of authority are either hierarchical (as in business or government organizations) or professional, i.e., evaluation is done by one's colleagues or peers (as in law and medicine). The evaluation of teachers' work shares aspects of both models but fits neither.

The textbook, *Peer Evaluation To Improve Teaching: Research, Process, Applications* (Dornbusch, Deal, Roper), summarizes research on evaluation and authority done by the authors and others in a variety of organizations (from hospitals and university faculties to a football team) and identifies the special problems of evaluating teachers' work. It presents the findings of research on teacher evaluation and identifies the steps in a process of peer, or collegial, evaluation.

In this process, two teachers join together to improve their teaching, using the following sequence: (1) Choosing a fellow teacher as a partner, (2) selecting criteria for effective teaching, (3) self-assessment, (4) pupil feedback, (5) classroom observation by partner, (6) structured conferences between peers, and (7) specific plans for improvement.

The text also presents procedures for adapting the peer evaluation process for use in hierarchical evaluation systems in schools and for use in the preservice training of teachers. Case studies and other data from field tests of the process are included. Also included are relevant forms and other materials from the workbook.

The workbook, *User's Guide to Peer Evaluation To Improve Teaching* (Dornbusch, Deal, Plumley), is a self-contained handbook for applying the process. It sets forth the need for new ways of evaluating teachers and the barriers to effective evaluation, describes the purpose of the peer evaluation program, and explains the seven steps in the process. Detailed instructions for each step, with appropriate forms, are provided. A summary section points the way to further improvements in the peer, or collegial, process.

SUBJECT AREA(S)

The subject areas are evaluation, preservice, and inservice teacher training.

INTENDED USERS AND BENEFICIARIES

The range of potential users includes more than 2 million active teachers as well as future teachers to be trained. The text can be used in professional education courses in student teaching, educational administration, social foundations of education, and curriculum and methods; it will also be of interest to school administrators in some 21,000 school districts. The workbook is expected to be used by preservice teacher trainees in the courses described above (particularly student teaching) and by practicing teachers in school systems.

GOAL(S) OR PURPOSE(S)

The teacher completing the workbook will have: (1) A better understanding of the tasks and goals of teaching, (2) an improved procedure for continued feedback, self-improvement, and professional growth, and (3) an insight into ways teachers can work together for purposes beyond evaluation of teaching. The school administrator using the text or coordinating use of the workbook will have acquired a new technique for evaluation of the teacher's work and a method for fostering teacher professional growth. The teacher trainer will have become aware of a new tool for improving the professional competence of students.

PATTERNS OF USE

The text may be used in the preservice college courses listed under "Intended Users and Beneficiaries" and may be read by administrators in the schools. The workbook can be used in college courses, in formal inservice training programs in schools, or at the initiative of teachers or administrators. Impetus for such use may come from teacher organizations.

ASSESSMENT PROVISIONS

Since the process is directly concerned with the evaluation of teachers' work, it contains its own built-in procedures for assessment. The structured conferences between teaching peers and the development of specific plans for improvement (the sixth and seventh steps cited above) provide concrete guidelines for changing the teacher's behavior in directions previously identified and accepted.

TIME REQUIREMENTS

The program set forth in the workbook can be completed in 8 to 10 hours. Time spent reading or discussing the text will vary with the emphasis given to it.

IMPLEMENTATION PROCEDURES

The workbook is self-contained and does not require use of the text, although the text provides additional insights. Full use of the process requires provision for observation in a teaching situation and for structured conferences between teachers. If the peer evaluation process is established as part of the school's formal evaluation procedures, organizational arrangements will need to be developed at the school and probably the district levels.

ASSURANCES AND CLAIMS

Assurances

The workbook portions of the process have been field tested with teacher trainees (interns) in the Stanford Secondary Teacher Education Program and with practicing teachers in the Pleasanton-Amador, Calif., school district. An abbreviated version of the process has been implemented in workshops held by SCRDT professional staff members for groups of California administrators and teachers. Feedback from these situations has indicated that the materials are transportable and replicable. No evidence of negative effects or social bias in the materials has emerged from the field tests or the workshops.

Claims

The field tests and workshops have produced positive reactions from their participants. Feedback from both sources is being incorporated into the final revision. Evidence of the potential appeal of the peer evaluation process is provided by the fact that the California Teachers Association distributed announcements of the March-April 1975 workshops to its members in the six-county San Francisco Bay area.

THE TEACHER CONCERNS CHECKLIST (TCCL)

A Likert Scale instrument which measures teacher motivations

The Teacher Concerns Checklist (TCCL) is an easily administered, quickly scored instrument which taps the major areas of concern of teachers. The checklist was originally developed for use in teacher training programs, but has since been used in several studies on inservice teachers.

Frances Fuller originally suggested that, in order to harness motivation for learning in teacher education programs, notice should be taken of the expressed needs and concerns of teachers. She also theorized that the prospective teacher goes through a developmental sequence of concerns during the teacher education program. Specifically, three types of concerns were identified: Concerns about self, concerns about task, and concerns about impact. It was hypothesized that concerns about self and concerns about task are less mature than concerns about pupil needs and that the latter gradually replace the former as the teacher progresses through teacher training.

The instrument itself consists of 56 Likert-scaled items, each of which describes a teaching concern. The instructions read: "When you think about your teaching, what are you concerned about?" This is followed by the leading statement, "I am concerned about" followed by the 56 items. For each item, five response alternatives are provided for the teacher to indicate the degree of concern over that item: (1) Not concerned, (2) a little concerned, (3) moderately concerned, (4) very concerned, and (5) totally preoccupied. Teachers relate to the format and content of the checklist which takes them only about 10 minutes to complete.

SUBJECT AREAS(S)

The subject areas are teacher education, needs assessment, program development, personalized feedback, individual counseling, and evaluation.

INTENDED USERS AND BENEFICIARIES

Although designed primarily for use by teacher educators and teacher trainee counselors, the checklist has been used by researchers interested in teacher effectiveness.

GOAL(S) OR PURPOSE(S)

The goals of this product are: (1) To assess the needs of preservice teachers, (2) to evaluate the affective dimension of teacher training programs, and (3) to assess individual teacher's areas of immediate concern as an aid in counseling and feedback sessions.

PATTERNS OF USE

The checklist can be used repeatedly to assess the development of concerns as teacher trainees progress through a program, or one time only as an indicator of concerns at a crucial point (such as immediately before the first exposure to classroom instruction).

ASSESSMENT PROVISIONS

The checklist is an assessment device which can easily be incorporated into a wide variety of inservice and preservice programs. Use of the information provided by the checklist can be adapted to a wide variety of situations ranging from formal evaluation of a teacher education program to individual counseling in an inservice teacher workshop.

TIME REQUIREMENTS

The checklist requires about 10 minutes to complete. Scoring can be accomplished either by hand or with the aid of a computer. Hand scoring requires about 5 minutes per checklist. Interpretation of the scores has not been fully automated; making clinical judgments of the meaning of the scores is perhaps the most time-consuming aspect of the use of the instrument.

IMPLEMENTATION PROCEDURES

Access to keypunch facilities and a computer terminal can be very helpful if a large number of checklists need to be scored. A computer program for scoring the checklist and printing out limited diagnostic information will be available in the near future. Interested users may wish to adapt this program to their local computer, or make arrangements with the third author to mail in checklists for processing.

ASSURANCES AND CLAIMS

Assurances

The checklist has been in use for several years. More than 2,000 preservice and inservice teachers completed the instrument or an earlier version during its development. The authors have every reason to believe that item content is relevant to teachers and representative of the concerns they have. A number of independent studies are currently underway which incorporate the checklist as an index of development during teacher training. Thus, it is apparent that researchers not connected with the instrument's development have seen the usefulness of the measure.

Claims

The checklist has been shown to be highly reliable in a 2-week test-retest situation. Each subscale has a high internal reliability and the total score is a stable index of overall level of concern.

The authors have some reservations about the external validity of the measure. No other reliable measure of the phenomena under consideration exists, so external validity is impossible to firmly establish. The authors are currently collecting data which may reflect on the validity of the measure, but results of this investigation will not be available before spring 1976.

TEACHER ASSESSMENT SYSTEM

An assessment system using self-report instruments to give personalized feedback to each teacher

This four-instrument system obtains self-report data from teachers on salient features in their life histories, perceptions of themselves as individuals, perceptions of the problems, pleasures, and effects of teaching, and preferred ways of coping with school issues. The Biographical Form, Adjective Self-Description, and Directed Imagination have been developed, field tested, revised, and validated in a continuing series of applications since 1962. Views of Teaching, a measure of teacher coping style and teaching-relevant attitudes, was used first in 1969 in a revised form; it is undergoing field testing which will be completed in 1975.

While each of the instruments can be used separately, research has found that they measure different, relatively nonoverlapping characteristics which, together, provide a multidimensional profile that has proved significantly related to independent measures of teaching behavior and pupil learning.

SUBJECT AREA(S)

Subject areas are evaluation, teacher training, administration, and counseling.

INTENDED USERS AND BENEFICIARIES

The system can be used: (1) By counselors to give personalized feedback to a teacher, to aid in self-development; (2) as a guide to teacher educators in preservice and inservice training, to facilitate individualized instruction; and (3) as an aid to school administrators in working out teacher-class pairings that are likely to increase student learning and teacher satisfaction.

GOAL(S) OR PURPOSE(S)

The purpose of this product is to aid in teacher self-development and to aid school administrators in working out teacher-class pairings that are likely to increase student learning and teacher satisfaction.

TIME REQUIREMENTS

The maximum completion time for each part is: Biographical Form, 25 minutes; Adjective Self-Description, 10 minutes; Directed Imagination, 20 minutes; and Views of Teaching, 30 minutes.

IMPLEMENTATION PROCEDURES

All instruments can be completed at times and places chosen by the individual teacher; no supervision is required. Scoring of the instruments can be done by testing assistants or similar members of a school personnel staff with moderate professional training. A scoring manual for each instrument forms part of the system.

ASSURANCES AND CLAIMS

Assurances

Both the protection of the personal rights of teachers and the validity of their responses to the instruments depend on careful safeguards in the scoring, interpretation, and accessibility of individual results. In principle, teachers who are asked to respond to the instruments should be told exactly who will have access to the results at any time and what measures will be taken to insure that there can be no unauthorized access to the data by anyone other than those identified to the teachers in advance. Detailed instructions for safeguarding confidentiality are contained in the user's manual for the systems.

Three of the instruments have been used as part of a personalized feedback system with several thousand preservice student teachers in many parts of the United States since 1962. In this application, a faculty level counselor interpreted the test results to the teachers. In most situations, selected findings were also communicated to other members of a faculty team, to assist them in tailoring the individual student's training. In numerous evaluation studies, the teachers' reactions have been predominately favorable; the relatively few individual objections have almost never included assertions of personal harm or unfairness.

When used in research to relate teacher characteristics to other measures of teaching behavior (such as the center's classroom observation rating system) or to measures of student gains in cognitive and affective respects (see the center's pupil assessment system), complete individual confidentiality has been assured.

No risk of harm or unfairness has arisen in this application. The system will be fully replicable and transportable by November 1975.

Claims

In two studies with different samples of inservice teachers, scores from the assessment system have correlated between .50 and .90 with highly reliable (.90) observation-based ratings of classroom teaching behavior. In another study, the assessment scores correlated significantly with pupil gain scores and with student evaluation of teaching scores. In a large-scale current study involving 84 teachers and 2,600 children, the assessment scores are being correlated with classroom observation scores, with pupil ratings, and with pupil gains on 6 aspects of cognitive and affective learning, emotional adjustment, and coping skills. The results will be available by November 1975. The instruments in the system have been repeatedly tested, revised, and retested over a period ranging from 1962 to 1975.

TEACHER AFFECTIVE SENSITIVITY SCALE (TASS)

A validated simulation device measuring a teacher's ability to identify verbal and nonverbal emotions expressed by a student

The *Teacher Affective Sensitivity Scale* (TASS) is a validated simulation device that measures a teacher's ability to identify verbal and nonverbal emotions expressed by a student (teacher affective sensitivity). The instrument consists of video taped excerpts of teacher-learner interactions in classroom settings. Subjects responding to the instrument are asked to identify (via multiple-choice responses) the emotions felt by the student during each video tape episode.

Sample Lesson

(Addressed to Respondents)

You will be viewing scenes of classroom sessions. Your task is to identify the feelings that particular students were experiencing when the video taped episodes were filmed.

The multiple choice items listed below consist of three responses. Each video taped scene that you will be viewing has two corresponding multiple choice items. The first item per scene focuses on the student's feelings about self or the subject. The second item focuses on the student's feeling about the teacher and/or the other students in the classroom.

After you view each scene, read the two multiple-choice items and ask yourself the following question. If the student were to view this same scene and were able to be completely open and honest (i.e., could identify personal feelings), which of these responses would be used to describe those feelings?

After you have selected the response that you believe most accurately describes what the student was feeling, indicate your choice on the answer sheet.

Sample Item

1. At the end of this scene, the feelings I have about myself and/or the subject matter are:
   a. I don't know what to say. I wish I could get away from here.
   b. Great! Now I've got him/her. He/she is going to do what I want.
   c. I don't like myself very well. I never seem to do the right thing.
2. The feelings I am experiencing concerning the teacher and/or the student with whom I have been interacting are:
   a. The teacher is disappointed in me, but I guess he/she wants to help.
   b. I don't think you're interested in me.
   c. You're always too busy to talk.

SUBJECT AREA(S)

The subject area is preservice and inservice teacher training.

INTENDED USERS AND BENEFICIARIES

The intended users are teacher educators, preservice and inservice teachers, and counselors.

GOAL(S) OR PURPOSE(S)

The teacher taking the TASS will be able to identify verbal and nonverbal emotions expressed by students (as depicted on the video tape) and to select the answer from each multiple-choice item that most accurately describes the affective state of the pupil viewed on the screen.

PATTERNS OF USE

For ease of use, the film episodes depicted on the TASS, along with the accompanying multiple-choice items, should be viewed sequentially.

Numerous training techniques aimed at developing interpersonal skills have been implemented for teacher preparation and inservice programs during the past few years (Carkhuff, 1969, 1971; Berenson, 1971; Blakeman and Emener, 1971; Gazda, 1971). To analyze whether these techniques are able to meet their specified program objectives (e.g., to help teachers to be more understanding and sensitive to feelings of others), a measurement device is needed. The *Teacher Affective Measurement Scale* can provide data useful for this type of program evaluation.

As the teaching market has progressively tightened on a national basis, preservice institutions have given increased consideration to the establishment of student selection, as well as program implementation criteria. If one of these criteria focuses on teacher sensitivity and concern for other human beings, or some other related objective, the scale could be utilized to assess this dimension. This application of TASS may produce some much-needed information for training institutions.

The *Teacher Affective Measurement Scale* could be used as a training device. If awareness is one of the prerequisites of behavior change, then it is conceivable that a teacher's understanding of his/her current level of affective sensitivity may serve as a catalyst for the improvement of this psychological dimension. Utilization of TASS for training purposes will require further development and evaluation to appraise the resulting outcomes.

ASSESSMENT PROVISIONS

A scoring key accompanies TASS.

TIME REQUIREMENTS

Approximately 45 minutes of respondent viewing/answering time is required.

ASSURANCES AND CLAIMS

The following selection and editing criteria were utilized to formulate TASS. Thus, it reflects these specifications.

Previously recorded media (films and video tapes) depicting classroom interactions were viewed and analyzed by the recorder to obtain 50 examples of various learner affective expressions. All of these recordings had been purchased by the Audio-Visual Center at Washington State University. The following criteria were employed to guide the selection of the needed excerpts.

1. The video tape excerpts are representative of a diverse array of human emotions.
2. For each basic emotion, a series of excerpts is included which represents increasing levels of the emotion.
3. A variety of student grade levels ranging from K to 12 are depicted on the video tape.
4. Both male and female students are represented on the video tape excerpts.
5. Students from different racial and ethnic backgrounds are depicted on the video tape.

Once video tape selections were made, an additional set of standards (editing criteria) was used to evaluate the media episodes. Each excerpt was analyzed by the investigator and a media specialist to insure that it met the following editing specifications:

1. The sound quality of each episode is such that the recorded learner-teacher interactions are clearly audible to subjects viewing the video tape.
2. The sound track of each episode is synchronized with the physical picture on the video tape.
3. The physical image (picture) portion of each episode is clearly visible to subjects viewing the video tape.
4. The timing and duration of each episode insures that essential aspects of the learner's behavior are included on the video tape.
5. The video tape is free of splicing defects.

Evidence is presented in this study that teacher affective sensitivity is an important factor influencing the learning that transpires in the classroom and a measurable psychological construct. At no point, however, is affective sensitivity described as the sole constituent of teaching effectiveness. Such a statement would be unrealistic and irresponsible. The investigator concludes that many aspects are available for further study and need to be explored. It is assumed that this research will provide impetus for the continued theoretical and methodological investigation of teacher affective sensitivity and the vast number of additional variables associated with the teaching-learning exchange.

ISSUES AND PROCEDURES IN THE DEVELOPMENT OF CRITERION-REFERENCED TESTS: ERIC/TM REPORT 26

A paper providing a nontechnical discussion of issues and procedures in the development and use of criterion-referenced tests

This product discusses the basic steps and procedures in the Development of Criterion-Referenced Tests (CRT's), as well as the issues and problems associated with these activities. In the first section of the paper, the discussions focus upon the purpose and defining characteristics of CRT's, item construction and selection, improving item quality, content validity, item and test bias, test scores, packaging, and other considerations. In the second section, the results of a survey conducted to assess current efforts in criterion-referenced testing are summarized. Five defining characteristics—program focus, instructional dependence, objective and item generation, test models and packaging, and test scores—are provided for representative criterion-referenced testing programs. From this analysis, 10 questions that the CRT developer must answer in order to clarify the nature and purpose of a CRT are provided.

SUBJECT AREA(S)

Subject areas include evaluation, development, and use of criterion-referenced tests.

INTENDED USERS AND BENEFICIARIES

Teachers, educators, school administrators, program evaluators, curriculum specialists, and graduate students are intended users of this report. Primary beneficiaries are curriculum specialists, program evaluators, and other educators considering the use of criterion-referenced tests.

GOAL(S) OR PURPOSE(S)

To provide a nontechnical discussion of the salient issues and essential procedures in the development and–use of criterion-referenced tests.

ASSURANCES AND CLAIMS

The initial manuscript for this paper was submitted to a number of experts in measurement and criterion-referenced testing. The authors incorporated these comments and suggestions into a second draft which was reviewed in a similar manner.

Since its publication in 1973, permission to reprint was requested by an editor of a book of readings in educational and psychological measurement. The paper was also included as an article in the 1974-75 *Education Yearbook* published by Macmillan. The paper has been used as a text and required reading in a number of graduate courses in educational measurement and continuing education courses for program evaluators, test developers, and school administrators.

OPENING INSTITUTIONAL LEDGER BOOKS—A CHALLENGE TO EDUCATIONAL LEADERSHIP: ERIC/TM REPORT 28

Methods of reporting test results to audiences lacking sophistication in measurement

Explaining test results to groups of teachers, school board members, parents, and the communications media can be a very difficult and forbidding experience. This product outlines procedures for developing a public understanding of why tests are administered in the schools, the kinds of tests that are used, and the interpretation of different kinds of scores and statistics. Suggestions are made for increasing the effectiveness of presentation of test results through preplanning and discussing test data in terms of topics which are meaningful to the audience (such as the identification of pupil needs, the relationship between test results and instructional programs, and problems which the school and the community must address). Sample tables and charts are presented to serve as models for ways of presenting statistical data in an easily comprehensible, graphic format.

SUBJECT AREA(S)

Subject areas include evaluation, communication, and dissemination of test results.

INTENDED USERS AND BENEFICIARIES

The intended users are educators, school board members, researchers, and instructors of courses in educational measurement, and their students. Primary beneficiaries are individuals who need assistance in reporting test results to an audience that lacks sophistication in measurement.

GOAL(S) OR PURPOSE(S)

To provide guidelines for effectively communicating the results of a testing program to parents, school board members, the media, and community groups.

ASSURANCES AND CLAIMS

The initial manuscript for this paper was submitted to a number of measurement experts for review. The author incorporated these comments and suggestions into a second draft which was reviewed in a similar manner.

PROCEDURES AND ISSUES IN THE MEASUREMENT OF ATTITUDES: ERIC/TM REPORT 30

A guide to the design, construction, scoring, and interpretation of original scales to measure attitudes

Procedures and Issues in the Measurement of Attitudes is a 13-page guide to the design, construction, administration, scoring, and interpretation of original scales to measure attitudes. This overview is designed primarily for novice researchers, graduate students, and program evaluators who lack expertise in psychometrics and who may not have a clear conception of the nature of an attitude. To remedy this deficiency, there is a basic discussion of: (1) The nature of attitudes; (2) the relationship between attitudes and similar constructs such as beliefs, opinions, and personality traits; (3) the relationship of attitudes to behavior; (4) the measurable characteristics of attitudes; (5) basic criteria for the adequacy of attitudinal measures; and (6) a comparison of the semantic differential, Thurstone, Likert, and Guttman approaches to attitude measurement. The construction of attitude scales is discussed in terms of the development and construction of items, initial data collection, reliability, and validity. Guidelines are presented for administering, scoring, interpreting the results, and reporting the data.

SUBJECT AREA(S)

Testing is the subject area of this guide.

The construction, administration, scoring, and use of original questionnaires are presented.

INTENDED USERS AND BENEFICIARIES

The intended users of this guide are educators, program and project directors, graduate students, and instructors of courses in tests and measurements. Primary beneficiaries are individuals who lack a strong background in psychometrics but are faced with the task of constructing a questionnaire.

GOAL(S) OR PURPOSE(S)

The goals of this guide are: (1) To discuss issues relevant to the nature of attitudes, (2) to refer the reader to works indexing a variety of existent attitude scales; and (3) to discuss comprehensively, but nontechnically, the way in which attitude scales are constructed, administered, scored, interpreted, and reported.

ASSURANCES AND CLAIMS

The initial manuscript was submitted to a number of measurement experts for review. The author incorporated their comments and suggestions into a second draft which was reviewed in a similar manner.

A COLLECTION OF CRITERION-REFERENCED TESTS: ERIC/TM REPORT 31

An annotated bibliography of 21 criterion-referenced tests

This product is an annotated bibliography describing 21 criterion-referenced tests in terms of the trait, ability, or skill being evaluated; format for administration; response mode; scoring procedures; and technical and supportive data. All criterion-referenced tests are not cited. The tests cited are characteristic of the variety of tests that have been labeled "criterion-referenced." In addition to the test descriptions, the author presents a brief discussion of the advantages, limitations, and uses of such tests.

SUBJECT AREA(S)

The subject areas are evaluation and criterion-referenced tests.

INTENDED USERS AND BENEFICIARIES

The intended users are program evaluators, curriculum specialists, measurement and evaluation specialists, and others investigating the possibility of using criterion-referenced tests. Primary beneficiaries are those involved in program and curriculum evaluation.

GOAL(S) OR PURPOSE(S)

The major goal is to provide a descriptive overview of the variety of tests which are labeled "criterion referenced."

ASSURANCES AND CLAIMS

The initial manuscript for this paper was submitted to a number of measurement experts for review. The author incorporated their comments and suggestions into a second draft which was reviewed in a similar manner.

EVALUATION DESIGNS FOR PRACTITIONERS: ERIC/TM REPORT 35

Four evaluation designs used in school inservice settings

Whether a project concerns the program of an entire school system or the day-to-day practice of a teacher in a single classroom, planning and implementing any facet of the educational program calls for decisionmaking. The interactive nature of the educational process produces a dynamic environment; hence, decisions made at one point in time require reassessment at the next point in time before another round of decisions can begin. Evaluation provides a framework for building a systematic data base to aid in making decisions in school and classroom practice. With an appropriate data base, problems can be reformulated; both potential and actual consequences can be analyzed; and, as a result, the processes can be redirected.

Practitioners are not afforded the luxury of ideal laboratory conditions. The natural settings of the classroom, school, or school system place constraints upon the type of data which can be obtained; educators must work with less than an ideal experimental design.

This product describes four evaluation designs used in their natural settings. Each involves an evaluation study that takes into account a variety of constraints, but nevertheless provides a basis for subsequent program and/or organizational decisions. The four evaluation designs are: (1) A true experimental design that necessitates the random assignment of students to experimental and control groups, (2) a nonequivalent control-group design, (3) a time-series design, and (4) a noncomparative group design.

SUBJECT AREA(S)

Evaluation and the design of research and evaluation programs for use in natural settings of the classroom, the school, or the school system.

INTENDED USERS AND BENEFICARIES

The intended users are program evaluators, educators, educational researchers, program monitors, and graduate students. Primary beneficiaries are educators who are not well versed in research design, but who wish to design effective evaluation studies.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To outline four evaluation designs which can be used effectively in natural school settings and (2) to emphasize the application of good evaluation data to informed decisionmaking.

ASSURANCES AND CLAIMS

The initial manuscript for this paper was submitted to a number of evaluation experts for review. The authors incorporated their comments and suggestions into a second draft which was reviewed in a similar manner.

FINANCE, PRODUCTIVITY, AND MANAGEMENT

1044

OVERVIEW

ELISSA FELDMAN
Research Specialist
School Finance and Organization Division
Finance and Productivity Group
National Institute of Education
Washington, D.C.

The problem

American educators and education policymakers face a host of pressures that are often contradictory, but reflect the changes in our society that are affecting all of our public institutions. Popular demands for more effective education are now accompanied by public disagreement over the proper goals of education and the most appropriate way to measure outcomes. State and Federal judicial actions have given rise to a nationwide movement for taxpayer equity and equality of educational opportunity, while recent research casts doubt on the assumed relationships between school resources and student achievement. Declining enrollment and rampant inflation place new demands on the creativity of our educational institutions, while with each passing year the confidence of American citizenry in their public institutions diminishes, with an attendant loss of commitment to finance these services.

These conditions argue for conducting research for education decisionmakers which will deal with financing education—both the generation and allocation of funds; with management—organizing human and financial resources to most effectively deliver education; and productivity—maximizing the benefits of each dollar spent for education.

Overview of the field

Although State and local policymakers have long been concerned with reforming school-financing arrangements, the past 5 years have evidenced a marked awareness of existing disparities in raising and spending funds. Beginning with the California Supreme Court *Serrano v. Priest* decision in 1971, which held that fiscal disparities among local districts based on wealth violated State constitutional requirements, a series of Federal and State court decisions questioning the validity of existing financing arrangements have ensued. State legislatures now find themselves struggling to reform their existing tax and education finance laws to provide greater student and taxpayer equity. These debates have raised a series of difficult questions: Do existing tax structures provide an appropriate base for fiscal equality? Is equity synonymous with equal dollar expenditures for all children despite differences in costs, needs, and district size? Is it possible to distribute existing revenues more equally or will additional revenues be required?

The impact of the State-based finance reform movement is growing: to date more than 14 States have enacted major revisions in their school-finance laws; research on a host of finance issues has been initiated by the Federal Government, State legislatures involved in the reform process, university research institutions, and organizations representing State policymaking and educational interests. Despite increasing interest in the field, a variety of issues requires further investigation, including (1) questions of education cost differentials, encompassing urban and rural differences, teacher-salary disparities, varied costs of individualized services, and traditional expenditure disparities between primary and secondary students; (2) the potential benefits of greater State assumption of school support and the impact of such proposals on local community control; (3) expenditure disparities within districts as opposed to those which exist between districts; and (4) the effects of changing tax structures to rely more on personal and corporate income than on property wealth.

At roughly the same time that the courts and legislatures have begun to focus on basic issues of school finance equalization, the social and economic context in which policy is being made has begun to change shape. Education research and evaluation in the past few years have poked large holes in widely held assumptions that increased resources lead to increased outcomes, i.e., that schools with more money will produce students with higher test scores. In the face of *Serrano* and successive cases which assume that equalizing resources will equalize outcomes, policymakers are increasingly looking at the organization and management of the schools for factors which influence student performance.

The complex nature of the issues currently facing American public education is further compounded by a steady downward trend in school enrollments, an accompanying oversupply of teachers, a high rate of inflation, and a growing unwillingness of taxpayers to pass school-bond issues. Consequently, questions of improved school efficiency and productivity are foremost in the minds of educators and education policymakers. Expenditures on education have increased more than tenfold in the past two decades (from $9 billion to $96 billion), and since 1950 the fraction of the gross national product devoted to education has risen from 3.4 to about 7 percent. While higher enrollments and retention rates have

Ms. Elissa Feldman has been associated with federally sponsored education voucher projects at the Office of Economic Opportunity and the National Institute of Education. Her current responsibilities include monitoring of service-oriented projects in the areas of State and local school finance and management.

FINANCE, PRODUCTIVITY, AND MANAGEMENT

been a major source of increased expenditures, much of the increase derives from increased unit costs of education, largely caused by rising teacher salaries and fringe benefits and decreasing pupil-teacher ratios. There is little evidence, however, that these increased expenditures have improved the effectiveness of education. Some of the low productivity in the educational sector may be attributable to the use of inefficient processes for which equally effective less expensive processes could be substituted.

A systematic approach to raising educational productivity requires agreement on the desired outputs of education, adequate methodology to measure and compare them, and a better understanding of the way in which student outcomes and inputs interact.

NIE products and the field

The Finance and Productivity Division inaugurated research in these areas in fiscal year 1976. NIE products listed in this publication are primarily oriented toward management techniques and practical organization questions. Future publications will catalogue new products in the broader area of finance and productivity as the results of more recent research become available.

Current work in this area can be characterized as follows:

- Developmental service-oriented school-finance research products to inform education policymaking at both the State and local level;
- Policy studies of the alternative ways States have responded to finance issues arising from recent court decisions;
- Analyses of the impact of shifting enrollments—both declining and increasing—on school districts' abilities to manage resources and organize the delivery of educational services in the face of fluctuating demands;
- Studies of issues faced by States and LEA's as they consider competency-based education, where the conferring of education credentials is based on skills or knowledge individuals have demonstrated;
- Exploration of assessment techniques designed to enhance the usefulness of evaluation research findings to practitioners and educational decisionmakers;
- Models of school-district organization which increase productivity by improving the efficiency of the delivery of educational services.

COST-EFFECTIVENESS GUIDE FOR ADMINISTRATORS

A handbook for a cost/benefit analysis of an alternative curriculum

Cost-Effectiveness Guide for Administrators is a handbook designed to help school personnel make curriculum program-selection decisions based on a consideration of cost and effectiveness. This assistance is given by providing a process for gathering information regarding the relative cost and effectiveness of alternative programs and then making comparisons among them. Any school personnel involved in curriculum program selection would find the handbook useful.

The topics covered in the handbook include: specifying the curriculum change desired, specifying general program selection criteria, identifying curriculum programs that meet general selection criteria, identifying specific selection criteria with the option of assigning relative weights to the criteria, gathering detailed cost and effectiveness information on feasible program alternatives, comparing alternative programs, and selecting a curriculum program for adoption or adaptation.

The product consists of two looseleaf notebooks: One for the project manager or leader of the curriculum selection effort in a school district and one for all members of the curriculum selection committee. The notebooks are divided into appropriate task units for ease of use. Each unit contains use management instructions, text, examples, exercises where needed, and worksheets and/or information sheets for application of the procedures taught to the district's own curriculum-selection effort. The product is designed for group use, but it can be easily adapted to individual use.

SUBJECT AREA

Evaluation, administrative planning, and curriculum selection.

The product emphasizes group involvement in the systematic collection and analysis of information on alternative curriculum programs. The procedures allow school district personnel: (1) To carefully specify the criteria by which they will select a "best" program for them, (2) to gather detailed cost and effectiveness information on alternative programs, (3) to compare and select a program, and (4) to document the selection process and final program choice.

INTENDED USERS

The product is intended for use by any school personnel involved in the selection of a curriculum program. This includes central office administrators, building level administrators, and teachers.

GOAL(S) OR PURPOSE(S)

The goal of the product is to help school districts make curriculum selection decisions on the basis of realistic cost and effectiveness information. This is accomplished by providing users with a systematic method for gathering information, comparing programs, and making a final program selection.

PATTERNS OF USE

The material is self-contained requiring no specially trained individual for use. The material is organized according to the major tasks of a curriculum selection effort and should be used sequentially with each of those tasks. In this manner, the product facilitates the group performance of the several tasks.

Although the product is self-contained, users may choose to obtain outside consultation or help in their curriculum selection effort from the developers. In addition, the basic process employed in the materials can be adapted to other decision situations in a school district.

ASSESSMENT PROVISIONS

A series of checklists is included in the product so that the project manager can monitor each task in the curriculum selection effort.

TIME REQUIREMENTS

The material takes approximately 8 hours to complete. The total time required for selecting a curriculum program will vary greatly depending upon the time it takes a district to gather the cost and effectiveness information desired on each curriculum program under final consideration.

IMPLEMENTATION PROCEDURES

No specially trained individuals are required for a district to use the product. It is recommended, however, that one person direct the use of the materials in curriculum selection in a district. The product is best used by a small group rather than an individual or large staff.

Personnel Required for Product Adoption and Implementation

The product can be used by a single individual or a committee of three to seven district staff without any previous training in curriculum program selection. Districts can choose to obtain consultation and other services from the developer. Cost for different services can be obtained from the developer.

ASSURANCES AND CLAIMS

The subject of the product is rational decisionmaking procedures for use in selecting curriculum programs. This emphasis minimizes the chance of harm resulting from use. The developer has not received any reports of harm associated with the use of the product.

Steps are being taken to ensure that the product excludes social bias. During the pilot testing of the prototype version, several RBS staff not involved directly in the development of the product reviewed it for social bias using an NIE rating scale. A few incidences of bias were identified and are being corrected.

The pilot test of the prototype involved school personnel of varied training and experience. Later formative evaluation will involve different school districts and varied personnel to help verify that the product can be generalized and transported.

COST EFFECTIVENESS TECHNIQUE

RD 140 002

A cost-effectiveness model for assessment of a basic elementary school skills curriculum

The purpose of this study was to demonstrate the feasibility of a cost-effectiveness analysis approach. Eight instructional alternatives within three primary reading programs were studied in the Louisville, Kentucky, Public Schools. Data collected covered program description and implementation, student characteristics, effectiveness measures, and costs. Program implementation data were used to adjust effectiveness measures. Students were grouped using characteristic data. By dividing the mean adjusted effectiveness measures by the per-pupil program costs, a set of cost-effectiveness ratios was calculated which could be used to compare programs.

The study generated information which indicates the possible feasibility of the approach. The utilization of three of the four data types suggested in determining the cost effectiveness of instructional programs was successfully implemented. The utilization of a fourth type, implementation data, was not adequately accomplished. Therefore, the feasibility of the approach was not completely demonstrated. However, the study does suggest a high likelihood of feasibility and has pinpointed areas of implementation difficulties. It is hoped that the results of this effort, both negative and positive, will assist in the development of a cost-effective methodology which can be utilized by the education practitioner.

The final report presented the cost-effectiveness model in a manner which would permit direct implementation if the implementer has established or can establish a data base which collects and maintains data on program design, program effectiveness, and program costs.

SUBJECT AREA(S)

The subject areas of the *Cost-Effectiveness Technique* are cost effectiveness, curriculum evaluation, early childhood, educational accountability, feasibility studies, and reading development.

INTENDED USERS AND BENEFICIARIES

Although tested in the basic skills areas at the elementary level, this technique can be utilized by educational administrators in many curricular and grade levels, including higher education.

GOAL(S) OR PURPOSE(S)

The purpose of this technique is to provide administrators with data on programmatic operations in a format which assures that both effectiveness and cost are considered in programmatic decisionmaking.

PATTERNS OF USE

This technique does not specify a particular pattern of use. It can be used for routine assessment or for indepth analysis of problem situations according to site needs.

ASSESSMENT PROVISIONS

This technique does not introduce values into data analysis. However, the user may select a wide range of subsidiary techniques for program documentation which may or may not bias results. The utilization of this model requires administrative understanding of the assumptions behind subject programs and the biases in documentation (e.g., biases in instruments such as standardized tests) in order to interpret results adequately.

TIME REQUIREMENTS

Great variation in time requirements for the application of this technique will result from variables such as scope of desired cost-effectiveness analysis and the locally available research and evaluation resources. Potential cost savings through the use of this technique well exceed the actual cost of execution.

IMPLEMENTATION PROCEDURES

Where an experienced research/evaluation staff resource exists, implementation of this model should be relatively simple.

MATERIALS AND EQUIPMENT

Where subsidiary evaluation data exist, this model can be applied at minimal expense. Local conditions will determine final costs.

ASSURANCES AND CLAIMS

The results of the NIE study suggest that considerable value exists in this model. As in any research/evaluation model, the final quality or benefit of the model depends upon the quality of data inputs and the appropriateness of the interpretation of the data outputs, factors which cannot be controlled by this model.

HANDBOOK OF ORGANIZATION DEVELOPMENT IN SCHOOLS

Methods to plan and implement change in a school organization

This 436-page handbook is a guide for school consultants, administrators, team leaders, supervisors, counselors, and psychologists who plan and implement organizational change in their schools. It presents organization development strategies, designs, and techniques indepth, and specifies their practical application. It is a reference tool and a guide to consultative action. The organization development strategy takes intact systems (the organization as a whole) or subsystems (intact work groups) as targets for change, rather than taking the individual as target. The strategy brings each member of the system actively into the assessment, diagnosis, and transformation of the organization.

The core chapters treat critical features of organizational life: Communication processes, goal setting, working with organizational conflict, effective meetings, solving problems, and making decisions. Each of these chapters sets forth theory, skills needed, exercises to develop these skills, and procedures to facilitate that aspect of organizational life. Each chapter presents at least one sample microdesign for organizational training and excerpts from selected readings. The handbook also contains sections on the design of training interventions and both the formative and summative evaluations of organization development interventions.

SUBJECT AREA(S)

The *Handbook of Organization Development in Schools* discusses organizational theory, organization development technology, training program design and evaluation, data gathering, and problem solving.

INTENDED USERS AND BENEFICIARIES

This handbook is primarily designed for use by organizational consultants and specialists (both internal and external to the educational organization), administrators, team leaders, supervisors, counselors, psychologists, and groups of teachers who are involved in planned change in school organization or who want to improve their organization's effectiveness. Secondarily, it can also be useful to professors and students in education, educational administration, and educational psychology, research and development centers in education, and regional laboratories.

The primary beneficiaries are school boards, school district administrators, building administrative staffs, educational planning teams and committees, educational (teaching) teams, the entire staffs of schools, and groups of parents and students that are organized for involvement in their school.

GOAL(S) OR PURPOSE(S)

The goals are to provide both a theory and a methodology for change agents and others who want to improve their organizational effectiveness. Specific goals are (1) To acquaint the readers with important concepts and dimensions of organizational functioning, (2) to teach skills and procedures that will enable school personnel to increase the effectiveness of groups and organizations by improving their functioning on these dimensions, and (3) to provide the school personnel with the tools for evaluating what they are doing.

PATTERNS OF USE

The handbook provides the raw materials from which specific interventions may be designed and implemented in a variety of settings. For maximum effectiveness, the group or organization desiring to receive the benefits of organizational development should be prepared to commit a considerable amount of time to the process. Major structural change within an organization takes at least 1 academic year of organizational development consultation. During this period, the staff should be ready to set aside blocks of time, ranging from a minimum of 2 or 3 days to a maximum of 2 weeks (usually during the summer). They should be prepared to set aside 2- or 3-day periods two or four times during the year. They should expect to supplement this with periodic meetings with consultants during their regular meeting times, evening hours, or during planning periods throughout the year.

In terms of hours, it takes approximately 160 hours of staff time, 40-80 before school opens, and 80 spread over the school year. Smaller time commitments are necessary in situations in which the primary target is less than major structural change in the organization. The described techniques can be used for a group's self-renewal or planning sessions or to deal with specific issues or areas of conflict that are affecting the group at a specific time. For these types of interventions, 1 to 3 days and a followup meeting of 1 or 2 hours may be sufficient.

The subject areas are set forth in a recommended sequence for overall training. However, this is to be regarded as flexible and subject to redesign in response to the needs of each situation.

ASSESSMENT PROVISIONS

There has been no systematic assessment of presumed effects of the handbook itself. Instead, it provides users with numerous "instruments" by which they can assess the efficacy of their own work. If organizational specialists find their work effective when using the handbook and the assessment methods it suggests, this is evidence that it is effective. Unfortunately, there is no systematic list of users who have assessed their work and found it effective. The sales records are evidence enough—the sales have gone up in every 6-month period since publication in 1972.

Effectiveness of the training can be assessed by the participants in the training and by the outcome of their actions. Questionnaires can be administered in a pretest and posttest fashion which assess the group's or organization's norms for communication, influence, collaboration, quality of meetings, satisfaction with job, and other variables. In addition, the effectiveness can be evaluated in terms of the actions carried out by members of the group such as solutions to problems, decisions that are implemented, or structural changes within the organization.

TIME REQUIREMENTS

To facilitate major structural change in the organization, 1 year of OD consultation is essential. A recent analysis of data from one of the projects indicated that 2 years may be essential for school-wide structural changes. During the training period, two to four time periods ranging from 2 or 3 days to 2 weeks are required. In addition, these are supplemented with periodic meetings with the consultant. For other purposes such as a team's self-renewal, planning session, or training in specific skills, a time commitment of 2 or 3 days is advisable.

IMPLEMENTATION PROCEDURES

Effective organizational development has certain prerequisites. First, a competent OD specialist who is sensitive to individual, group, and organizational dynamics is needed. This person may be from inside or outside of the organization. Second, the organization must be flexible enough to temporarily rearrange scheduling and staffing to meet the needs of training and increased planning. There are several other criteria that seem to indicate a "readiness" in an organization for OD training. These criteria are: (1) A degree of openness already existing in the organization, (2) a degree of collaboration already existing in the organization, and (3) a degree of commitment to the goals of the project. To assess these criteria, the implementation process calls for an organizational diagnosis, usually through interviews or questionnaires, prior to the training.

ASSURANCES AND CLAIMS

When adequate consideration has been given to the school's readiness, diagnosis, and preparation, the technology presented in the handbook will not affect users negatively nor perpetuate social biases. In fact, this type of organizational development usually reduces the effects of social prejudice, because it teaches people how to make use of personal resources, make decisions and to take action wherever needed in the organization, instead of relying solely on traditional means which often support social distance and prejudice. Research indicates that the technology is replicable and transportable within the populations studied.

HOW TO INVENTORY ORGANIZATIONAL NEEDS

*A discussion of implementation of school improvement
through setting goals, selecting curriculum, and
implementing and evaluating programs*

How To Inventory Organizational Needs guides school superintendents and other top-level administrators in systematically examining their procedures for bringing about school improvements. School improvement is a complicated process that demands careful examination and planning. The product helps administrators develop not only a common understanding about the position of the school system on school improvement and the specific directions the school system can take to bring it about, but also a basis for determining the resources necessary.

The product focuses on the four school improvement activities of setting goals, selecting curriculum programs, implementing programs, and evaluating programs. An inventory booklet, consisting of a questionnaire, a description of the school improvement process, and an interpretation of the questionnaire, guides users in examining their capability in each area. The product contains worksheets and directions for use.

The inventory can be used in either an individual or group setting, although the latter is preferred. Each member of the planning group individually completes the inventory. Next, a clerk analyzes and summarizes group responses and gives the summaries to the members of the group. Users then come together in a meeting to discuss their answers and the implications of the results for increasing the school's capability for improvement.

SUBJECT AREA(S)

This inventory focuses on planning and administration.

This product emphasizes the self-examination of a school district's capability or procedures for bringing about improvements in curriculum and instruction. Major topics covered are: (1) Setting goals, (2) selecting curriculum programs, (3) implementing programs, and (4) evaluating programs.

INTENDED USERS AND BENEFICIARIES

The product has been designed for use by school superintendents and other district or central office administrators.

GOAL(S) OR PURPOSE(S)

The goal of this product is to help school district superintendents and other top-level administrators examine their decisionmaking processes related to curricular change and improvement. Upon completion of the product, school administrators will have: (1) A realistic assessment of the capabilities of their school district to initiate change, (2) a listing of priorities for improving their capabilities, and (3) an understanding of the resources needed to implement a school improvement program.

PATTERNS OF USE

The product is self-contained and requires no specially trained individual for its use. It can be used by an individual working alone or by a planning group. In a group setting, a committee of no more than seven members is recommended. A group leader, the superintendent, or someone designated by the superintendent organizes and conducts the meeting. Participants prepare for the meeting individually, going through the materials at their own pace. They complete the questionnaire, interpret it, and examine its results. Then, as a group they discuss results, conclusions, implications, and possible courses of action. A clerk may be used to tally and summarize the results and distribute them to participants before the meeting.

ASSESSMENT PROVISIONS

The product contains detailed instructions for use by the district.

TIME REQUIREMENTS

The materials can be completed in approximately 2 hours. The group discussion session may take 3 or 4 hours.

IMPLEMENTATION PROCEDURES

No specially trained individual is required to use the product. The formation of the planning committee and the appointment of a group leader are recommended.

Summary Cost Information

Since the product is still under development, no price has been fixed. Current usage is restricted to field-test sites.

Personnel Required for Product Adoption and Implementation

The product can be used by a single administrator or small administrative team. Consultation and other services are available from the developer at various costs.

ASSURANCES AND CLAIMS

The subject of the product is administration self-assessment of a district's capability/procedures to being about change. This emphasis minimizes the chance of harm resulting from use. The developer has not received any reports of harm associated with the use of the product.

The nature of a content of the product tends to minimize the chance of social bias. Although early product formative evaluation activities have not addressed this issue, later product evaluation will.

The pilot test of the prototype involved school personnel of varied training and experience. Later formative evaluation will involve different school districts and varied personnel to help verify the generalization of results and transportability.

PLANNING PROGRAM IMPLEMENTATION: A PROCESS GUIDE

*A handbook outlining major tasks to be considered
when developing program implementation plans*

The *Planning Program Implementation* unit is a 114-page handbook that outlines the major tasks to be considered when developing program implementation plans. Particular attention is given to the details which need attention after a specific program has been chosen. The text emphasizes that the planning process proposed is only one of a variety of ways that the task might be approached. The unit should be used as a guide to thoughtful planning and not as a book of rules. The unit assumes that (a) planning to implement a program is a group process that should involve those who will have responsibility for actual implementation in making the decisions about the programs, (b) these staff members already have the capability for performance of the necessary planning tasks with only the direction provided by general guidelines, and (c) the specific program to be implemented has already been chosen to meet a pressing problem faced by a school.

The unit consists of the following major parts: Section I, an introduction describing the use of the unit, the approach taken, the assumptions upon which the unit is based, and the goals of the unit; section II, the major tasks of planning; section III, suggested procedures for school planners using the unit; and section IV, a more detailed description of each major task outlined in section II.

An appendix sets forth the crucial features of the design of an instructional program in experience-based career education which can be used as a basis for program implementation (if users of the unit have not chosen a particular program to meet an identified need). Two other short appendixes describe the use of task worksheets and provide a glossary of terms used in the unit. Additionally, there is a comprehensive bibliography that includes references to publications and other kinds of training materials that might be useful in staff training.

SUBJECT AREA(S)

Instructional planning and management involves the establishment of instructional program purposes, the design and implementation of programs, and the evaluation of instructional programs. This unit is directed to the second of these three areas. It emphasizes familiarity with and use of particular kinds of processes in a systematic way.

INTENDED USERS AND BENEFICIARIES

The unit is designed for school personnel; i.e., building principals, department heads, district curriculum specialists, and classroom teachers directly concerned with planning for the introduction of a chosen or developed instructional program in classrooms. The unit will prove most useful to staff members drawn from a single school, or group of schools, who are faced with a common instructional problem. It may also be useful to groups composed of staff from different schools or districts, as in university graduate courses or interdistrict workshops, although this is likely to result in a somewhat artificial use of the material.

GOAL(S) OR PURPOSE(S)

The unit is designed to assist users to become more effective planners and managers of their own programs. The unit helps the staff: (1) To prepare implementation plans for previously designed or selected programs in an existing school system, (2) to improve existing implementation plans and practices through group participation and contingency planning, (3) to reduce the failure rate of new programs and lessen the need for expensive, long-term pilot projects, and (4) to prepare plans that contain sufficient information for budgeting.

PATTERNS OF USE

The developers recommend that the unit be used in a self-conducted, group, inservice training program. A group leader is selected from the members to serve as a guide and assistant. Participants are divided into groups of five to eight persons who work through the unit in six sessions of about 3 hours each. There will be considerable variation in the time requirements from one situation to another, depending on the characteristics of the group and the amount of effort that has been devoted to the prior steps of program planning. Individuals who want to train themselves can simply read the material or work through a program with two or three other people, although the group setting is strongly recommended. However the unit is used, the sequence of chapters must be followed.

ASSESSMENT PROVISIONS

Evaluation of each other's individual performances is done by team members. At the end of each session there is a brief discussion evaluating the session in which the individual is urged to participate to the fullest extent.

TIME REQUIREMENTS

An actual implementation plan could be developed using the unit in six sessions of about 3 hours each. There will be considerable variation in the time requirements from one situation to another, depending on the characteristics of the group and the amount of effort that has been devoted to the prior steps of program planning.

IMPLEMENTATION PROCEDURES

The unit does not require any special materials or equipment for its use. Scheduling requirements will be contingent on the needs of the particular group working with the unit. There is no separate set of materials intended for the coordinator or leader.

MATERIALS AND EQUIPMENT

The coordinator and each member of the group should have a copy of the guide. Its price is $5.

ASSURANCES AND CLAIMS

A careful reading of the guide does not reveal any social, ethnic, or sexual stereotyping. The extensive review, prototype testing, and revision processes of the guide indicate that it is easily replicable and transportable.

DEVELOPER/AUTHOR:

Far West Laboratory for Educational Research and Development
1855 Folsom St.
San Francisco, Calif. 94103

AVAILABILITY

A limited number of copies of the guide is available from the developer/author. Further dissemination of the guide is contingent on more field testing.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 140 006

ATTENDANCE MONITORING SYSTEM (AMS)

A documented computer system to prepare daily and cumulative attendance reports

Attendance Monitoring System (AMS) is a complete computer system with documentation and program listings designed for an IBM 1130 Computing System. When the AMS is implemented in a school it provides daily attendance and late lists that give cumulative days absent and late, monthly and other summary data by homeroom, and an updated attendance data file.

AMS is comprised of a series of interrelated programs which access a common data file. Brief descriptions of the programs are given in the "Patterns of Use" section.

SUBJECT AREA(S)

Student attendance at the school and classroom level is the subject area of this project.

INTENDED USERS AND BENEFICIARIES

School administrators are the users of *Attendance Monitoring System* (AMS). Its use allows them to identify absence problems and to monitor changes that may occur due to corrective efforts. In the development of AMS, the school's students benefited by being heavily involved in the day-to-day operation of the system. The students participated as part of their training in computer usage.

GOAL(S) OR PURPOSE(S)

The goal is to provide schools with a method to measure their attendance problems and monitor progress toward improvement.

PATTERNS OF USE

AMS must be implemented as a complete unit as spelled out by the user's handbook. Briefly, the programs are as follows:

ATINL—initializes all data files and assigns each student a unique identification number based on grade and homeroom to be used in all subsequent computer programs and builds a calendar file. ABPST—reads student cards for each person absent, posts the students absent for that day, and increments the particular month and year-to-date absent totals by one. ATRUN—reads student cards for each person late, posts the students late for that day, and increments the particular month and year-to-date late totals by one; prints a daily attendance report listing all absent and tardy students for the day along with their year-to-date totals for absence and tardiness; and prints percentages of students absent and tardy. MAINT—disk maintenance program which deletes and/or changes any existing student record; also adds new students to the proper file. LSTFL—lists any specified number of records in any specified file (all existing permanent files can be listed). KDPRT—prints or punches attendance data for any month in the school year; also prints or punches students absent or late more than X percent of time. RETR—subroutine which finds the value of an attendance day for a particular student; the routine does not change any value in the attendance record and is used in ABPST and ATRUN. PACK—subroutine which stores appropriate attendance data in the attendance vector and also increments the accumulator values by one; used in ABPST, ATRUN, and MAINT. UNDO—subroutine which resets the value of the attendance vector to zero for the day specified by IDAY and subtracts one from the year-to-date totals. FLICK—subroutine which tests for entering of legitimate file number; used in all the attendance programs.

ASSESSMENT PROVISIONS

AMS has no formal provisions; schools would assess on the basis of their informational needs.

TIME REQUIREMENTS

AMS would require a full year's use to identify long-term absenteeism problems, patterns, and changes.

IMPLEMENTATION PROCEDURES

Special equipment and facilities—IBM 1130 Computing System, either access to or on premises.

Special services—computer programs specialist.

Special user considerations—users would need to be highly motivated to take the time and trouble to implement AMS. Schools with major attendance problems should be so motivated; others would not.

Personnel Required

Computer specialist—may be teacher involved in programing or a computer instructor.

ASSURANCES AND CLAIMS

Assurance of Harmlessness

There is no evidence to suggest that the product would induce physical, psychological, sociological, or other harm.

Assurance of Social Fairness

The product in no way discriminates in sexual or social dimensions.

Assurances of Replicability or Transportability

This cannot be assured. The product does work without direct control of the developer, but the only installation has been in a school where the developer has control. It is felt that a school with computer acess could replicate the AMS by following the user's manual, but information on replications is lacking.

Claims

The AMS is being effectively used in one urban high school to monitor student attendance. It provides a more accurate monitoring than the previous paper system used by the school. No other claim can be made until replication is conducted.

SYSTEM APPROACH FOR EDUCATION (SAFE)

A competency-based instructional system which provides materials for 36 hours of workshops in simulated problem solving through system analysis and synthesis

System Approach for Education (SAFE) is a competency-based instructional system which provides all materials and procedures for conducting 36 hours of training. Organized into 20 instructional sequences or units, it is conducted as an inservice workshop or preservice course. Continuous active participation is demanded by using simulation situations in which the trainee helps a fictitious teacher solve a problem using the system approach. It applies the system technology planning techniques used widely in industry and the military to the areas of curriculum and instruction.

SUBJECT AREA(S)

The subject area is system technology planning.

INTENDED USERS AND BENEFICIARIES

The intended users are educational administrators and classroom teachers.

GOAL(S) OR PURPOSE(S)

This instructional system is designed to provide teachers with the knowledge, skills, and techniques for analyzing, planning, designing, implementing, and evaluating learner experiences by applying the tools of system analysis and system synthesis. The skills include: Assessing needs, defining goals, stating mission objective, specifying performance requirements, specifying mission constraints, deriving a mission profile, performing function analysis, performing task analysis, performing methods/means analysis, identifying solution alternatives, selecting feasible solution strategy, implementing a solution strategy, evaluating the solution strategy implementation, and utilizing continuous revision to accomplish mission objective.

PATTERNS OF USE

These materials are sequentially organized toward the cumulative attainment of the stated objectives. The training design includes a great deal of participant interaction for feedback, simulation trials, and interdependent action. For this reason, all participants are required to commit themselves to full attendance at all workshop sessions.

TIME REQUIREMENTS

The 20 instructional units of this system are organized into a 36-hour workshop.

IMPLEMENTATION PROCEDURES

The activities require a qualified instructor identified by R. E. Corrigan Associates who can conduct the program for approximately 15 participants. Released time may be necessary for school personnel to participate in training sessions.

ASSURANCES AND CLAIMS

During a series of trial workshops, participants were repeatedly asked for feedback concerning this system. In addition to open-ended questionnaires, the "mission" analyses created by participants during training were occasionally collected and reviewed. Occasional individuals stated that the system's content or form was not relevant for them. There were no reports from participants, trainers, or implementors that participants had experienced physical, psychological, or sociological harm. Other reactions were used to revise the system.

Social fairness issues have been considered in creating and revising these materials. While the generic "he" is sometimes used when referring to persons of either sex, the system is generally fair and has been accepted as such by participants.

This system was developed primarily by R. E. Corrigan Associates as a resource for trainers with some expertise in its content and form. While nondevelopers have conducted successful workshops, the developers feel that workshop leaders, wishing to use this system, should be approved by them.

A field test was conducted using two alternate versions of the system with a population of 108 people at 5 workshops. Results of one version were somewhat more positive than the other. Results for the more positive version which is now commercially available are as follows:

1. Eighty-eight percent of the participants found their workshop experience worthwhile and 83 percent would recommend it to a friend.

2. At least 68 percent of the participants responded positively to items about the relevance of the system. Thirty percent reported that, before they could use the process at their worksite, changes would have to be made over which they had no control.

3. Significant cognitive gains were achieved. Mean pretest scores were 5.87 and mean posttest scores were 18.46. It should be noted that a high score of 38 is possible. The developers propose use of the system's materials in an "open book" manner following this training.

4. An expert rated products that were created in the workshops. The mean rating score was 62.86 on a possible

score of 74. Of 14 products rated (products are created by teams of 3 in the workshop), 10 were judged as good, 4 as fair, and none as poor.

5. On a followup questionnaire, 80 percent of the participants reported they had made at least some progress in following through with projects initiated in the workshops.

6. On a preattitudinal and postattitudinal measure, participants moved toward more positive responses on 11 dimensions and more negative on 4. On "anticipating using SAFE in my classroom," there was particular positive movement.

R. E. Corrigan Associates applied the system technology process in developing the system. The process emphasizes a very thorough analytical approach—working toward operationally defined subjectives within stated requirements and constraints. Testing, revision, reanalysis, and replanning were carried out according to this process. The NWREL collaborated in some aspects of this process, making some design recommendations, creating a simulation for use in the training, and conducting a field test of two final versions of the system. Results of the NWREL test are indicated here. Results of other testing may be requested from R. E. Corrigan Associates.

MATERIALS AND EQUIPMENT

INDIVIDUALLY GUIDED EDUCATION (IGE)

An alternative form of public schooling which focuses on student development through individualized curriculum and instruction

Individually Guided Education (IGE) is an alternative form of public schooling developed by the Wisconsin Research and Development Center for Cognitive Learning. It is a total system which draws together various educational practices and concerns and focuses upon individual student learning. Every element and phase in the development, refinement, and implementation of the system is designed to create the conditions for effective educational planning, teaching, and learning.

In IGE, the broad range of phenomena ordinarily associated with education has been organized into seven components:

1. Multiunit School (MUS)—The multiunit school is the organizational structure designed to enable educational decisionmaking, open communication, and accountability to occur at appropriate levels of the school system.
2. Instructional Programing Model (IPM)—The IPM provides a framework for teaching children according to their own rates and styles of learning, levels of motivation, and other characteristics, while taking into account the general educational objectives of the school.
3. Curriculum Materials and Instructional Procedures—The Wisconsin Research and Development Center has developed individualized curriculum materials and instructional procedures which are compatible with the IPM.
4. Model for Measurement and Evaluation—The model includes assessment of each child's readiness, progress, and final achievement by the use of criterion-referenced tests and other assessment procedures.
5. Program of Home-School-Community Relations—The students, staff, parents, and citizens who make up the IGE school community must mutually understand each other's resources and expectations in order to create and maintain an optimum learning situation.
6. Facilitative Environments—Relationships established to maintain and strengthen IGE are developed among local, intermediate, and State education agencies and teacher education institutions within each State.
7. Research and Development—If IGE is to remain viable, it must be capable of incorporating change. Continued research and development generate knowledge and programs related to curriculum, instruction, and administration which can be infused into the IGE system.

SUBJECT AREA(S)

As a total system of individualized education, *Individually Guided Education* (IGE) encompasses all subject areas of the curriculum. The Instructional Programing Model (IPM) may be applied to any subject.

INTENDED USERS AND BENEFICIARIES

IGE has been designed for use in elementary schools throughout the Nation; IGE for the secondary level is currently under development. Due to the program's comprehensiveness, the entire staff of a school is involved in implementing IGE. In order to facilitate the implementation of IGE, personnel from teacher education institutions, State education agencies, intermediate education agencies, and local education agencies are trained in IGE concepts and practices and become IGE implementers.

The ultimate beneficiaries are the students who will benefit from teachers' increased abilities to individualize instruction. Students of varying backgrounds, abilities, and characteristics—including special learning handicaps—all benefit from IGE.

GOAL(S) OR PURPOSE(S)

IGE is a comprehensive system of education designed to produce higher education achievements through providing for differences among students—in rate of learning, learning style, and other characteristics.

PATTERNS OF USE

The IGE system has been operationalized in schools in many ways. Performance objectives for schools to follow in implementing the IGE and minimal criteria for being considered an IGE school have been identified. The minimal criteria are: The entire school is organized in the multiunit school organization pattern and the school applies the Instructional Programing Model (IPM) to at least one curricular area. Variations on the school organization and the instructional program are still possible within the broad parameters of the minimal criteria.

A major strength of IGE is its flexibility. There are as many patterns of IGE as there are IGE schools. As long as the basic tenets of individualization contained in IGE are accepted and the minimal criteria are fulfilled, a school is free to adapt the system to meet local needs. Another strength of IGE is that changes are made incrementally, as the school is ready to accept new practices.

ASSESSMENT PROVISIONS

Within IPM, assessment plays a significant role. The level of achievement, learning style, and motivation level of each student is assessed prior to instruction through the use of criterion-referenced tests, observation schedules, and work samples with appropriate-sized groups. Following instruction, students are assessed for attainment of initial objectives. Assessment data are used for program evaluation.

TIME REQUIREMENTS

The time involved in the implementation of IGE varies among schools. Schools are encouraged to implement the multiunit school organization throughout the entire school and to apply the IPM to at least one curricular area by the end of the first year of implementation. As an IGE staff becomes more experienced, it will expand the IPM and related assessment and evaluation procedures to additional curriculum areas, participate in the relationships established within the facilitative environments, and develop a program of home-school-community relations. The total implementation of IGE in a school will probably require from 5 to 7 years.

IMPLEMENTATION PROCEDURES

Basic to the entire implementation of IGE are staff development activities designed to help individuals develop the concepts and skills needed at each phase of implementing IGE. Two major groups need to develop these concepts and skills: People directly involved in implementing IGE in a school, typically local education agency personnel; and people "implementers," people who facilitate or support that implementation, typically personnel from State or intermediate education agencies and/or from teacher education institutions.

Since 1971, when the national implementation of IGE was initiated, the Wisconsin Research and Development Center's activities have been guided by a model which defined efforts, ranging from dissemination of information to the establishment of IGE as an alternative form of schooling. The model was conceptualized in five phases—awareness, commitment, changeover, refinement, and renewal. For each implementation phase, there are staff development activities in which the staff of a prospective IGE school should participate.

Statewide IGE networks have been established to assure a continuing, cooperative relationship between IGE users and sources of assistance. The prototypical State IGE network is comprised of the State education agency, intermediate education agencies (where appropriate), teacher education institutions, and local school districts organized at three levels—local, regional, and statewide. At each level, there is a formal organizational arrangement established whereby IGE personnel can deal with solving problems.

In 1969-70, only 50 elementary schools, all in Wisconsin, were implementing IGE. By 1974-75, approximately 2,500 schools in 38 States had made the complex change to this new educational system.

The rate of IGE implementation over the past 7 years has been enhanced by funds from the U.S. Office of Education (USOE) and the National Institute of Education (NIE), and the commitment to IGE by thousands of local education agencies, State education agencies, and teacher education personnel in 35 States. In addition, two recent events have significantly influenced the diffusion of IGE. One was the funding of the University of Wisconsin/Sears, Roebuck Foundation IGE teacher education project by the Sears, Roebuck Foundation. Funding was for preparing materials which can be used in undergraduate and graduate teacher and administrator education programs. The second major event was the establishment of a national professional association for persons involved in IGE, the Association for Individually Guided Education.

ASSURANCES AND CLAIMS

Assurances

The transportability and feasibility of the IGE system as an alternative form of schooling is indicated by its adoption record. The years 1966 through 1970 saw a gradual increase in the number of schools implementing IGE. Beginning with only 13 units in 1966 in 3 Wisconsin school systems, the total number increased to 50 schools in 1969 following an official endorsement of IGE by the State superintendent of public instruction. By 1971, there were 164 schools in 7 States implementing IGE. In summer 1973, the National Institute of Education approved implementation funds to continue the center's efforts. By the summer of 1974, an additional 100 schools began implementation, bringing the total to over 2,000 schools in 37 States. An independent evaluation of the Wisconsin Research and Development Center's nationwide implementation effort has indicated success in initiating and maintaining the implementation momentum.

All IGE staff development materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. If there is any question on such matters, review of the materials by qualified persons will take place and the materials will be revised to eliminate such shortcomings.

No such complaints regarding bias or harmfulness have been received by the center.

Claims

Since 1967, the Wisconsin Research and Development Center has worked cooperatively with personnel from educational agencies in developing the IGE system. The development of IGE has come about through an iterative process of conducting research to discover more about how children learn; developing improved instructional strategies, processes, and materials for school administrators, teachers, and children; and offering assistance to educators and citizens which will help transfer the outcomes of research and development into practice. After a developmental need for IGE was recognized, the following process was applied to the development of each aspect of the product: Plan, develop, conduct expert review, tryout, revise, and publish. At all stages of development, the substance and form of the product have been evaluated.

The major claims to be made about IGE are in two areas: The careful development of the product and the effectiveness of the multiunit school organization, the instructional program, the school climate, and the implementation process. These claims are supported by research conducted in IGE schools.

The multiunit school organizational pattern provides a stimulating facilitative environment for the individualization of instruction. Staff members participate in small-group shared decisionmaking, sharing their professional expertise in planning, instruction, and evaluation. Leadership from teachers, unit leaders, and principals emerges in this organizational pattern.

The multiunit school organization has been found to be more dynamic than the conventional organization of the elementary school; it is less centralized, less stratified, and more adaptive.

The IPM of IGE describes a systematic approach to individualization. Even though this model is more difficult to implement than the multiunit school organization, indications of its effectiveness have been identified. In the IGE instructional program, there is an increase in the number of opportunities for students to be involved in determining their own goals; a reduction in lockstep grouping of students; and flexibility in the use of independent, small-group, and large-group student grouping patterns. Some IGE schools have found significant student achievement gains. These results have been found in various community types and locations.

The school's organizational and instructional climate is influenced by IGE. Organizational climate in multiunit schools is significantly different than that in non-multiunit schools. Multiunit schools are more change and achievement oriented; their staffs are instructionally satisfied, are more motivated, and perceive greater levels of productivity; and they employ more educationally progressive practices. Students in IGE schools have a more favorable learning climate than students in traditionally organized schools.

ARIOLE PLANNING KIT

A self-instructional educational planning kit for practicing educators and students of education

The *Ariole Planning Kit* was created in response to administrators and teachers who asked for help in the planning process. The kit was designed, not as a tool for high-salaried planning specialists or consultants, but as a guide to suit the needs of educators at all levels of involvement. The design is flexible enough to be used in any number of situations (e.g., ranging from a classroom in which students are applying techniques of planning and problem solving to a State department in which innovative systems are being evaluated), but structured enough to be of use to pragmatic educators. To accommodate the range of users and situations, the kit is self-instructional, tuned to the skills of practicing educators and students of education.

It is from the emphasis on looking at both the past and the present in attempting to plan for the future that Ariole takes its name from the word "ariolist"—one who predicts the future by using the phenomena in the environment.

Ariole's orientation is teleological; decisions in the planning process must be made in light of desired outcomes.

SUBJECT AREA(S)

Ariole is a self-contained, self-instructional kit incorporating concepts from the fields of planning, problem solving, small-group behavior, data analysis and survey, military history, and philosophy. It also taps successful elements of existing planning methods and attempts to overcome some of their weaknesses.

INTENDED USERS AND BENEFICIARIES

The *Ariole Planning Kit* was created in response to administrators and teachers who asked for help in the planning process. The kit was designed to suit the needs of educators at all levels of involvement. The design is flexible enough to be used in any number of situations, ranging from a classroom in which students are applying techniques of planning and problem solving to a State department in which innovative systems are being evaluated, but are structured enough to be of use to pragmatic educators. To accommodate the range of users and situations, the kit is self-instructional, tuned to the skills of practicing educators and students of education.

GOAL(S) OR PURPOSE(S)

The purpose of this kit is to provide a flexible, self-instructional program tuned to the skills of practicing educators and students of education who desire to embark on a planning activity.

PATTERNS OF USE

To use the kit, the planner begins with the guide, which offers specific planning guidelines for and keys to introduce the user to the other three parts of the kit. Each of the guide's 18 sequential decision points generally share the same format: A description, discussions, and a list of alternatives and considerations. Each decision point generally takes a maximum of 1 hour to complete. The kit is constructed so that some decision points may be skipped if a previous decision makes them irrelevant. Decision point 10, "Categorizing Responses," exemplifies the format.

ASSESSMENT PROVISIONS

There are no prior assessment provisions. Evaluation of the kit is based on the final plan developed by the user and whether it is accomplished.

TIME REQUIREMENTS

There are no set time requirements; users work at their own pace.

IMPLEMENTATION PROCEDURES

There are no special equipment requirements beyond the basic *Ariole Planning Kit*.

MATERIALS AND EQUIPMENT

DATA MANAGEMENT AND DECISION-MAKING

Instructional materials designed to acquaint educational administrators with the applications of operations research to educational administration

Data Management and Decisionmaking (DM/DM) is a set of instructional materials designed to teach practicing and potential educational administrators about the uses of operations research in educational administration. It consists of five units: (1) "Operations Research in Education," (2) "PERT/CPM: A Planning and Analysis Tool," (3) "Linear Programing," (4) "Queueing Theory," and (5) "Computer Simulation."

The first of these units is designed as an introduction to the other four and is intended to be an "organizer" for the other units. Each of the units introduces a specific operations research technique and provides instruction on the basic terminology and skills involved in the technique. Each unit gives the user practice in the procedures of the technique and in using the computerized versions of the technique. In each case, instruction is provided in using the computer terminal, inputting the data, and interpreting the output of the computer program. Throughout each unit, examples from the field of education are used to illustrate points and procedures and the final portion of each unit discusses how the technique can be used in solving educational administration problems. The units are constructed so that the user is made aware of the unit instructional objectives before starting work on the unit, and exercises are interspersed throughout the tests to give the user practice in using the covered concepts.

As the titles of the above-listed units indicate, the materials are concerned with four specific operations research techniques beginning with PERT, which is a technique for planning the allocation of resources in large projects. The second is linear programing, which is a mathematical technique for optimizing such quantities as cost under conditions of constraints. Queueing theory, the third technique, is a mathematical method for analyzing situations in which a queue or line of customers must wait for some service. The final technique, computer simulation, is a much more general problem-solving method. It is the process of using the computer to investigate situations in which it is too dangerous, expensive, or would take too long to experiment with the actual situations. The two examples that are used as illustrations in the text are bus routing and enrollment prediction.

SUBJECT AREA(S)

The subject area is educational administration management.

INTENDED USERS AND BENEFICIARIES

The intended users of the program are educational administration students and practicing educational administrators.

GOAL(S) OR PURPOSE(S)

The overall goals of the *Data Management and Decisionmaking* materials are to instill an awareness of and some familiarity with specific operations-research techniques in educational administrators and to create a positive attitude toward using operations research in educational administration.

PATTERNS OF USE

Data Management and Decisionmaking can be used in college level courses in educational administration, inservice or special training workshops, and independent study in operations research. Each of these three uses of the DM/DM materials requires different conditions.

When the DM/DM materials are used in a college course in educational administration, they are intended to serve as a supplement to the usual course content. Consequently, it is possible to use anything from a single unit to all of the units, depending upon how much time the instructor wishes to devote to operations research. Due to the structure of the units, it is not necessary for the instructor to lecture on the techniques to be covered, but the learning process will be facilitated by having the instructor available to answer questions and conduct group discussions concerning the topics under consideration. Optimal use of these materials requires having access to a time-sharing computer and several computer terminals. It is also helpful for students to work on the materials in small groups because it is conducive to problem solving. In addition, a minimum of two class sessions should be devoted to each unit, since approximately 6-8 hours are necessary to go through each of the units. With the additional participation of the instructor, it is anticipated that the results of instruction should be even more positive.

When the DM/DM materials are used in inservice training or a workshop, a large variety of instructional configurations is possible. The three most probable configurations will be discussed here. The first is a 1-day inservice training session for practicing administrators. Here it will probably be most appropriate to concentrate on only one technique, since about 6-8 hours will be required. Again, computer access must be arranged for and terminals must be available. It is also assumed, in this situation, that the presence and participation of the instructor is particularly important. The most successful use of the materials in this situation would probably be a combination of lecture, discussion, group work, and self-study. These same cautions and conditions will also be true of 1- or 2-day workshops. The second alternative is the long-duration workshop in which the entire set of DM/DM materials is used. This is a period of concentrated study in which each of the four techniques would occupy 1 day of study. Again, leadership is important to the success of the workshop, even though the materials are designed to be largely self-instructional.

The third method of product use is in the self-study mode. The materials were designed so that individuals interested in using operations research in education could learn the use of some techniques by working through the booklets, however, in this mode additional assumptions are made about the user. In using some of the units, the mathematics is moderately complex. If an individual is to be entirely independent, a good background in mathematics is necessary. Also, in order to effectively use the computer as a learning tool, it is necessary to be somewhat familiar with the operation of a computer terminal and to have some knowledge of how to correct mistakes. In addition, in this mode it is especially important to work through the exercises, since the user has no other source of feedback.

ASSESSMENT PROVISIONS

There are "check your understanding" questions at the end of each unit.

TIME REQUIREMENTS

Approximately 8 hours per unit or 30 hours total are used as part of a typical university course.

IMPLEMENTATION PROCEDURES

A computer with a BASIC compiler and terminal is needed to implement the product.

ASSURANCES AND CLAIMS

Assurances

No danger or hazard was reported during the testing of this course.

Attempts were made to eliminate any bias toward sex, race, religion, age, or socioeconomic stereotypes.

In the minimum mode of instruction, only the book itself is needed for the course. Adaptation of other described modes would require computer access and, therefore, might have more limited replicability.

Claims

The DM/DM materials were tested in the field at three different sites, and revisions were made based on feedback from the users.

RELEVANT EDUCATIONAL APPLICATIONS OF COMPUTER TECHNOLOGY (REACT) COMPUTERS IN EDUCATION: A SURVEY COURSE I: COMPUTERS IN EDUCATION: A SURVEY

A training course to introduce school personnel to the potential applications of computer technology to their field

The REACT computer training courses were developed in recognition of the fact that a degree of "computer literacy" is valuable for all educators today. School administrators face decisions about the most appropriate use of the computer for data management in their school or school district. They need to know what is involved in implementing a data processing system.

Teachers are, or are about to be, faced with decisions concerning the place of the computer in the curriculum, the purposes for which it will be used, how much it will be used, and other related questions. The REACT courses help prepare teachers to make such decisions and to use the computer efficiently in their own teaching.

The main objective of the REACT program is to equip the educator to make competent decisions about the use of computers in administration or in a particular subject area. This objective is accomplished by providing a background in basic computer concepts, some experience in programing a computer, an appreciation of the social impact of the computer, and hands-on experience with administrative and instructional applications.

SUBJECT AREA(S)

Educational computer technology.

INTENDED USERS AND BENEFICIARIES

Educators who are interested in using computers in administration, or in subject areas.

GOAL(S) OR PURPOSE(S)

Goal of this course is to provide administrators, teachers, curriculum specialists, and undergraduage and graduate education majors with an introduction to computers. Educational uses of computers are presented in the broader context of the study of elementary computer concepts and the role of the computer.

PATTERNS OF USE

The 10 books comprising the course can be purchased and used individually, or they can be ordered in course sets. They can be used as texts in a university education curriculum, in an inservice class for educators, or in an individual study program.

Each book contains a list of objectives to help direct the reader. Also, in many of the books, the introduction lists special equipment or supplementary materials that are needed. Success in the course depends upon use of the required equipment and practice in solving the problems that are presented.

Many of the books involve some work on a Teletype terminal. In book 4 of course I, the student learns to use a teletype.

After reading each book, students evaluate their comprehension by taking the self-quiz. If students score less than 80 percent, they are asked to review, paying particular attention to the points they missed. The suggested bibliography guides students to helpful supplementary resources.

ASSESSMENT PROVISIONS

There is a self-quiz with each unit. The 10th book in the series contains unit tests for the total course.

TIME-REQUIREMENTS

Approximately 30 hours.

IMPLEMENTATION PROCEDURES

Special equipment:
Computer with BASIC compiler.
Computer terminal/ASR 33 teletypewriter or equivalent.
Special services:
Computer expert available to answer questions.
Organizational requirement:
More success has been realized when these materials have been used as part of a formal course, rather than in a self-instructional mode.

ASSURANCES AND CLAIMS

Assurances of Harmlessness

No known harmful effects were noted by the observers of these materials during field-test situations, nor have any been reported since the product has been in the field.

Assurances of Social Fairness

The materials have not been analyzed for racism or sexism.

Assurances of Replicability or Transportability

The materials are designed to be used with a computer and computer terminals but they are also being used without computer access. Therefore, they can and are being used where computer systems are available, as well as in regular classroom situations.

Claims of Careful Product Development

These materials went through field testing. User feedback was used as a basis for revising materials.

Claims of Effectiveness

The data show that 71 percent of the students achieved an average score of 70 percent or better for all manuals in self-instructional mode. Data for the group presentation class show that 72 percent of the students achieved the same success rate. Apparently, the mode of presentation does not contribute significantly to success and the materials adapt well to either mode.

Wherever tests were conducted, it was found that the greatest need for assistance always arose during set-up: In orienting the coordinator, supplying materials and tests, and establishing procedures. After set-up, any problems that arose could be handled by telephone.

It was established in interviews with the local coordinators that the initial set-up problems could be taken care of, for the most part, by an adequate "set-up manual" or user's guide, plus an initial visit from a developer. This new manual is an outcome of these needs.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Set of 10 books	1 set per student	20.50 per set	Consumable yearly	
Teletypewriter	1 per 6 students	125.00 rental per month	N/A	Implementer
Computer with a BASIC compiler	1	Depends on system. About 2 hours terminal connect time per student	N/A	Implementer

Note: It is desirable to have a trained computer specialist available to consult on questions from time to time.

RELEVANT EDUCATIONAL APPLICATIONS OF COMPUTER TECHNOLOGY FOR TEACHERS (REACT) COURSE II: TEACHERS: COMPUTER-ORIENTED CURRICULUM

A training course to provide teachers with specific examples of methods of integrating computer technology in business, mathematics, and science curriculums

Course II: Teachers: Computer-Oriented Curriculum is composed of application units in various subject areas. These units include a description of the computer program, rationale for the unit, ways of integrating the unit with the ongoing curriculum, performance objectives, and suggestions for a sequence of class activities during use of the unit.

SUBJECT AREA(S)

The subject area is computer technology as it is related to business education, English, mathematics, science, and social studies.

INTENDED USERS AND BENEFICIARIES

Elementary, secondary, and junior college teachers are the intended users.

GOAL(S) OR PURPOSE(S)

The units of the REACT course were designed to give teachers several examples of units that they might use in their courses and to stimulate thinking in the direction of other possible ways in which the computer could be used to enrich the curriculum.

PATTERNS OF USE

The eight books comprising the curriculum can be purchased and used individually, or they can be ordered in course sets. They can be used as texts in university education curriculum, in an inservice class for teachers, or in an individual study program.

Each book contains a list of objectives to help guide the student through the reading. Where appropriate, the introduction lists special equipment or supplementary materials that are needed.

ASSESSMENT PROVISIONS

There is a self-quiz with each unit and the seventh and eighth books contain tests and answers.

TIME REQUIREMENTS

Approximately 30 hours of instruction are required.

IMPLEMENTATION PROCEDURES

The following are needed to implement this program:

1. Special equipment—Computer with BASIC compiler and computer terminal/ASR 33 Teletype or equivalent.
2. Special services—Computer specialist available to answer questions.
3. Organizational requirements—It should be noted that more success was realized when these materials were used as part of a formal course or with individual study under a tutor than with use through total independent study. (See "Patterns of Use.")

ASSURANCES AND CLAIMS

Assurances

No known harmful effects were noted by the observers during field test situations, nor have any been reported since the product has been in the field.

The materials have not been analyzed for racism or sexism.

The materials are designed to be used with a computer and computer terminals, but they are also being used without computer access. Therefore, they can be used and are being used where computer systems are available, as well as in regular classroom situations.

Claims

These materials went through field testing, and user feedback was used as a basis for revising materials.

The data show that 71 percent of the students achieved an average score of 70 percent or better for all manuals in self-instructional mode. Data for the group presentation class show that 72 percent of the students achieved the same success rate. Apparently, the mode of presentation does not contribute significantly to success and the materials adapt well to either mode.

Whenever tests were conducted, it was found that the greatest need for assistance always arose during setup—in orienting the coordinator, supplying materials and tests, and establishing procedures. After setup, any problems that arose could be handled by telephone.

It was established in interviews with the local coordinators that the initial setup problems could be taken care of, for the most part, by an adequate setup manual or user's guide, plus an initial visit from a developer. This new manual was written to meet this need.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Set of 8 books	1 set per student	18.60 per set	Consumable yearly	
Teletypewriter	1 for each 6 students	125.00 rental per month	Not available	Implementer
Computer with a BASIC compiler	1	Depends on system; will use about 2 hours of connect time per student	Not available	Implementer

Note: A trained computer expert is helpful, if available.

RELEVANT EDUCATIONAL APPLICATIONS OF COMPUTER TECHNOLOGY FOR ADMINISTRATORS (REACT) COURSE III: COMPUTER APPLICATIONS FOR ADMINISTRATORS

A training course to allow administrators to examine the benefits and limitations of a computerized data management system

Course III: Computer Applications for Administrators permits administrators to examine the concept of data management systems by utilizing a demonstration system constructed for a model school. The units are: Introduction, School Administration With Computers; Attendance, Grades, Student Records; Staff File Reports and Inquiry; Financial Accounting; Facilities and Materials Accounting; Salary Negotiations; Planning, Programing, Budgeting; MIDAS Reference Manual; MIDAS Listings; and Administrative Applications: Unit Tests.

SUBJECT AREA(S)

The subject area of this product is computer technology in educational administration.

INTENDED USERS AND BENEFICIARIES

Administrators of educational institutions are the intended users.

GOAL(S) OR PURPOSE(S)

The units of the REACT course were designed to give educational administrators an understanding of how the computer is being used in assisting in educational decisionmaking and to give insights into how computer applications work to stimulate new and better ways of using computers in educational institutions.

PATTERNS OF USE

The 10 books comprising the course can be purchased and used individually, or they can be ordered in course sets. They can be used as texts in a university education curriculum, in an inservice class for administrators, or in an individual study program.

Each book contains a list of objectives to help guide the student through the readings. When appropriate, the introduction lists special equipment or supplementary materials that are needed.

ASSESSMENT PROVISIONS

There is a self-quiz with each unit and the 10th book contains tests and answers.

TIME REQUIREMENTS

Approximately 30 hours of instruction are required.

IMPLEMENTATION PROCEDURES

The following are needed to implement the program:

1. Special Equipment—Computer with BASIC compiler and computer terminal/ASR 33 Teletype or equivalent.
2. Special Services—Computer specialist available to answer questions.
3. Organizational Requirements—It should be noted that more success was realized when these materials have been used as part of a formal course or with individual study under a tutor than when used through total independent study. (See "Patterns of Use.")

DESIGNING INSTRUCTIONAL PROGRAMS

A training package for team activities in workshops, college courses, and school settings

Designing Instructional Programs is a training package designed for team activities in workshops, college courses, and school settings. It consists of an educational game, a coordinator's handbook, and a two-part participant's handbook designed to assist school staff in making defensible choices about the form and content of instructional programs. The material is presented in five modules:

1. Chalk talk—An educational game played by three teams of three or four people Each team goes through the step-by-step process of designing an instructional program for a subject area and grade level chosen by the team. There is a scoring system for the game so that a team can "win," but the real purpose of the game is to introduce the participants to the total design process and stimulate interest in the subsequent modules.
2. Analyzing basic assumptions—Participants and teams identify the assumptions that underlie their instructional planning, justify their assumptions to members of other teams, and reach a team consensus on the assumptions to be used in planning an instructional program.
3. Matching programs with goals—Planning teams analyze and organize the goals and objectives to be met by an instructional program and make judgments about the program characteristics appropriate for meeting these goals and objectives.
4. Assessing resources and constraints—Participants work through a set of simulated instructional planning problems focused on the task of estimating program costs, considering possible cost trade-offs, and considering staff and community resources and constraints that could affect the success or failure of a program.
5. Selecting curriculums—Participants are prepared for and practice the use of an instructional planning tool for analyzing and comparing different curriculums that might be adopted or adapted to meet program objectives. The "Curriculum Analyzer" in this module can be used for assessing the strengths and weaknesses of actual curriculums.

SUBJECT AREA(S)

The general subject area of this unit is instructional planning—that area of educational administration concerned with providing educational opportunities for children. This area may be further defined as involving the establishment of instructional program purposes, the design and implementation of programs, and the evaluation of instructional programs. The materials in this unit are directed to the second of these three functions.

INTENDED USERS AND BENEFICIARIES

The unit is designed for school personnel directly concerned with the design or selection of school curriculums to be implemented in classrooms—building principals, department heads, district curriculum specialists, and teachers serving on curriculum committees. The intended user group is best defined by function rather than particular role or title; the group could include nonadministrative staff, board of education members, and parents and students.

GOAL(S) OR PURPOSE(S)

The goal of the unit is to assist in the preparation of school staff in making defensible choices about the form and content of instructional programs. The general objectives of the unit are to provide experiences in the process of analyzing basic assumptions about students and learning with the necessary tools, the matching of program characteristics with intended learning outcomes, a consideration of the resources available for and the constraints imposed on program as designed, and the analysis of existing programs that might be useful.

PATTERNS OF USE

The modules in the unit were designed for a set cycle, but a different sequence or starting point may be selected depending on the type and intent of participants. For example, a professor of education offering the training in the context of a graduate course in educational administration may want to use only part of the materials.

The unit has been used successfully in 3-hour sessions meeting once or twice a week for an extended period, in full-day workshops for 2 or 3 consecutive days, and in less structured periods where some of the materials were homework. The schedule may be based on the suggested times for each activity presented in the coordinator's handbook; in some cases individual reading and work can be completed at home to save class time for group activities.

ASSESSMENT PROVISIONS

The unit is designed primarily for decisionmakers who see a need for upgrading the quality of instruction as well as for those who "manage" others in performing tasks in instructional design. It should be stressed, however, that knowledge or proficient instructional planning amd management is not required for participation.

Self-tests with suggested responses are provided throughout the program for users to evaluate their progress and general knowledge. Evaluation of individual performance is done by other team members. At the end of each activity contained in the modules, teams may discuss problems or questions that have arisen during each session.

TIME REQUIREMENTS

If the unit is used as the developers intended, it should take about 15 hours to complete; Five 3-hour sessions with each session devoted to one module. This time requirement is highly flexible, and the scheduling of the unit depends on the nature of the group.

IMPLEMENTATION PROCEDURES

The unit does not require any special materials or equipment for its use. Scheduling requirements will be contingent on the needs of the particular group working with the unit.

ASSURANCES AND CLAIMS

Components of the materials were initially developed and tested separately. Modules 1 and 2 were tested on at least three separate occasions as prototypes and have since been tested five times with various types of school user groups. Modules 3, 4, and 5 have been tested five times in workshops and local school districts. The total number of test participants was approximately 200. The materials have also been reviewed independently by experts in currikulum and instruction. The wide testing and reviewing indicate that the unit is easily replicable and transportable. A careful examination of the materials does not reveal any social, ethnic, or sexual stereotyping or bias. None of the external evaluation reports suggests that the product is in any way harmful.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Full set of materials including game, coordinator's and participants' handbooks	1 set per 10 participants	35.00 per set; 11.75 for each additional pair of manuals	Game and coordinator's handbook reusable; parts of other handbook consumed during unit work

DIAGNOSTIC SURVEY FOR LEADERSHIP IMPROVEMENT (DSLI)

A 52-item survey for assessing discrepancies between staff and student needs and organizational demands

The *Diagnostic Survey for Leadership Improvement* (DSLI) is based upon the theoretical model developed by Rensis Likert, who has been conducting research in industry and schools about leadership (management) systems which contribute to organizational effectiveness. Likert claims that organizations too often secure measurements dealing only with end-result variables, such as profit in industry and student achievement in schools. There are two other sets of variables, "causal" and "intervening," which directly affect end-result variables and, consequently, should also be examined. All three sets of organizational variables are defined by Likert in his book, *The Human Organization: Its Management and Value* (1967).

"Causal variables include the structure of the organization and management's policies, decisions, business and leadership strategies, skills, and behavior.

"The intervening variables reflect the internal state and health of the organization, e.g., the loyalties, attitudes, motivation, performance goals, and perceptions of all members and their collective capacity for effective interaction, communication, and decisionmaking."

"The end-result variables reflect the achievements of the organization, such as its productivity, costs, scrap loss, and earnings" (Likert, 1967, p. 29).

The 52 items in the DSLI are designed to diagnose the discrepancies and the intensity of these discrepancies as relates to the "is's" and "should be's" of the items in defined organizational processes. The basic assumption undergirding the diagnosis is one stated by Chris Argyris in his book, *Integrating the Individual and the Organization* (1964): "The organization will tend to develop unintended consequences when there is a lack of congruency between individual needs and organizational demands" (Argyris, 1964, p. 67).

By determining where there are incongruencies between organizational demands (causal variables) and individual needs (intervening variables), the school organization can develop intervention strategies which when implemented will result in a more efficient operation concerning the way people work together in schools. These incongruencies are diagnosed for the students, teachers, and administrators at the teaching, department, school, and overall system levels.

SUBJECT AREA(S)

The DSLI is a diagnostic survey which has been developed to diagnose problems in the "causal" and "intervening" variables. The items in the survey have been developed to diagnose breakdowns in the following organizational processes operating at various levels (from the classroom to the central office) in the school operation:

1. Communication—The perceived and desired adequacy of the communication process upward, downward, and laterally. (Sample Item-08. Your leaders discuss with you or your peers ways to improve things.)
2. Control—The perceived and desired use of organizational reward and penalty mechanisms to accomplish school tasks. (Sample Item-05. Your leaders use what they know about "how you are doing" to help you improve.)
3. Decisionmaking—The perceived and desired basic structure and method of decisionmaking. (Sample Item-10. You or your peers take part in making decisions which affect you.)
4. Interaction-influence—The perceived and desired practice of individual and group interaction to influence the accomplishment of school tasks. (Sample Item-01. Your leaders have faith and trust in you.)

INTENDED USERS AND BENEFICIARIES

The school is the basic unit of analysis. In any school system, an individual school, any number of schools, or all the schools in the entire system are able to use the DSLI. Each item in the survey has been determined to be on a 4th-grade reading level. This determination of reading level is based on both the Dale/Chall and the SRA formulas. In the national study the DSLI has been used with random samples of students in the 7th, 9th, and 11th grades. It has been used with all professional staff who attend school faculty meetings in elementary, middle or junior high, and senior high participating schools.

Students respond to the leadership patterns of teachers in one of eight specified subject areas (language arts, social studies, science, mathematics, health/physical education/safety, home/industrial arts, vocational education, and fine arts). Students also respond to the leadership patterns of the principal's staff and/or the principal.

Teachers respond to the leadership patterns of their department chairperson. Teachers also respond to the leadership patterns of the principal's staff and/or the principal.

The other certified staff, e.g., assistant principal, counselor, and librarian, respond to the leadership patterns of the principal's staff and/or the principal. They also respond to the leadership patterns of the person directly above the principal in the central office.

The principal responds to the leadership pattern of the persons in the school system to whom the principal is directly responsible.

Other potential users are elementary students (5th and 6th grades) responding to the leadership patterns of their self-contained or departmentalized classroom teachers. Slight modifications in the instructions for administration can be made to accommodate the survey for use by upper elementary students.

The ultimate beneficiaries are all members of the school organization. Research in industry and some in schools have indicated that, when people are treated like cogs in a machine, absenteeism, vandalism, grievances, and union activities are also present to a larger degree. By adapting the causal variables to the needs of people in schools, the school organization has greater potential for accomplishing its tasks at higher efficiency levels. It has not been determined whether student achievement (effectiveness) will be influenced by this approach.

GOAL(S) OR PURPOSE(S)

The purposes of this project are: (1) To diagnose the problems which students, teachers, and administrators are having in communication, control, decisionmaking, interaction-influence, and confidence and trust in leadership school organizational processes at the teaching, department, school, and system levels; (2) to determine whether the problems are more or less serious with minority racial groups in the school and with subgroups at the various levels; (3) to provide the 10 most critical items (measured by intensity of difference between the "is" and "should be" responses) of each subgroup at the level surveyed; (4) to give "directions for improvement" (derived from the theoretical framework used) for each "critical item" identified; and (5) to stimulate the development of intervention strategies (based upon the "directions for improvement") by encouraging leaders at each level to develop "action plans" to reduce the intensity of the 10 items identified.

PATTERNS OF USE

Detailed programed instructions, "Instructions for Administering the *Diagnostic Survey for Leadership Improvement* (DSLI)," are able to be used by personnel from within the school being surveyed. It is recommended that the survey be administered by someone in the school who is not one of the leaders being surveyed. Most respondents who have taken the survey have been able to complete it within the recommended time (40 minutes). This time includes passing out the materials, giving the instructions, and responding to all the items.

The information provided can be used as a needs assessment upon which staff development can be based. It also can be used as a basis for teacher accountability as far as teaching methods and classroom activities are concerned and for leadership accountability as far as improving leadership practices is concerned.

Without singling out individual teachers, group decisions can be made by individual teaching departments which should provide peer pressure to improve the interaction patterns with students in classrooms.

Even though superordinates often see problems subordinates are having with their leadership patterns, it is difficult to get improvement made because subordinates can, and often do, perceive situations differently than their superordinates. However, when data are used as a basis for expecting improvement, the subordinate has a difficult time escaping the responsibility for taking action.

ASSESSMENT PROVISIONS

All staff assigned to a school who usually attend professional faculty meetings are the ones who take the survey. It is recommended that all students in a middle grade level (grade 7 for a school with grades 6, 7, and 8; grades 10 and 11 for a school with grades 9, 10, 11, and 12) be used as the student population. Random-sampling procedures for selection of students at a grade level may be used. If a random-selection procedure is used, it is recommended that a minimum of 25 percent of the total students in the entire school be used for each teaching area to be surveyed. Students can be surveyed in each of the eight identified subject areas, or the student survey can be restricted to the four major subject areas (language arts, social studies, science, and mathematics).

The survey should be administered near the end of the second-quarter (or first-semester) operation in any particular year. This permits time in that school year to receive the results and to make action plans for implementing improvement interventions. If a resurvey is desired, plans should be made to readminister the survey approximately 1 year later to all of the staff attending faculty meetings and to students in the same subject areas and at the same grade level as were previously surveyed.

TIME REQUIREMENTS

As mentioned previously, it takes about 40 minutes to administer the survey. The DSLI can be machine scored and reports generated and returned to the school within 1 month after the survey has been completed. A school that gives the survey before Christmas can have the reports back by the end of Janaury. Within the next 2 months (by the end of March), data can be analyzed and action plans developed at each level. Three months after the survey, implementation of action plans can begin.

IMPLEMENTATION PROCEDURES

Action plans, based upon the critical items report at each level (teaching area, department, school, and central office), can be made by the leaders and their staff at each particular level. Staff development inservice activities also can be developed based upon the identified needs generated by the critical items reports.

ASSURANCES AND CLAIMS

Assurances

As of March 1975, the DSLI has been used with a national stratified, randomly selected population consisting of 23 school systems—1 randomly selected elementary school, 2 randomly selected middle schools, and 2 randomly selected senior schools in each of the 23 school systems. The total population involved in the presurvey was approximately as follows: 10,000 students reporting on teachers, 10,000 students reporting on the principal's staff and/or the principal, 6,000 teachers reporting on department heads, 6,000 teachers reporting on the principal's staff and/or the principal, 400 department heads reporting on the principal's staff and/or the principal, 475 other certified (excluding the principals) reporting on the principal's staff and/or the principal, and 600 other certified (including the principals) reporting on the central office leadership.

The same population is being given a postsurvey (February and March 1975) using a slightly modified version of the original survey form. The modifications in the survey are based upon data analyses resulting from the presurvey results.

The project director and staff members have made two onsite visitations to each participating system. The first onsite visits were made to explain the project objectives and to make arrangements for survey administrations. The second onsite visits were made to deliver and to explain the computer reports and how to use them. On the basis of the second visits, refinements were made in the reports to be generated by the postsurveys.

Claims

Until the completion of the project in June 1976, no claims can be made. Comparisons of presurvey and postsurvey results and data analyses will be performed and described in the final report.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
DSLI 8-page machine-scored survey booklet	1 survey booklet for each staff and student respondent for each administration	1.50 per survey booklet (price includes scoring and computer reports)*	Distribution arrangements not yet made	

*Price has not been determined, but price quoted is based upon similar service by ETS for IGI (Institutional Goals Inventory).

AVAILABILITY

Final plans for publishing and marketing have not been completed. Attempts will be made to have the DSLI available for general use by fall 1976.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 140 016

ERNSTSPIEL TASK GROUP COMMUNICATIONS KIT

*An eight-segment kit for developing individual skills
in communications and interpersonal relationships*

The Ernstspiel kit contains eight packets—each focusing on a communication concept or skill. The first six packets deal with the single concepts of one-way and two-way communication, tacit communication, nonverbal communication, bypass communication, overload communication, and written communication. The last two in the series require the participants to incorporate the knowledge and skills learned in the first packages to solve more complex communication problems and interpersonal relationships within a simple organizational setting. The last two packets are group norms and individual versus group.

SUBJECT AREA(S)

Communication skills and task group experiences

Eight common experience units comprise the *Ernstspiel Task Group Communications Kit.*

One-way and two-way communication package, which involves each person as a participant, not as an observer. It attempts to delineate clearly the differences between these two types and to assist participants in identifying uses for each.

Tacit communication, which is commonly found under constrained conditions. This kind of communication relies upon the existence of specific bits of information held in common or inferred from the situation and is used most often as a communication shortcut.

Nonverbal communication, which deals with transmission of information using nonverbal media with emphasis on the problems and factors involved. It also notes how any innovation will undergo change over time and as it passes through adopters.

Bypass communication, which focuses upon the common error of treating all individuals alike. The package uses technical language to provide an experience demonstrating the differences that exist and the feelings of an individual being bypassed. The participants are allowed to reflect on the frustrating experience of attempting to absorb a large quantity of information in a short time.

Overload communication, which occurs when too much information is given in a short period of time.

Written communication, which is a self-awareness package utilizing messages individually prepared by each participant for a given population. A formula is employed to measure the complexity of the message as an indication of its probable effectiveness in reaching the target population.

Group norms, which deals with the reactions of some members in a group toward the behavior of a deviant member.

Individual versus group, which uses two experiences to demonstrate the differing effects of cooperative and competitive conditions. Group and individual behavior, resulting from the two conditions, are the focuses.

INTENDED USERS AND BENEFICIARIES

The range of potential users is broad. Any group entering or anticipating entering cooperative task-oriented arrangements and which has neither the funds, time, nor inclination to use an outside consultant are the intended users. The materials have been used by public school pupils, teachers, Girl Scout leaders, jail inmates, and businessmen.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To provide self-instructional materials for groups which have entered or are anticipating entering cooperative task-oriented arrangements and which have neither the funds, time, nor inclination to use outside consultants; (2) to help groups become aware of the intricate problems of interpersonal communications; and (3) to develop skills in verbal, nonverbal, and written communications.

PATTERNS OF USE

The program is sequenced in the following order: "One-Way and Two-Way," "Tacit," "Nonverbal," "By-Pass," "Overload," "Written," "Task Group Process I," and "Task Group Process II."

ASSESSMENT PROVISIONS

There is no screening of participants prior to the Ernstspiel experience. The kit is based on group members having a common experience and then having participants analyze and discuss this experience; therefore, there is no formal evaluation since it is possible that common experiences may vary with participating groups.

TIME REQUIREMENTS

Each package requires 1 hour or less to complete. The exception will be packets that contain two or more exercises (such as Tacit Communication and Individual versus Group), in which case separate sessions are recommended.

The time required in each case will depend on the participants' desire to explore, to discuss the experience, and to look for applications of the findings to their particular situation. More importantly, it will depend upon the leader's knowledge and familiarity with the materials and the additional information and experiences brought to the group.

If the materials are being used in a workshop, no more than two packets (or exercises) should be given in a 4-hour period. While it is possible to run all eight packages and the evaluation in 2 days, communication overload and fatigue would defeat the purpose.

Summary Cost Information

A limited number of prototype kits are available at a cost of $94.75.

ASSURANCES AND CLAIMS

Assurances

The evaluative information obtained from field trials of the kit indicates that the materials can stand alone in the hands of users and can be successfully implemented without additional outside consultative assistance. In each of the exercises, people will see some things as relevant which others do not. This is an important consideration in the Ernstspiel kit and in all human relations. Each person experiences different things at different times; no two lives are exactly the same. No two people handle problems or stress in the same manner, nor need they.

It has been found that one package may make little or no sense to an individual until it has been discussed or until some later experience triggers the insight. This should not be a point of discouragement but should sharpen awareness of the uniqueness and complexity of the individuals with whom individuals must live. It is also necessary to be cognizant that some do not listen or understand at a particular time, not because they do not wish to, but because of their inability to replace their own perceptions of what is important with what others perceive to be important. The criterion for what is real or important is determined by the individual's perception of it.

Claims

No claims for effectiveness are made beyond outcomes tested earlier.

INTERPERSONAL COMMUNICATIONS (IPC)

A program package kit which focuses on the concepts and skills of interpersonal communications in the classroom, community, and one-to-one situations

The *Interpersonal Communications* system includes 20 units which are approximately 90 minutes each. These exercises are designed to be used in sequence and have a cumulative effect.

Educators are frequently involved with communication behaviors that are focused on in these exercises. It is assumed they do not give them much attention. These exercises bring communication behaviors more clearly into awareness and make explicit certain knowledge about communicating.

Improving skills goes beyond clarifying what is already known. Each exercise involves participants in practicing the behaviors which are described, learning ways to recognize these behaviors, and receiving "feedback" from others concerning use. The emphasis is on learning "to do" as well as on gaining knowledge. Many skills in interpersonal communications involve the personal style of the individual. For example, the exact behavior used in "paraphrasing" is a matter of personal style. Many alternative behaviors, with particular contexts, can meet the criteria which define the skill of "paraphrasing." These exercises provide opportunity for participants to become clearer about their personal styles.

To summarize, the sequence of 20 exercises provides 3 kinds of learning: (1) The participant becomes clearer concerning things to know about interpersonal communications, (2) the participant practices what is done personally in interpersonal communications, and (3) the participant becomes able to recognize more clearly personal styles of communicating with others.

Innovations such as team teaching, modular scheduling, and differentiated staffing increase the need for collaboration at all levels. In the traditional system of self-contained classrooms, most educators have carried out their roles in relative isolation. Many potentially valuable innovations have not been implemented successfully due to issues of influence, polarized conflict, and ineffective communication. Increased interpersonal communications skills of school personnel will reduce at least one hindrance to local improvement efforts. This workshop was designed for teachers, but has been found appropriate for virtually all roles in education.

SUBJECT AREA(S)

Participants focus on the concepts and skills of interpersonal communications—in the classroom, community, and one-to-one situations.

INTENDED USERS AND BENEFICIARIES

Classroom teachers, educational administrators, and community populations are the intended users. This system has also been adapted for industry.

GOAL(S) OR PURPOSE(S)

The purpose of an interpersonal communications workshop is to give participants knowledge and skills of behaviors generally applicable to: Face-to-face communication, one's own unique style of communicating, group and organizational factors which affect that communication, and continued improvement of one's communication skills.

PATTERNS OF USE

These materials are sequentially organized toward the cumulative attainment of the stated objectives. The training design includes much participant interaction for feedback, simulation trials, and interdependent action. For this reason, all participants are required to commit themselves to full attendance at all workshop sessions.

ASSESSMENT PROVISIONS

Interpersonal Communications has been deemed appropriate as an initial experience and, therefore, has no prerequisites. Throughout the workshop, participants evaluate their learning by mutual feedback; self-testing, e.g., paper-and-pencil tests; and skill practice.

TIME REQUIREMENTS

There are 20 sessions in this workshop which compose 30-40 instructional hours. It is recommended that this training be given within a 2-week period.

IMPLEMENTATION PROCEDURES

Setting up a workshop is not complex, but its success and effectiveness depend upon several factors:

1. The participants need to be involved. It is best if they have volunteered to be included in the workshop. It is crucial that they have a correct understanding of what the workshop is about and the way in which it is conducted. It is also recommended that, whenever possible, teams or entire school buildings experience the training together. This can create norms for use of new skills which might not be applied if individuals returned and attempted them in settings where there was little or no support for use of the skills.

The basic work group of the workshop design includes six members. It is important that the total group be a multiple of six. These work groups cannot be smaller than six. Some may have seven or eight people if absolutely necessary, but this is awkward and not advised. It is extremely important that all participants be present for every session of the workshop. The design is sequential and cumulative; many exercises depend on roles for trios and sextets. In many instances, participants train each other using criteria provided in the materials.

One leader may work with a total group as large as 36. It is recommended, however, that the total group not exceed 24. The first time an individual is attempting the leader role, it is advisable that only 12 participants be included.

2. The materials are not intended to be self-explanatory. Thus, all new leaders should experience the workshop materials and design as a participant before attempting the leader role. Reports indicate that cotraining with a leader who has previously conducted the workshop is an additional benefit to the new leader.

3. Adequate time is needed to obtain and arrange all the necessary materials and equipment prior to the workshop. The leader must prepare charts in advance of each session as well as arrange materials to be distributed. Timing for such preparation must be carefully considered. It should be clear who is to be responsible for each task.

4. The workshop site should include a comfortable room large enough to allow groupings of three and six. Comfortable chairs and tables for small groups need to be provided. Refreshments should be available in the room, if possible.

ASSURANCES AND CLAIMS

Assurances of Harmlessness

During a series of trial workshops, participants were repeatedly asked for feedback concerning this system. While many criticisms were used to revise the system, and occasionally individuals stated the system's content or form was not relevant for them, there were no reports from participants, trainers, or implementers indicating physical, psychological, or sociological harm. Thousands of copies have been sold since the system became commercially available over 2 years ago. The developers have received no reports of harm or perceived risk during this time.

Assurances of Social Fairness

Social fairness issues were considered during interim rounds of trial and revision resulting in some early modifications of this system. While the generic "he" is sometimes used when referring to persons of either sex, the system is generally fair and has been positively accepted as such. A review panel of curriculum experts gave it a passing rating.

Assurances of Replicability

This system was designed with the intention that those lacking expertise in its content or in providing experiential learning would be able to conduct workshops. The developers observed such nonexperts successfully conduct workshops at two sites during interim testing. No developers were involved in the seven field test workshops, as second- and third-generation trainees conducted them. Of the field test participants, 31 percent reported that they definitely could conduct the workshop and another 41 percent reported that they would be able to do so if some consultant aid or additional help were available. The widespread use of this system throughout the United States and in several other countries during the past 2 years supports a claim of easy replicability.

Claims of Effectiveness

In addition to interim rounds of testing beginning in 1969, final field tests of this instructional system were conducted in 1972 with 167 volunteer trainees at 5 field test sites. Participants at all workshops except one (referred to as site B) were mainly the K-12 educators for whom the system was developed. The site B group consisted of all male faculty members of a small college who had a high proportion of advanced degrees and were unlikely to be taking the workshop for academic, salary, or tenure credit.

A high degree of satisfaction can be expected from participants who are K-12 educators involved because of appropriate expectations in their needs and the nature of this system. From the target-group workshops in the field test, 92 percent of the respondents reported the training met their expectations, 95 percent would recommend it to a friend, and 97 percent summed it up as worthwhile. From the site B workshop, 37 percent reported the training did not meet their expectations, 12 percent would not recommend it to a colleague, and 5 percent did not find the experience worthwhile.

Participants from a K-12 target group involved in an appropriate manner can be expected to generally perceive this training as relevant and useful. Over 85 percent of the participants were positive on all but one questionnaire item (81 percent on that one item) at the end of the workshop. Perceived applicability and personal importance were rated even higher on a followup questionnaire administered 6 months after the workshop.

Participants can be expected to make significant cognitive gains from a workshop using this system. Participants in the field test showed an average gain of 20.2 points (maximum score was 108) on a cognitive test. Seventy percent of the precognitive/postcognitive gain was retained when measured 6 months later. On a followup paper-and-pencil behavioral episode test, 94 percent of the respondents were able to identify at least one communications problem, 89 percent were able to give an appropriate response to the situation presented, and 83 percent accurately described a participant's behavior.

Audiotapes were anlayzed for incidence of five behavioral skills trained for in the workshops. When compared to a group with high experience in interpersonal training and a group with low experience, the test population fell between these two comparison groups after their training.

Some increase of behavioral skill may be expected from use of this system, although its developers caution that "back-home" contextual variables may be an important intervening factor.

Claims of Careful Product Development

This system was developed over a 3-year period involving repeated rounds of trial and revision with K-12 target group representatives. Evaluation included pilot trials, interim formative testing, and a summative field test in which the system's developers were not involved.

INTERPERSONAL INFLUENCE

A 20-unit training program designed to increase participant awareness of the consequences of personal communications style on the process of interpersonal influence

Interpersonal Influence is a low-cost, mass-diffusable, competency-based instructional system which includes all materials and procedures for conducting 30 hours of instruction. Organized into 20 instructional sequences or units, it is conducted as an inservice workshop or preservice course for educators.

Each unit in the series has one or more objectives which contributed to the achievement of the overall objectives. These objectives are presented with each unit.

The series of 20 exercises on interpersonal influence has 3 major dimensions: (1) Learning basic concepts about the process of interpersonal influence, (2) identifying one's characteristic styles of using and responding to interpersonal influence, and (3) practicing basic skills of interpersonal influence.

The first dimension provides the opportunity to become more knowledgeable about what is involved in the process of interpersonal influence. Participants will discuss the ideas and derive implications for their own personal style of relationships.

The second dimension will produce an increased awareness of the consequences of one's personal style of relating to others for the process of inter- personal influence. The outcome should be a greater ability to be more explicit about what is desired and acceptable in relationships involving influence.

The focus of the third dimension is a "do it" emphasis. The exercises include opportunities to identify described behaviors, to practice these behaviors, to assess their effects, to receive feedback from others in the group.

This series provides a setting in which issues of interpersonal influence are raised and dealt with. The gained knowledge and skills should enable the participants to be more aware of their own characteristic style of behaving in the influence process. They will then be able to distinguish more clearly among interpersonal influence issues and other interpersonal interaction issues.

During the 20 units of this workshop, participants experience a variety of ways in which they may learn about interpersonal influence. There are written definitions, descriptions, and films and tape recordings to illustrate behaviors of present dilemmas. There are times for reflecting on experiences and ways of doing things; times for discussing ideas, expenses and possible meanings; techniques for observing and analyzing behavior. There are opportunities to share observations with others and to ask for observations and reactions. There are some simulation, task performance and role playing situations in which participants can tryout behaviors.

The system is divided into three parts. In part one, the basic concepts and tools for understanding interpersonal influence are introduced. In part two, attention is paid to characteristic patterns of responses in which the individual engages whenever accepting influence or exerting influence. Part three is concerned with how selected group phenomena influence group development.

SUBJECT AREA(S)

This system is designed to prepare the participants by giving them the concepts and skills necessary to function in the realm of interpersonal influence.

INTENDED USERS AND BENEFICIARIES

Participants include all educational personnel who have an interest in interpersonal influence and who volunteer for the training.

GOAL(S) OR PURPOSE(S)

The activities called for in the instructional system are designed to provide the: (1) Ability to identify and explain the major ideas that describe the process of interpersonal influence as presented in the system; (2) capability for using guidelines provided to diagnose and analyze forces and effects of influence in selected interpersonal and group situations; (3) ability to identify and make judgments about one's characteristic influence styles; (4) ability to identify extent and nature of one's own need to influence; and (5) capability for identifying ways in which principles learned and guidelines utilized in the workshop may be applied in settings other than the workshop.

Each unit in the series has one or more objectives which contributes to the achievement of the overall objectives. These objectives are presented with each unit.

PATTERNS OF USE

These materials are sequentially organized toward the cumulative attainment of the stated objectives. The training design includes a great deal of participant interaction for feedback, simulation trials, and interdependent action. For this reason, all participants are required to commit themselves to full attendance at all workshop sessions.

ASSESSMENT PROVISIONS

Interpersonal Influence has been deemed appropriate as an initial experience and, therefore, has no prerequisites. Throughout the workshop, participants evaluate their learning by mutual feedback, self-testing, e.g., paper/pencil tests, and by skill practice.

TIME REQUIREMENTS

This system has 20 units organized into 30 hours of instruction. It can be conducted as either a preservice class or an inservice workshop.

IMPLEMENTATION PROCEDURES

An interpersonal influence workshop can be successfully conducted with as few as 10 and as many as 36 participants. The instructional system is designed for basic learning groups of six, although each learning group could have as few as five or as many as seven members. The workshop needs to have at least two learning groups to ensure an interesting and productive experience for participants.

A workshop leader gives instructions from a manual and guides participants through the training program. The leader needs to be familiar with the materials and design, but does not need to be an expert in the interpersonal influence process.

All new leaders should experience the workshop materials and design as a participant before attempting the leader role. Initial cotraining with a leader who has previously conducted the workshop is an additional benefit to a new leader. Leaders without extensive experience in design should be cautioned concerning possible revisions, additions, deletions, or defense of this process as "the only way."

The workshop site should include: Comfortable room, preferably carpeted, large enough to allow groupings of five to seven to work without interfering with each other; comfortable chairs and tables for small groups; and beverages and refreshments available in the room, if possible.

ASSURANCES AND CLAIMS

Harmlessness

During a series of trial workshops, participants were repeatedly asked for negative feedback concerning the system. While criticisms were used to revise the system, there were no reports of physical, psychological or sociological harm from participants, trainers, or implementors.

Social Fairness

Social fairness issues were considered during interim rounds of trial and revision, resulting in some early modifications of this system. Guidelines suggested by the NIE program monitor were followed in efforts to eliminate sex bias. A review panel of curriculum experts gave it a passing rating.

Replicability

This system was designed with the intention that nonexperts in its content or in providing experiential learning would be able to conduct workshops. A study was conducted of second-generation trainers conducting the workshop under three different condition (training alone, without supervision; training alone, with supervision; and training with teams, without supervision). There were no significant differences in outcomes for participants of these trainers concerning workshop relevance, utility, satisfaction, scores on cognitive tests, or participant perceptions of the capabilities of the trainers. These data support the claim of ease of replicability of workshops using this system.

Effectiveness

Results are available from an interim field-trial evaluation report and a followup survey of participants trained in *Interpersonal Influence*. A final impact study is still being completed in 1975. The interim field test involved 22 subjects who served as trainers for the instructional system and 216 subjects who served as participants in the 16 interpersonal workshops. Followup questionnaires were obtained from the participants 4 months after their workshops. Data from these workshops provide the following results: (1) Ninety-seven percent of the participants responded positively to a question indicating that they had found the workshop worthwhile and 92 percent indicated that they would recommend the workshop to a friend; (2) field test participants indicated the workshop was both relevant and useful upon concluding it and again, 4 months later; (3) significant cognitive gains were achieved on a locally-developed test. The mean of pretest scores of 20.08 rose to a mean of 29.8 on the posttest; (4) on the followup questionnaire, 92 percent of the respondents reported some increase in awareness of influence behaviors in their "back home" setting; and (5) participants were able to identify application of specific concepts and skills from the workshop in their "back home" settings.

Product Development

This system was developed over a 3-year period involving repeated rounds of trial and revision with K-12 teachers and administrators. Evaluation included pilot trials, interim formative testing, and summative field test with an impact study being completed during 1975.

ORGANIZATION DEVELOPMENT: BUILDING HUMAN SYSTEMS IN SCHOOLS

An introduction to organizational development theory and practice

Organization Development: Building Human Systems in Schools is a 50-page booklet introducing the conceptualization and strategy of organization development to professional or lay readers. The contents are divided into sections which present theory, discuss activities and techniques, describe a training sequence, and include a short bibliography.

The booklet provides easily understood information about organization development based on systems theory. *Organization Development* is for groups or faculties who realize that the quality or result of an educational program depends on the quality of the people-with-people interaction that makes the program work. It is the human involvement and commitment in the interpersonal community—not the formal rules and procedures—that make a school run efficiently. *Organization Development* aims at helping people in schools develop increased interpersonal competence in carrying out their educational program together.

This booklet is not a guide to consultant work but does familiarize readers with many ideas and practices in consultation. It could be used as a basis for discussion by administrators or staff considering organizational development as a way to bring about changes in their school.

SUBJECT AREA(S)

Organization Development (OD) discusses the following topics: (1) A view of schools and the process of change, (2) organizational development helps schools become self-renewing, (3) organizational development can be a permanent part of a self-renewing school district, (4) organizational development makes a difference, (5) the stages and a sample training sequence in OD, (6) individuals and programs concerned with organizational development in schools, and (7) writings and references of interest.

INTENDED USERS AND BENEFICIARIES

School staffs, students' parents, and community people who want an introduction to the concepts and practice of OD in schools are the intended users and beneficiaries.

GOAL(S) OR PURPOSE(S)

The goals of this publication are to present information and to stimulate discussion about organizational development in schools.

PATTERNS OF USE

It should be used alone or in conjunction with the audio/slide presentation, *"Organization Development in Schools."*

TIME REQUIREMENTS

It should be read individually. The booklet can be the basis for one session of group discussion.

ASSURANCES AND CLAIMS

The product does not perpetuate social biases and is transportable. It informs and provides a base for discussion.

ORGANIZATION DEVELOPMENT IN SCHOOLS (AN AUDIO SLIDE PRESENTATION)

A slide show on how the school community can serve as a source of innovative programs in the schools

This slide show, *Organization Development in Schools*, consists of slides for a carousel projector and an accompanying cassette tape. It is supplemented by the booklet *Organization Development: Building Human Systems in Schools*, but it can be used alone.

The slide show presents the idea that the people most directly concerned with the school—the staff, students, parents, and citizens—have much of the knowledge and skill needed to create and implement many new programs.

SUBJECT AREA(S)

The subject area is organization development in school settings, stating that the people most affected by school problems are the best ones to work out and implement solutions.

INTENDED USERS AND BENEFICIARIES

The intended users are school staffs, students, parents, and community people who want an initial understanding of organization development.

GOAL(S) OR PURPOSE(S)

The purpose of this program is to give a simple introduction to organization development in school settings.

PATTERNS OF USE

This product can be presented in a single showing to an interested group. It is designed to be supplemented by the booklet *Organization Development: Building Human Systems in Schools*. It is suggested that the slide show be followed by opportunity for questions and discussion.

TIME REQUIREMENTS

One meeting (30 to 60 minutes), depending on discussion time is required.

ASSURANCES AND CLAIMS

The slide show and accompanying cassette tape do not perpetuate social biases and are transportable. The material will stimulate questions and discussion.

PROJECT MANAGEMENT BASIC PRINCIPLES

A multimedia, self-instructional package to improve school-personnel-project-management techniques

Project Management Basic Principles is a training product that teaches school district staffs to plan, implement, operate, and terminate an educational project and to attain project objectives within the given time, cost, and performance constraints. Any school personnel likely to be assigned responsibility for managing an improvement project would find this product useful. This includes project staff, school administrators, school district central office staff, undergraduate and graduate educators, community agencies' personnel interacting with schools, and supportive staff agencies such as State departments of education having liaison with local schools.

The product does not purport to provide complete training for a project manager. For example, the development of human relations skills is not treated. Rather, the product concentrates on the improvement of the tools or techniques of project management.

Specific areas covered by the product are: Defining the project goal, developing the project work breakdown and workflow diagram, preparing time estimates, estimating and scheduling resources, developing the project budget, planning project "startup," developing an information system and a procedures handbook for the project, monitoring project operations, problem solving through management action, implementing any changes in project operations, and developing a project termination plan.

The product consists of 3 looseleaf notebooks divided into 12 lessons. There are also 12 filmstrips and 12 synchronized tape cassettes. The notebooks include a manual to guide self-study and a case simulation which enables users to role play and practice the knowledge and skills presented in the lessons. Materials also include user management instructions, learning objectives, a content script, exercises, examples, and self-assessment instruments. In each lesson, the learner has an alternative of viewing the filmstrip, reading the content script, listening to a tape, or a combination of these. The product provides a mixture of individual and group activities. Each of the lessons can be easily modified to apply to a wide range of school district projects or program activities.

SUBJECT AREA(S)

Planning and administration.

The product emphasizes the development of user knowledge and skills required to effectively manage a project in a school district setting. These skills allow the user to perform such management tasks as: (1) Developing a project plan including work structure, workflow diagram, time estimates, and a budget; (2) preparing for the startup of a project; (3) monitoring the operation of a project; and (4) handling the termination or orderly transition of a project into an ongoing program.

INTENDED USERS AND BENEFICIARIES

The training product is intended for use by project staff personnel, school administrators, school district central office staff, undergraduate and graduate educators, community agencies' personnel interacting with schools, and supportive staff and agencies such as State departments of education having liaison with local schools.

GOAL(S) OR PURPOSE(S)

The goal of the product is to help school districts manage projects more effectively, thereby meeting time, cost, and performance expectations for their school improvement efforts. This is accomplished by providing users with the knowledge and skills necessary to plan, prepare, operate, and terminate a project.

PATTERNS OF USE

The material is self-contained and requires no specially trained individual for use. Lessons are grouped into four phases according to the lifespan of a project and usually are studied sequentially.

The material, however, is quite flexible and, as a result, can be adapted to a variety of school district needs. This can include the development of different management skills or the adaptation of the materials to special kinds of projects in school districts of varying complexity. Consequently, users may choose to obtain consultation or assistance from the developer.

ASSESSMENT PROVISIONS

Evaluation instruments are interspersed throughout the product lessons. Students assess their own performance using criteria provided in the lessons. The case simulation included in the materials provides for group or individual performance of the management tasks learned and feedback on that performance.

TIME REQUIREMENTS

The time required to study the materials varies from 24 to 40 hours, depending on the study options selected.

IMPLEMENTATION PROCEDURES

No specially trained individuals are required for a district to use the product. It is recommended, however, that one person coordinate the training of the other staff members. Also, it is recommended that top-level administrators in the district use *Project Management Executive Orientation* before other staff are trained in the use of this product. In this manner, the users will have the support necessary for implementing many of the procedures they learn into their day-to-day work.

Many users have found it beneficial to view lesson audiovisual presentations for a second time or to refer to printed lesson material during the course of their project management work in the district. Therefore, it is recommended that the materials be kept readily available to project managers after the initial training sessions.

Summary Cost Information

If, for example, a district chooses to train 10 project managers using the audiovisual and printed materials, then the cost would be $60 for 1 set of filmstrips and accompanying cassette tapes, and $200 for 10 sets of volumes I, II, and III—yielding a total of $260. The cost of training other project managers in subsequent years would be less since the audiovisual materials are reusable.

Personnel Required for Product Adoption and Implementation

The product can be used by an individual or group of district staff without previous training in project management or educational administration. Districts may choose, however, to obtain consultation or assistance from the developer for initial staff training or adaptation of the materials to special needs. Costs for different services can be obtained from the developer.

ASSURANCES AND CLAIMS

Assurances

The subject of the product is rational management procedures for use by school district administrators/project managers. This emphasis minimizes the chance of harm resulting from use. The developer has not received any reports of harm associated with the use of the product.

Steps have been taken to insure that the product excludes social bias. During the pilot and field testing of the product, school district personnel brought incidences of bias to the attention of the developers. As a result, changes were made to both the audiovisual and printed materials.

The product has been used by school districts of various sizes in different regions of the United States with comparable results in terms of the user's improved ability to perform project management tasks associated with planning, preparing, operating, and terminating a project. Users have been able to continue training staff without the assistance of the developer.

Claims

The product increases the ability of project managers in local school districts to perform the project management tasks of each of the phases in the project management process. This claim is based on a summative evaluation conducted during 1973 involving several school districts in different States.

Particular attention has been given to the quality of the product's content and instructional process. Product development involved the steps of analysis, conceptualization, design, construction of prototype, pilot testing and revision, field testing and revision, and summative evaluation. The steps of analysis, conceptualization, and design involved a task analysis of project management in schools, a review of literature on project management and instructional system design, and consultation with experts in project management and instructional system design. The construction of the prototype involved the developer and project management expert in the writing of lesson material. The pilot testing, field testing, summative evaluation, and revisions of the product involved project managers from school districts in several States and many other knowledgeable educators. This developmental process has been carefully documented.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Project Management Basic Principles				
Vol. I	1 per student	7.50	Consumable	
Vol. II	1 per student	7.50	Consumable	
Vol. III (case simulation)	1 per student	5.00	Consumable	
12 filmstrips and 12 cassette tapes (optional)	1 per class	60.00	Reusable	

Note: If the optional filmstrips are used, a cassette tape recorder, a filmstrip projector, and viewing screen are necessary. These are generally available in school districts.

PREPARING EDUCATIONAL TRAINING CONSULTANTS: SKILLS TRAINING (PETC-I)

Two-week workshop to train participants in diagnosing individual and group needs in the process skills of goal setting, communicating, and decisionmaking

PETC-I, the first in the series of three PETC systems, is constructed to be a prerequisite to the other two programs. The intended relationships among the PETC systems are shown under "Patterns of Use." The PETC-I trainee is expected to be able to work with small groups to assist in improving process skills such as goal setting, problem solving, communicating, influencing, and decisionmaking.

The PETC-I system is a 2-week workshop that is organized into two parts. The first part of the program consists of a 1-week training program during which the PETC-I trainees (skills trainers) study the basic concepts of the instructional system. Also during the first week, the skills trainers are provided with a series of exercises to practice group-skills training. The PETC-I workshops are conducted by senior trainers who meet specified criteria.

The second part of the workshop is a practicum for the skills trainers. During the practicum, the skills trainers form trios and each trio works with a group of 12 to 24 people. The second training week is referred to as the *Group Process Skills* (GPS) workshop, and the second set of participants are called GPS trainees. These sessions, which are conducted over a 5-day period, are designed to allow GPS trainees to obtain training in group-process skills from the trio of skills trainers. The techniques and strategies of group-process exercises are applicable to any group of people for whom the materials are new. For this reason, no prerequisite skill level has been stated for a GPS participant. It is anticipated that a wide range of skills will appear in any group with which the skills trainers work. The only requirement for GPS participants is that they commit themselves to attend each session of the group-process skills workshop.

SUBJECT AREA(S)

PETC-I is designed to train participants in diagnosing individual and group needs in the area of process skills such as goal setting, communicating, influencing, or decisionmaking. In addition, this workshop prepares the participant to function as a skills trainer to conduct group-process skills workshops.

The materials for the sessions consist of a book of theory papers and training materials for the skills trainers, a book of theory papers for the GPS trainees, a GPS trainer's manual used by the skills trainers, and a book of group skill exercises used by the skills trainers during the GPS workshop.

Throughout the entire two-part workshop, the Do-Look-Learn approach is used. First, the participant is involved in DOING something which will provide a common activity for all workshop members to LOOK at. LEARNING follows by examining what happened in the activity and linking it to similarities and differences within one's own organization.

INTENDED USERS AND BENEFICIARIES

The first part of this system is intended for use with educators at any level who wish to acquire consulting skills for training others in group process and interpersonal skills. The second part of this workshop is intended for use by classroom teachers, aides, support staff, parents, and others in the educational setting who wish to improve their group and interpersonal skills.

GOAL(S) OR PURPOSE(S)

The general goal of PETC-I is to teach participants to train others in process skills and to facilitate the functioning of small groups. Part I, *Skills Trainer's Workshop*, involves preparing skills trainers to use exercises in part II, *Group Process Skills* (GPS) *Workshop*. Part II allows skills trainers to practice while they conduct a workshop for others in Group Process Skills. The PETC-I program has been designed to prepare these skills trainers to assist in a variety of situations to increase the effectiveness of a group's functioning.

PATTERNS OF USE

These materials are sequentially organized toward the cumulative attainment of the stated objectives. The training design includes extensive participant interaction for feedback, simulation trials, and interdependent action. For this reason, all participants are required to commit themselves to full attendance at all workshop sessions.

ASSESSMENT PROVISIONS

PETC-I objectives can best be met by having previously attained a high degree of competence with those skills taught in research utilizing problem solving and interpersonal communications. Because PETC-I prepares the individual for training others in Group Process Skills, previous training experience with these systems is also required.

Throughout the workshop, participants evaluate their learning by mutual feedback, self-testing (e.g., paper/pencil tests), and skill practice. In addition, a senior trainer is available for consultation.

TIME REQUIREMENTS

Total time required is 2 weeks for skills trainers. Participation in the Group Process Skills workshop requires 1 week.

IMPLEMENTATION PROCEDURES

The PETC-I senior trainer should complete all prerequisites for PETC-I including *Interpersonal Communications* (IPC) and *Research Utilizing Problem Solving* (RUPS) or have other comparable training experiences. During part II of the workshop, the senior trainer functions as a resource for the skills trainers.

Participants for PETC-I skills trainers are usually selected from those people who can be useful as trainers in their back-home settings. Prerequisites for attending PETC-I as a potential skills trainer include IPC and RUPS. Perhaps the most important prerequisite is that participants make a commitment to attend every session of the two-part workshop. PETC-I training is sequential and cumulative; much of it is also completed in team/trio arrangements.

Team assignments are made by the senior trainer according to several criteria. Some of these may include the preference of certain participants to work or not to work as a team, ease of location and planning times available, and apparent skill-level needs and intentions for future use.

An orientation kit for the host organizer of a PETC-I workshop has been prepared. This kit delineates the different responsibilities of the host and the senior trainer, gives a list of necessary materials and a partial list of supplies, and presents a sequential preparation checklist for the host to follow in arranging for a local PETC-I workshop. Two information fliers have also been developed to allow a potential participant in either part of PETC-I know what to expect to gain from participation and the obligations (both cognitive and affective) to the PETC-I program and teammates. A sample of each of these fliers is included in the orientation kit.

An ideal workshop size for a PETC-I senior trainer includes 12 skills trainers. It is possible to work with 15-18 participants; but due to the team/trio design of PETC-I, the total number should be a multiple of 3.

During the GPS workshop, the senior trainer serves as a resource to the skills trainers. The senior trainer is present to work with any of the teams as they experience the strategies and techniques through trying to train others in group-process skills.

Part I requires a spacious room with movable and comfortable furniture. It should be large enough to allow trio work to continue with a low-noise level, yet small enough that a senior trainer can observe each group's progress and problems. Tables for planning sessions are very helpful. The location should eliminate as many distractions, e.g., ringing phones and outside disruptions, as possible.

A similar room is needed during the GPS workshop for each team of skills trainers. In addition, a general meeting room is necessary for the senior trainer to hold conferences and to allow access to the GPS materials whenever a team decides upon the exercises to be used.

ASSURANCES AND CLAIMS

Assurances of Harmlessness

This system is still under development and testing. During preliminary trials and interim testing, users of this system have been repeatedly asked for feedback. There have been no reports to date of actual instances of physical, psychological, or sociological harm.

Assurances of Social Fairness

Social fairness issues have been considered in creating and revising these materials. They have been accepted as fair by users.

Assurances of Replicability

This system was created for use by persons experienced in the content of the system and in conducting experiential training designs. Trainer capability is an issue currently under study. Results will be reported by November 1975.

Claims of Effectiveness

Evaluation studies are being concluded and will be reported by November 1975.

Claims of Careful Product Development

This system is being developed over a 4-year period involving repeated rounds of trial and revision. Evaluation includes pilot trials, interim formative testing, and a field test.

PREPARING EDUCATIONAL TRAINING CONSULTANTS: CONSULTING (PETC-II)

The second part in a series of three instructional programs designed to introduce participants to comprehensive diagnostic and intervention models which facilitate instructional or organizational innovation

PETC-II is the second in a series of three cumulative and sequential instructional systems designed to help a cadre of educators acquire process training and consulting skills.

The PETC-II graduate should be capable of forming a temporary relationship with a small group or major subsystem of an educational organization to help make progress toward goals and/or to use these skills to improve that part of the organization over which the graduate has managerial responsibilities. Participants help by diagnosing the organization's problems and providing assistance that will temporarily add to or strengthen such functions as managing, planning, and producing. This allows the group to more adequately accomplish its immediate goals.

PETC-II materials consist of a set of trainee materials (a trainee manual), a set of instructional strategies (a trainer's manual), and a set of orientation papers which introduces the system and outlines procedures for installing or starting up a PETC-II workshop. The trainee materials include theory papers, diagnostic instruments, and instructions for executing learning activities. The instructional strategies consist of a set of the trainee materials interspersed with detailed directions for conducting the 11 PETC-II training sessions.

A PETC-II workshop is divided into three parts, the first consisting of three consecutive 10-hour days of instruction in basic concepts of consulting. A typical workshop includes 10 to 15 trainees and 2 trainers. Trainees are introduced to a variety of conceptual models and schemes related to planned change. These include models developed by Lewin (1951) and Lippitt (1958) and comprehensive diagnostic and intervention models developed especially for this instructional system. Part II is a 3-day practicum in which trainees engage in consulting projects with client systems prearranged by the workshop sponsor. Part III concludes the training with 3 days of debriefing, evaluation of the consulting practicum, and integrating learnings of the workshop.

The population of potential trainees includes educational personnel who occupy or seek roles with responsibility for staff training, organization or program development, or implementation of instructional or organizational innovations. These trainees are expected to come from private and public educational systems such as State departments of education, school districts, universities, and educational associations. It is expected that trainees will have become involved in the training through their own personal commitment, rather than as a result of imposed requirements.

Trainees are required to have completed several other instructional systems developed by the Northwest Regional Educational Laboratory (NWREL) or to possess equivalent experience. These systems include *Interpersonal Communications*, *Research Utilizing Problem Solving*, *Interpersonal Influence*, and *PETC-I: Skills Training*. It is assumed that these prerequisite workshops provide trainees with important knowledge and experience which form the foundation for PETC-II training. It is also assumed that training will be more productive when all trainees in a workshop have become familiar with the norms and values of the learning style employed by these systems.

The kinds of organizations that are expected to sponsor PETC training include private and public educational institutions such as universities, colleges, State departments of education, and school districts.

Potential client groups of PETC-II consultants generally include intact task groups of educators who are experiencing some kind of problem or difficulty that is keeping them from reaching their goals. However, it would be appropriate for a person with PETC-II skills training to consult with any part of an organization which desires help in improving its organizational health or effectiveness.

RD 140 023

SUBJECT AREA(S)

Preparing Educational Training Consultants: Consulting (PETC-II) focuses on consulting in a temporary relationship with a client system to add or strengthen a function as needed. Participants learn to apply differential diagnostic and intervention techniques.

INTENDED USERS AND BENEFICIARIES

Educational personnel with a high degree of expertise in process training benefit most.

GOAL(S) OR PURPOSE(S)

The purpose of this product is to prepare educational training consultants to apply differential diagnostic techniques and differential intervention strategies in temporarily helping a client system add or strengthen a function to realize a value or attain a goal and to diagnose competencies and derive an explicit rationale for assuming the consultant role.

PATTERNS OF USE

These materials are sequentially organized toward the cumulative attainment of the stated objectives. The training design includes extensive participant interaction for feedback, planning, and interdependent action. For this reason, all participants are required to commit themselves to full attendance at all workshop sessions.

ASSESSMENT PROVISIONS

PETC-II objectives can best be met by having previously attained a high degree of competence with those skills taught in the following systems: *Interpersonal Influence*, PETC-I, and associated systems. Because PETC-II prepares the individual for training others in group process skills, previous training experience with these systems is also required.

Throughout the workshop, participants evaluate their learning by mutual feedback, self-testing (e.g., paper-and-pencil tests), and skill practice. In addition, a senior trainer is available for consultation.

TIME REQUIREMENTS

This system requires 54 hours of training, 21 hours of individual study, and 9 hours of practical experience with the client. Nine days of concentrated time, or 3 weeks of three 3-day sessions, are required.

IMPLEMENTATION PROCEDURES

The trainer and installer of a PETC-II workshop may or may not be the same person. However, the trainer's manual includes a set of orientation papers which outlines procedures for installing or starting a PETC-II workshop.

ASSURANCES AND CLAIMS

This system is still under development and testing at the time of this writing. During preliminary trials and interim testing, users of this system have been asked repeatedly for feedback. There have been no reports to date of instances of, or serious concern about, physical, psychological, or sociological harm.

Social fairness issues have been considered in creation and revision of these materials. They have been accepted as generally fair by users.

This system was created for use by persons experienced in the content of the system and in conducting experiential training designs. Trainer capability is an issue currently under study. Results will be reported by November 1975.

Evaluation studies are currently being concluded and will be reported by November 1975.

This system is being developed over a 3-year period involving repeated rounds of trial and revision. Evaluation includes pilot trials, interim formative testing, and field testing.

RD 140 024

PREPARING EDUCATIONAL TRAINING CONSULTANTS: ORGANIZATIONAL DEVELOPMENT (PETC-III)

*An 8-month workshop and inservice training program
designed to develop individual skills in designing
and maintaining organization change*

Preparing Educational Training Consultants: Organizational Development (PETC-III) is the last in a sequence of seven instructional systems developed by the improving teaching competencies program (ITCP) of the Northwest Regional Educational Laboratory (NWREL) to provide organizational development skills for educational managers and consultants. It is also the third in a series of three PETC systems. PETC-III provides participants with the opportunity to acquire the knowledge, skills, and sensitivities that constitute a change process termed *"Organizational Development"* (OD). It provides training in helping an educational organization achieve structural and normative change to build in and maintain improved functional capabilities when desired and feasible and to develop functions which will enable it to change the kinds of objectives it sets for itself and utilize new kinds of resources in attaining its objective.

What is *Organizational Development* (OD)? OD is a strategy for organizational change. It is a set of practices that have evolved in industrial, governmental, and (more recently) educational settings. The purpose of OD is to improve organizational health and effectiveness. OD aims to help people increase their competencies so they can more effectively manage the human component of their organizations. The basic strategy of OD is to provide training and consultation that involve managers in identifying, diagnosing, and modifying the norms, structures, and processes of their organization. Through these normative, procedural, and structural changes, it is intended that the organization's effectiveness and health will be improved. OD is based on pieces of theory emanating from the models of "planned change" (Lippitt, Watson, and Westley, 1958; Havelock, 1970, 1972) and "action research" (Lewin, 1947; Coch and French, 1948; Lippitt and Jung, 1967). It also incorporates intervention strategies (tested by Seashore and Bowers, 1970; Schmuck and Runkel, et al., 1972).

Organizational development cases involve such things as: (1) Problems of communication (particularly upward), (2) intergroup conflict, (3) leadership issues, (4) questions of identity and destination, (5) questions about satisfaction and the ability of an organization to provide adequate and appropriate inducements, and (6) questions of organizational effectiveness. In other words, three categories of problems which are often addressed by OD are: (a) Problems of destiny-growth, identity, and revitalization; (b) problems of human satisfaction and development; and (c) problems of organizational effectiveness and organizational health.

PETC-III training is spread over a time period of 8 months. During this period, the PETC-III trainees complete a 1-day preworkshop assignment, attend 17 days of workshop meetings, and spend a minimum of 10 days conducting an organizational development project with a predetermined client group.

An organizational development project focuses on the organization (not individuals, committees, or groups of individuals) with a view toward building into and maintaining improved ways of functioning in the organization. The project is a series of interventions based on data collected and analyzed which aim at structural and normative changes to improve the functioning of the organization. A project may be conducted in one part of the organization or in the organization as a whole. An organizational development project becomes possible when the organization's needs and desires have the potential for providing new or increased areas of functional capability on a continued basis.

The system, in its present form, consists of a set of participant materials, strategies to be used with educational managers in a workshop setting, some preliminary plans for installing a PETC-III training program, and strategies to help those trained in PETC-III to use their skills in bringing about structural and normative changes in their schools and to provide organizational training and consultation for client groups.

SUBJECT AREA(S)

This system is designed to be the culmination of seven systems to train people to function as organizational developers.

INTENDED USERS AND BENEFICIARIES

This system will prepare educational managers and consultants to provide organizational development skills to the members of an agency or group.

GOAL(S) OR PURPOSE(S)

The PETC-III instructional system prepares participants to become educational training consultants. As a result of training, consultants are expected to be able: (1) to identify and explain the major organizational development, conceptualization, and intervention strategies that are presented in the PETC-III instructional system; (2) to meet with a potential client group and translate this group's difficulties into a specific problem or problems on which the group wishes to work; (3) to establish a definite and workable relationship and contract with a client group; (4) to collect information from the client group so that the group's problem(s) may be diagnosed and clarified; (5) to design, provide, and assess the effectiveness of intervention activities that allow the client group to explore and examine alternative norms, processes, and structures; (6) to design, provide, and assess the effectiveness of intervention activities that allow the client group to accomplish normative, procedural, or structural changes resulting in increased functional capability in the organization; and (7) to achieve a terminal relationship with the client group by gradual withdrawal and by establishing structures and procedures to substitute for the services provided by the consultant.

At another level, however, it is possible to predict observable changes in a client group that receives consultation. Specific examples follow:

1. Improved problem-solving capabilities—As a result of training in an organizational development, client groups may become more adept at problem solving. They may become more able to sense problem situations, differentiate between kinds of problems, and attend to problem situations with shared and explicit problem-solving procedures.

2. Improved management of interpersonal processes—As a result of training in organizational development, client groups may become more adept at combining people's efforts to achieve desired task goals. It is expected that vertical and horizontal communication may become more open, shared, and accurate; influence may become more shared and equalized; decisionmaking may become more diffused, characterized by explicit procedures and involvement of those who will be affected by, or who are responsible for, implementation of the decisions and coordination may become more explicit and accepted.

3. Improved procedures that support personal and professional growth—As a result of training in organizational development, client groups may become more adept at viewing personal and professional development as an ongoing function necessary to the growth of the group. Therefore, it is expected that the group may provide increased training opportunities for members to meet new organizational needs; increased learning resources so members can be continuous learners; and increased feedback, formally and informally, so members can move toward new ways of understanding.

4. Improve ways the organization attributes meaning—As a result of training in organizational development, client groups may become adept in the ways they see and explain themselves to the rest of the world. It is, therefore, expected that the group will have goals which are clear and in which members have a sense of ownership. The group will also respond appropriately to outside demands.

PATTERNS OF USE

These materials are sequentially organized toward the cumulative attainment of the stated objectives. The training design includes extensive participant interaction for feedback, simulation trials, and interdependent action. For this reason, all participants are required to commit themselves to full attendance at all workshop sessions as well as full preparation for them.

ASSESSMENT PROVISIONS

PETC-III objectives can best be met by having previously attained a high degree of competence with those skills taught in the following systems: *Social Conflict and Negotiative Problem Solving*, *Preparing Educational Consultants: Consulting* (PETC-II) and associated systems.

The PETC-III instructional system prepares participants training, consultants are expected to be able: (1) To

PROJECT MANAGEMENT EXECUTIVE ORIENTATION

A multimedia training product to introduce top-level school administrators to the concepts and techniques of project management

Project Management Executive Orientation is a multimedia training product for top-level school administrators which introduces them to the basic concepts and techniques of project management, the advantages and limitations of project management, the requirements and organization of a project-management system, and their role in supporting improvement projects in their schools.

The product is designed as an orientation, not as a skill-development package. Before a school district adopts a project management approach, it is important for top-level administrators to understand the advantages, limitations, and requirements presented by this product.

The product is divided into four sequenced lessons: The first lesson deals with the potential benefits accruing to local education agencies from applying project management concepts and techniques. The second lesson acquaints administrators with the alternative organizational arrangements appropriate for project management in a school setting. The third lesson covers the life cycle of a project and the kinds of support and assistance needed by the project director. The final lesson discusses where administrators can find additional information on project management and its application in a local school organization.

Instructional materials include a manual and four filmstrips with synchronized tape cassettes. The manual can be used alone, the filmstrip and tape cassettes can be used alone, or both may be used together.

SUBJECT AREA(S)

Planning and administration.

The product emphasizes the benefits of project management for a school district and the role of top-level administrators in supporting project activities. This is accomplished by covering such topics as: (1) Definition of a project and project management, (2) examples of the application of project-management procedures, (3) adapting project management to school operations, and (4) top-management support and coordination of projects.

INTENDED USERS AND BENEFICIARIES

Although the training product is intended primarily for top-level administrators, it can also be valuable to school board members and selected community members.

GOAL(S) OR PURPOSE(S)

The goal of the product is to orient top-level school administrators to the use of project-management procedures for improving the effectiveness of many school operations or activities including the implementation of improvement. The major objectives are: (1) To provide top-level administrators with basic knowledge of the project-management process, (2) to inform top-level administrators of the benefits of the project management approach for a local school district, (3) to acquaint top-level administrators with the kind of support and assistance that they and functional departments need to provide the project manager and the ongoing project operations, and (4) to inform top-level administrators where additional information and assistance regarding project management and its implementation in local education agencies may be found.

PATTERNS OF USE

The product is a self-contained unit and can be used individually or in a group workshop. Lessons should be studied in the order of their appearance. Although the product is self-contained, users may choose to obtain consultation or assistance from the developer. School districts have used the product with and without assistance.

ASSESSMENT PROVISIONS

Since the product is designed to serve as an orientation for top-level administrators, no provisions for assessment are needed or desired. During product development, assessment instruments were included in order to help provide information for product improvement. As a result of formative evaluation activities, the developer found that the inclusion of assessment instruments in the final product was not desirable.

TIME REQUIREMENTS

The time required to study the materials varies from 1 to 4 hours, depending on the study options selected.

IMPLEMENTATION PROCEDURES

The module is completely self-instructional and requires no external assistance for use. Users may choose to view the audiovisual materials in 1 hour in an individual or group mode. They may choose to read the manual individually or hold a group workshop for a morning in which they view the audiovisual material and discuss questions raised in the manual regarding the implications and adaption of the ideas presented.

Summary Cost Information

If, for example, a district wanted to orient five of its top-level administrators to project management, they might choose to hold a workshop using the filmstrips and accompanying tapes. Their cost would be $20 for the audiovisual materials and $25 for the manuals (one for each participant) for a total of $45.

Personnel Required for Product Adoption and Implementation

The product can be used by a school superintendent or group of top-level administrators without any previous training in project management. Districts can choose, however, to obtain consultation or assistance from the developer for the orientation or followup activities. Costs for different services can be obtained from the developer.

ASSURANCES AND CLAIMS

Assurances

The subject of the product is suggested rational management procedures for consideration by top-level administration. This emphasis minimizes the chance of harm resulting from use. The developer has not received any reports of harm associated with the use of the product.

Steps have been taken to assure that the product excludes social bias. During the pilot and field testing of the product, school district personnel brought incidences of bias to the attention of the developers. As a result, changes were made to both the audiovisual and written materials.

The product has been used by school districts of various sizes in different regions of the United States with comparable results in terms of users understanding the concept of project management, its benefits for school districts, and their role in supporting project efforts. Some used the product without the assistance of the developer. They achieved the same positive results.

Claims

The product orients top-level school administrators to the project-management process, the benefits of project management for a local school district, and the various support activities that top-level admininstrators ought to perform in order to help assure project success. This claim is supported by a summative evaluation conducted during 1973 involving several school districts.

Particular attention has been given to the quality of the product's content and instructional process. Product development involved the steps of analysis, conceptualization, design, construction of prototype, pilot testing and revision, field testing and revision, and summative evaluation. The steps of analysis, conceptualization, and design involved a task analysis of project management in schools, a review of literature on project management and instructional systems design, and consultation with experts in project-management and instructional-systems design. The construction of the prototype involved the developer and an external project-management expert in the writing of lesson material. The pilot testing, field testing, summative evaluation, and revisions of the product involved top-level administrators from districts in several States and many other knowledgeable educators. This developmental process has been carefully documented.

INFORMATION CURRENT AS OF FEBRUARY 1975 ■

RD 140 026

PROPOSAL DEVELOPMENT

An individualized package to train school administrators and teachers in the techniques of obtaining approval and financial support for educational activities

Proposal Development is a training product that instructs school administrators and teachers in the techniques and skills of managing the development of proposals for educational projects. It helps school personnel to plan specific school improvements and to present those plans to decisionmakers for approval and support. The decisionmaker might be a school board or an external funding agency. The emphasis is on proposals to undertake specific educational activities rather than proposals to perform academic research.

The training product covers the topics of planning the development of a proposal; preparing to conduct the proposal development effort; creating the proposal document; and submitting, amending, and negotiating the proposal.

The product consists of nine individually bound lesson booklets and a user's manual, all packaged in a single, book-size box that permits easy handling and storage. The lesson booklets include user management instructions, instructional objectives, text, examples, exercises, reading references, and self-assessment instruments. The materials can be used in an individual or a group setting.

SUBJECT AREA(S)

Planning and administration.

The product emphasizes the development of user knowledge and skills required to effectively manage the development of a proposal for an educational activity. These skills allow the user to perform such tasks as: (1) Developing the plan for proposal development including work breakdown structure, work flow diagram, time estimates, and a budget; (2) preparing for the startup of the proposal development effort; (3) conducting the proposal development effort including the creation of a detailed proposal document; and (4) submitting, amending, and negotiating the proposal.

INTENDED USERS AND BENEFICIARIES

The training product is intended primarily for use by any person in a school district given the responsibility of preparing a proposal document. It is also helpful to others participating in a proposal development effort.

Potential users of the product include school administrators, teachers, graduate educators, community agency personnel interacting with schools, and agencies having liaison with local schools (e.g., State departments of education).

GOAL(S) OR PURPOSE(S)

The goal of the product is to help school districts develop detailed, effective proposals/plans for their new educational activities. This is accomplished by providing users with the knowledge and skills necessary to plan, prepare, operate, and terminate a proposal development effort/project.

PATTERNS OF USE

The material is self-contained and requires no specially trained individual for use. Lessons cover the lifespan of a proposal development project and usually are studied sequentially. The material is flexible and can, for example, be adapted to emphasize proposal management skills or proposal writing and preparation skills. Consequently, users may choose to obtain consultation or assistance from the developer.

ASSESSMENT PROVISIONS

The product includes pretests for assessing entry-level skills and posttests for user self-assessment of performance.

TIME REQUIREMENTS

The product takes 10 to 12 hours to complete. This time may be spread out over the duration of the proposal development project.

IMPLEMENTATION PROCEDURES

No specially trained individuals are required for a district to use the product. It is recommended, however, that one person coordinate the training of other staff members. Each user should have a copy of the product in order to facilitate initial training and later reference during the proposal development effort.

Summary Cost Information

If, for example, a district chose to train one proposal development project director and five other staff members helping in the development of the proposals, then six sets of materials would be needed for a total cost of $150.

Personnel Required for Product Adoption and Implementation

The product can be used by an individual or group of district staff without previous training in proposal development. Districts may choose, however, to obtain consultation or assistance from the developer for initial staff training or adaptation of the materials to special needs. Costs for different services can be obtained from the developer.

ASSURANCES AND CLAIMS

The subject of the product is rational management and planning procedures for use by school district administrators and teachers. This emphasis minimizes the chance of harm resulting from use. The developer has not received any reports of harm associated with the use of the product.

The nature of the content of the product tends to minimize the chance of social bias. Although the developer has strived for social fairness in writing the material, no formal analysis of wording or examples has been conducted.

The product has been used by personnel from large- and medium-size urban school districts and smaller suburban districts in different regions of the United States with comparable results in terms of user performance.

RURAL FUTURES DEVELOPMENT STRATEGY DESCRIPTIONS

Four types of descriptions of strategy to help people in rural communities regain self-determination and local control

Rural Futures Development Strategy Descriptions forms one part of a comprehensive approach to the improvement of rural education. The descriptions are tools to help people understand and effectively communicate about the RFD Strategy.

The four types of RFD Strategy Descriptions focus on different aspects of the model itself, as follows:

(1) Diagrams—Overview diagrams and matrices show the relationships among Rural Futures Development (RFD) participants, problem-solving phases, products, and facilitating activities.

(2) Brochure—The brochure contains information about the model and its key elements, likely outcomes, participant roles, RFD products, and technical assistance capabilities of the Northwest Regional Educational Laboratory (NWREL).

(3) Flip charts and transparencies—These visual aids describe the model sequentially from its funding, development, and installation to its outcomes.

(4) Technical paper series—Each paper addresses one important feature of the RFD Strategy, its theoretical base and data supporting its reliability and validity.

Three problem areas, evidenced in the literature of rural sociology, are addressed by the model:

(1) Rural communities have lost the structures and processes that used to make them centers of self-determination and local control. They have been penetrated by agencies whose policies and operating procedures are determined outside the local community. To reverse this trend, people in rural communities need to develop their skills in inquiry, problem solving, and effective collaboration.

(2) One reason rural schools are less responsive and less adaptive to change is that teachers and administrators often are alienated from community life; they also have few opportunities for professional growth. School boards rarely have access to multiple strata of opinion within the community and school. There is a need to form close working relationships among educators, students, and citizens.

(3) The services which support agencies provide to rural schools tend to be inadequate and overly prescriptive. Teacher training institutions have not considered special rural needs and circumstances in designing programs. Assistance needs to be provided to these agencies to help them better meet rural needs.

The RFD Strategy has five key elements which are firmly based in the research and theories of change, organizational development, and learning. These elements are: (1) An external change agent, (2) a collaborative problem-solving process, (3) self-directed learning based on self-perceived needs, (4) the institutionalization of educational innovation, and (5) the self-renewal of educational organizations.

SUBJECT AREA(S)

Rural education improvement

INTENDED USERS AND BENEFICIARIES

(1) Diagrams serve as: Reference aids for RFD developers, consultants, installers, and participants to employ when developing products and materials for use with the RFD Strategy; reference materials and visual aids for RFD developers, consultants, installers, and participants to use when developing oral or written presentations that explain the RFD Strategy; training aids for process facilitators and the trainers of process facilitators; and descriptive materials that can be distributed to a general audience interested in finding out about the RFD Strategy.

(2) The brochure is intended to create interest in, and encourage further investigation of, the RFD Strategy when used by RFD developers, consultants, installers, trainers of process facilitators, School-Community Group (SCG) members, RFD participants, and others interested in the RFD Strategy.

(3) Flip charts and transparencies are intended to present progressive, unfolding description of the RFD Strategy that complements oral presentations and are

intended for use by: RFD consultants; installers; trainers of process facilitators; process facilitators; State, regional, and local education agency personnel; and others interested in or participating in the RFD Strategy.

(4) The technical paper series is intended for professional audiences such as educators, funding agencies, and researchers who need academically acceptable descriptions of the RFD Strategy, its theoretical foundations, and its impact.

GOAL(S) OR PURPOSE(S)

The two purposes of the product are: (1) To provide basic descriptions of, and information about, the RFD Strategy in forms suitable for use with a variety of audiences and in a variety of situations and (2) to serve as guidelines for educational agencies as they develop materials describing the RFD Strategy and explaining the treatment that other RFD products and procedures are meant to support.

PATTERNS OF USE

Two product pieces, the flip charts and diagrams, are designed to complement a verbal presentation. The brochure and technical papers are self-explanatory and have no prescribed pattern of use.

ASSESSMENT PROVISIONS

There is no formal evaluation of audiences who use this product, although formative data intended to improve the product are collected. The effectiveness of the product is measured in terms of the number and kinds of formal agreements between various audiences resulting from the product's use, as well as the public support that is generated for these agreements.

TIME REQUIREMENTS

Time completion varies with the audience, the product piece, and the context of use; for example, the brochure can be read thoroughly by the average reader in 5-10 minutes, while scholarly analysis of one technical paper might require several days.

IMPLEMENTATION PROCEDURES

No special equipment, services, or organizational changes are required for most product uses. Persons from State or regional education agencies who use the product have received consultation or training from the product developer in order to acquire a thorough knowledge of the model.

ASSURANCES AND CLAIMS

This product has been used (in its current and earlier forms) with a wide variety of audiences, lay and professional, in large- and small-group activities. No evidence of harm has been observed or indicated by users.

The product is consciously designed to be free of racial, ethnic, socioeconomic, or sexual stereotyping. In addition, the product will be subjected to rigorous internal quality assurance procedures and to expert and user review through which any questionable portion of the product can be identified and corrected.

INFORMATION CURRENT AS OF MARCH 1975 ■

RURAL FUTURES DEVELOPMENT GUIDE FOR SUPPORT AGENCIES

RD 140 028

A guide for regional or State educational staff providing support for educational change in a rural setting

The *Rural Futures Development (RFD) Guide for Support Agencies* provides basic information, guidelines, and resources for staff persons whose agencies at the State or regional level support educational problem solving in rural communities as part of the RFD Strategy. (See RFD Strategy Descriptions catalog entry for a more detailed explanation of this problem-solving model.) Although these agencies are usually planned to be the State and regional educational agencies, other related organizations such as community colleges or universities might be designated as the support agencies.

The primary purpose of the product is to guide the work of support agency staff related to RFD in: fostering and maintaining collaborative relationships between local, regional, and State educational agencies; providing training to the external change agents who are based in regional agencies and who facilitate local problem solving (see also the catalog entry for the RFD *Guide for Training School-Community PF's*); providing consultative services in a responsive rather than directive manner to participating groups in the RFD Strategy—the local school-community problem-solving group, school boards, school staffs, and school administrators; and building a data-collection system on which decisions to expand the use of the RFD model throughout a region or the entire State can be based.

The product, therefore, contains a model for consultation that will facilitate multilevel collaboration, the theory and rationale which supports this model, sample activities, and a set of procedures and resources for adapting this model to a variety of audiences and sites.

SUBJECT AREA(S)

How to support and plan for the expansion of collaborative problem solving in local schools and communities is the subject of the *RFD Guide for Support Agencies*. The guide consists of:

RFD Strategy values, assumptions, goals, and features.

A discussion of the leadership and support roles of agencies involved in RFD.

A problem-solving approach to the development of individual and organizational capabilities related to RFD.

INTENDED USERS AND BENEFICIARIES

The primary users of the product are support agency staff, at both the State and regional levels, who coordinate and manage the implementation of RFD, provide services in response to local requests, and plan for the expansion of RFD throughout the region and State.

Ultimate beneficiaries of the product are the groups of people in rural communities with whom process facilitators (PF's) work to solve educational problems, communities at large which strengthen their local problem-solving capabilities, and rural students who find increased educational opportunities available as a result of these local capabilities.

GOAL(S) OR PURPOSE(S)

The goals of the support agency guide are: (1) to provide a method of examining and deciding on agency functions in supporting the local problem-solving process; (2) to provide help in developing the means, whether tools or skills, to fulfill these functions; (3) to provide guidelines for carrying out these functions; and (4) to provide assistance in adapting the RFD problem-solving approach to other school and community concerns.

PATTERNS OF USE

Support agency staff are introduced to the use of the product by NWREL consultants. The staff uses the guide as both a handbook and a resource, with assistance from NWREL consultants that decreases as individual and organizational capabilities related to RFD increase.

Both format and content of the product are flexible and are intended to be influenced by specific situations encountered by staff. Content is focused on supporting and adapting the local problem-solving process. The product is generally self-directive and self-pacing, except that its use coincides at several points with local events.

ASSESSMENT PROVISIONS

The support agency guide is not tested, except in an exploratory fashion, apart from the context of the RFD Strategy. Learning of State and regional educational agency staffs, based on the assistance given by NWREL consultants and use of the RFD support agency guide, is to be assessed as part of evaluating the total RFD Strategy in the second of two consecutive sites. Evaluation of the first installation, now underway in Utah, is concerned with providing formative data for the further definition and refinement of the Strategy; the product is not ready to be included as part of this first installation. Evaluation of the second installation will ascertain the degree to which two kinds of objectives are achieved: Process objectives are concerned with the degree to which the strategy is the implemented; and outcome objectives deal with the extent to which desired effects are achieved, enroute, and at the conclusion of the problem-solving cycle.

A series of instruments is being developed to measure the accomplishment of objectives related to both the State and regional educational agencies and their roles. All instrumentation, data collection, analysis of data, and presentation of results are the responsibility of the Research and Evaluation Unit, Rural Education Program.

TIME REQUIREMENTS

Although support agency activities are closely tied to local problem solving activities, in most cases they begin before, and extent beyond local events. Preceding local activities, support agency activities include: Becoming aware of the RFD model, making a joint local-regional-State decision to utilize the model, negotiating contracts with NWREL for its consultation services between the school district and the regional agency for PF team services, forming task forces at the State and regional levels, and beginning to examine task force functions and to plan their roles.

The time required to complete one problem-solving cycle in a local community ranges from one to two school years, depending on the scope of the addressed problem and on the tradeoffs each community makes in terms of thoroughness, investment of time and resources, and similar factors.

At the end of this time period, the support agencies prepare a summative evaluation of the use of the RFD model, decide whether to expand use of the model and carry out the expansion effort.

IMPLEMENTATION PROCEDURES

Use of the product by support agency staff is introduced by NWREL consultants and is most effective in concert with continued consultative services. No special equipment or facilities are required.

The product consists of one notebook and a container of resources. These are infinitely expandable by support agency staff and can be tailored to individual needs and workstyles.

Personnel Required for Product Adoption and Implementation

No personnel in addition to those from support agencies who implement the RFD Strategy at the local, regional, and State level, are required. Major strategy implementation roles at the various levels are: Local—process facilitator (PF) team; regional—RFD coordinator and RFD task force; and State - RFD coordinator, RFD task force, and RFD specialists (training of PF's and liaison with regional agency).

PF's are anticipated to be the only staff members who may be recruited from outside the regional support agency if existing staff members are not identified for that role. Other roles are expected to be designated to existing personnel. Also, the PF's may work full time with the problem-solving process, whereas other roles are expected to be less than full time.

ASSURANCES AND CLAIMS

Portions of this product have been used in earlier forms with a wide variety of audiences. No evidence of harm has been observed or indicated by users. Formative data have been gathered consistently from these users to improve the usefulness of the product pieces.

The product will be consciously designed, based on developer values, to be free of racial, ethnic, socioeconomic or sexual stereotyping, and of patronizing or demeaning attitudes. In addition, the product will be subjected to rigorous internal quality assurance procedures and to expert and user reviews through which any questionable portion of the product can be identified and corrected.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

RURAL FUTURES DEVELOPMENT GUIDE FOR SCHOOL BOARDS

A handbook for school-board-member participation in educational problem solving in a rural community

The *Rural Futures Development Guide for School Boards* is a handbook for school board members who participate in educational problem solving in rural communities as part of the Rural Futures Development (RFD) Strategy. (See RFD Strategy Descriptions catalog entry for a more detailed explanation of this problem-solving model.)

The primary purpose of the guide for school boards is to aid the work of the school board in the problem-solving process. This work has three aspects: (1) The participation of the school board in community-school problem solving as the legitimate local authority to contract for process facilitator services, and to officially adopt new educational policy and practice; (2) the leadership of the school board in encouraging and supporting the work of the community members, educators, and students on the school-community group (SCG), a "third party" problem-solving body; and (3) the development over time of the school board's own problem-solving capabilities related to its professional concerns.

The product, therefore, contains basic information, guidelines, and resources related to each of these aspects.

SUBJECT AREA(S)

Problem solving from the perspective of the school board for educational improvement, and for personal and professional development is the subject area.

The major topics covered by the guide are: (1) RFD Strategy values, assumptions, goals, and features; (2) the role of the school board in using the problem-solving model and the relationships between the various groups of people involved; (3) guidelines for participation, including group task (receiving and acting on reports from the school-community group, or arranging resources for improvement projects; and group debriefing and planning) and group interaction (interpersonal communication, conflict resolution, and decisionmaking); and (4) leadership and management while engaged in problem solving.

INTENDED USERS AND BENEFICIARIES

The primary users of this product are school board members who are legally responsible for the education of children in their district. In addition, school administrators, such as the superintendent or others who have a direct relationship to the school board, may also find the product of interest and use.

Ultimately the entire community and the school will benefit from the product's use because increased educational opportunities follow the strengthening of local problem-solving capabilities. This in turn results from a collaborative problem-solving experience.

GOAL(S) OR PURPOSE(S)

The school board guide is intended to provide board members with: (1) Indepth information about the RFD Strategy; (2) guidelines for participating in every phase of the problem-solving process; (3) a description of the kinds of activities the school board can expect to be involved in; (4) guidelines for encouraging and supporting the participation of the SCG and the school staff in problem-solving activities; and (5) a series of resources, along with some suggestions for developing a storage and retrieval system for them.

PATTERNS OF USE

School board members are introduced to the use of the product by the team of external change agents, namely process facilitators (PF's), who facilitate educational problem solving as part of the RFD Strategy. The school board uses the guide both as a handbook and a resource, with consultation from the PF team as requested.

Both format and content of the product are flexible. Content is focused entirely on the process of problem solving as applied to specific concerns encountered in the school and community. The product is generally self-directive, and either self-pacing or paced by the progress of the SCG and school staff.

ASSESSMENT PROVISIONS

The *Rural Futures Development Guide for School Boards* is not tested, except in an exploratory fashion, apart from the context of the RFD strategy. School board development, based on the consultation advice of the PF's and the use of the product, will be assessed as part of evaluating the total RFD Strategy in two consecutive sites. Evaluation of the first installation, now underway in Utah, is concerned with providing formative data for the further definition and refinement of the strategy. Evaluation of the second installation will ascertain the degree to which two kinds of objectives are achieved. Process objectives are concerned with the degree to which the strategy is implemented and outcome objectives deal with the extent to which desired effects are achieved en route and at the conclusion of the problem-solving cycle.

A series of instruments is being developed to measure the accomplishment of objectives relating to the school

RD 140 029

board and its role. These instruments will include logs, observation schedules, interview schedules, questionnaires, rating scales, checklists, knowledge tests, work sample reviews, and record reviews. All instrumentation, data collection, analysis of data, and presentation of results are the responsibility of the research and evaluation unit, rural education program.

TIME REQUIREMENTS

The time required to complete one problem-solving cycle in a local community ranges from 1 to 2 school years, depending on the scope of the addressed problem and on the tradeoffs each community makes in thoroughness, investment of time and resources, and similar factors. Therefore, one cycle of use of the product by the school board also takes from 1 to 2 school years.

IMPLEMENTATION PROCEDURES

A PF team from a regional education agency or other support agency is required to consult with the school board throughout the first cycle of problem solving as needed. Thereafter, the PF team can be utilized as an occasional consultant. No special equipment or facilities are required.

The product has two parts: A looseleaf notebook and a file box containing resources. Both parts are infinitely expandable by the school board and can be tailored to individual and group needs over time.

Personnel Required for Product Adoption and Implementation

Use of the product assumes that a PF team is available for consultation with the school board. All roles are assumed by local residents in addition to their normal activities.

ASSURANCES AND CLAIMS

A few materials in this product have been used in earlier forms by hundreds of community and school groups, with no evidence of harm observed or indicated. A few additional materials have been validated by a user panel. Formative data have been gathered consistently from these users to improve the usefulness of the materials. The remaining pieces of the product have not as yet been tested.

The product is consciously designed, based on developer values, to be free of racial, ethnic, socioeconomic, or sexual stereotyping and patronizing or demeaning attitudes. In addition, the product will be subjected to rigorous internal quality assurance procedures and to expert and user review by which any questionable portion of the product can be identified and corrected.

RURAL FUTURES DEVELOPMENT GUIDE FOR SCHOOLS

A handbook for community groups participating in planning and implementing educational improvements in a rural community

The *Rural Futures Development Guide for Schools* is a handbook for school staff members who participate in educational problem solving in rural communities, as part of the Rural Futures Development (RFD) Strategy. (See RFD Strategy Descriptions catalog entry for a more detailed explanation of this problem-solving model.)

The primary purpose of the guide for schools is to support the work of the school staff in the problem-solving process. This work has four aspects: (1) The participation of school staff members in the school-community group, (SCG), a "third party" problem-solving group comprised also of community opinion leaders, students, and, on occasion, school board members; (2) the provision of valuable data about the art and science of education to which school staff members have access based on their experience and learning, (3) the leadership of school administrators who encourage and support the work of the SCG and others on the school staff; and (4) the advance preparation that school staff members must do in order to absorb constructively the impact of various educational improvements.

The product contains basic information, guidelines, and resources related to each of these aspects.

SUBJECT AREA(S)

The subject area is problem solving from the perspective of the school staff for the improvement of education and for personal and professional development.

Major topics of the product include: (1) RFD Strategy values, assumptions, goals, and features; (2) the role of the school in using the problem-solving model and the relationships between various groups of people involved; (3) guidelines for participation, including group task (analysis of alternatives along the dimensions of organizational development, curriculum development, and staff development, and group debriefing and planning) and group interaction (interpersonal communication, conflict resolution, and decisionmaking); and (4) leadership management while engaged in problem solving.

INTENDED USERS AND BENEFICIARIES

The primary users of this product are professional members of the school staff who are legally and/or traditionally responsible for decisionmaking in the schools with respect to programs, facilities, resources, organizational structure, and other activities. In addition, school support staff such as clerks, custodians, and students will use the guide as they participate in the RFD Strategy.

Ultimately the entire community and school will benefit from the product's use because increased educational opportunities follow the strengthening of local problem-solving capabilities. This in turn results from a collaborative problem-solving experience.

GOAL(S) OR PURPOSE(S)

The school guide is intended to provide school staff members with: (1) Indepth information about the RFD Strategy, (2) guidelines for participating in every phase of the problem-solving process, (3) a description of the kinds of activities in which the school staff can expect to be involved, and (4) a series of resources, along with some suggestions for developing a storage and retrieval system for them.

PATTERNS OF USE

School staff members are introduced to the use of the product by a team of external change agents, namely process facilitators (PF's), who facilitate educational problem solving as part of the RFD Strategy. The staff uses the guide both as a handbook and resource, with support from the PF team. The PF team support is designed to decrease over time as staff confidence and skill increase.

Both format and content of the product are flexible. Content is focused entirely on the process of problem solving as applied to specific concerns encountered in the school and community. The product is generally self-directive, and either self-pacing or paced by the progress of other problem-solving groups.

ASSESSMENT PROVISIONS

The *Rural Futures Development Guide for Schools* has not been tested, except in an exploratory fashion, apart from the context of the RFD Strategy. The learning of school staff members, based on consultation advice given by PF's and the use of the product, is to be assessed as part of evaluating the total RFD Strategy in two consecutive sites. Evaluation of the first installation, now underway in Utah, is concerned with providing formative data for the further definition and refinement of the strategy. Evaluation of the second installation will ascertain the degree to which two kinds of objectives are achieved: process objectives are concerned with the degree to which the strategy is implemented and outcome objectives deal with the extent to which desired effects are achieved en route and at the conclusion of the problem-solving cycle.

A series of instruments is being developed to measure the accomplishment of objectives relating to school staff members and their role. These instruments will include logs, observation schedules, interview schedules, questionnaires, rating scales, checklists, knowledge tests, work sample reviews, and record reviews. All instrumentation, data collection, analysis of data, and presentation of results are the responsibility of the research and evaluation unit, rural education program.

TIME REQUIREMENTS

The time required to complete one problem-solving cycle in a local community ranges from 1 to 2 school years, depending on the scope of the addressed problem and on the tradeoffs each community makes in thoroughness, investment of time and resources, and similar factors. Therefore, one cycle of use of the product by the school staff also takes from 1 to 2 school years.

IMPLEMENTATION PROCEDURES

A PF team from a regional education agency or other support agency is required to assist the school staff through the first cycle of problem solving. Thereafter, the PF team can be utilized as an occasional consultant. No special equipment or facilities are required.

The product has two parts: A looseleaf notebook and a file box containing resources. Both parts are infinitely expandable by the school staff and can be tailored to individual and group needs over time.

Personnel Required for Product Adoption and Implementation

Use of the product assumes that a PF team is available for consultation with the school staff and school administrators, and that release time for school staff and students can be arranged for meetings, workshops, or other problem-solving activities.

All roles are designated for existing personnel.

ASSURANCES AND CLAIMS

Materials in this product have been used in earlier forms by hundreds of community and school groups, with no evidence of harm observed or indicated. Formative data have been gathered consistently from these users in order to improve the usefulness of the materials.

The product is consciously designed, based on developer values, to be free of racial, ethnic, socioeconomic, or sexual stereotyping, and patronizing or demeaning attitudes. In addition, the guide will be subjected to rigorous internal quality assurance procedures and to expert and user review by which any questionable portion of the product can be identified and corrected.

RURAL FUTURES DEVELOPMENT NOTEBOOK FOR SCHOOL-COMMUNITY GROUPS

A handbook for those who work in educational problem solving in rural communitites

The *Rural Futures Development Notebook for School-Community Groups* is a handbook for school-community groups, representative groups of community opinion leaders, educators, and students who collaborate in educational problem solving in rural communities as part of the Rural Futures Development (RFD) Strategy. (See RFD Strategy Descriptions catalog entry for a more detailed explanation of this problem-solving model.)

The primary purpose of the RFD notebook is to support the work of the school-community group (SCG) in planning and carrying out educational improvements within their school system. The RFD problem-solving process is cyclical, but can be viewed as having seven phases:

(1) Awareness—Schools and communities learn about RFD and decide whether they are ready to undertake collaborative problem solving and whether RFD is appropriate to their needs.

(2) Getting started—A temporary SCG is formed to investigate which opinion groups in the community and school ought to be represented on the permanent SCG and which opinion leaders should represent those groups.

(3) Focusing on the problem—The permanent SCG is established. It conducts a community and schoolwide survey to identify educational needs, orders the needs, and selects one or more for the first cycle of problem solving. The SCG then prepares goal and barrier statements for each selected problem.

(4) Searching for alternatives—The SCG is concerned now with gathering information about alternative solutions to perceived needs, identifying local and outside resources and preparing reports which describe choices, predicted consequences of each choice, and a preferred solution.

(5) Planning for action—The SCG prepares detailed implementation and evaluation plans for each improvement project; this involves further analysis of the consequences of the solution and detailed plans for attending to curriculum, organizational, and staff competency requirements attendant to the solution. Resources are planned in consultation with the school board; activities are planned with the school staff.

(6) Carrying out the plans—The SCG and school staff work together to introduce the improvement, monitor its progress, modify plans to meet changing realities, and so forth; progress reports are provided to the school board and the community at large.

(7) Assessing the results—The SCG evaluates the results of the educational improvement, as well as the results of using RFD, and reports to the community and the school board. The SCG also recommends whether to use RFD in another problem-solving cycle, which problems to address next, and any changes in SCG membership that seem appropriate.

The product contains basic information, guidelines, and resources for the SCG, related to each of these phases.

SUBJECT AREA(S)

The subject area is problem solving from the perspective of the SCG for educational improvement in collaboration with students and educators and for personal and professional development.

Major topics of the product include: (1) RFD Strategy values, assumptions, goals, and features; (2) the role of the SCG in using the problem-solving model and the relationships among various groups of people involved; (3) guidelines for participation, including group task (conducting a needs assessment, examining alternatives, using resources and assessing results; and group debriefing and planning) and group interaction (interpersonal communication, conflict resolution, and decisionmaking); and (4) leadership and management while engaged in problem solving.

INTENDED USERS AND BENEFICIARIES

The primary users of this product are the SCG chairperson, the SCG working in toto or in smaller task force teams, and individual SCG members.

RD 140 031

Ultimately the entire community and school benefit from the product's use because increased educational opportunities follow the strengthening of local problem-solving capabilities. This in turn results from a collaborative problem-solving experience.

GOAL(S) OR PURPOSE(S)

The RFD notebook is intended to provide SCG members with: (1) Indepth information about the RFD Strategy, (2) guidelines for participating in every phase of the problem-solving process, (3) a description of the kinds of activities in which the school staff can expect to be involved, and (4) a series of resources along with some suggestions for developing a storage and retrieval system for them.

PATTERNS OF USE

SCG members are introduced to the use of the product by the team of external change agents, namely process facilitators (PF's), who facilitate educational problem solving as part of the RFD Strategy. The SCG uses the guide, both as a handbook and resource, with support from the PF team that decreases over time—as the confidence and skill of SCG members increase.

Both format and content of the product are flexible. Content is focused entirely on the process of problem solving as applied to specific concerns encountered in the school and community. The product is generally self-directive and self-pacing.

ASSESSMENT PROVISIONS

The RFD notebook is not tested, except in an exploratory fashion, apart from the context of the RFD strategy. The learning of SCG members, based on the consultation advice by PF's and the use of the product, is to be assessed as part of evaluating the total RFD Strategy in two consecutive sites. Evaluation of the first installation, now underway in Utah, is concerned with providing formative data for the further definition and refinement of the strategy. Evaluation of the second installation will ascertain the degree to which two kinds of objectives are achieved. Process objectives are concerned with the degree to which the strategy is implemented and outcome objectives deal with the extent to which desired effects are achieved en route and at the conclusion of the problem-solving cycle.

A series of instruments is being developed to measure the accomplishment of objectives related to SCG members and their role. These instruments will include logs, observation schedules, interview schedules, questionnaires, rating scales, checklists, knowledge tests, work sample reviews, and record reviews. All instrumentation, data collection, analyses of data, and presentation of results are the responsibility of the research and evaluation unit, rural education program.

TIME REQUIREMENTS

The time required to complete one problem-solving cycle in a local community ranges from 1 to 2 school years, depending on the scope of the addressed problem and on the tradeoffs each community makes in terms of thoroughness, investment of time and resources, and similar factors. Therefore, one cycle of use of the product by the SCG also takes from 1 to 2 school years.

IMPLEMENTATION PROCEDURES

A PF team from a regional education agency or other support agency is required to assist the SCG through the first cycle of problem solving. Thereafter, the PF team can be utilized as an occasional consultant. No special equipment or facilities are required.

The product has two parts: A looseleaf notebook and a file box containing resources. Both parts are infinitely expandable by the SCG and can be tailored to group needs over time.

Personnel Required for Product Adoption and Implementation

Use of the product assumes that a PF team is available for consultation with the SCG and that release time for school staff and students can be arranged for meetings, workshops, or other problem-solving activities of the SCG, as required.

All roles are assumed by local residents in addition to their normal activities.

ASSURANCES AND CLAIMS

Materials in this product have been used in earlier forms by hundreds of community and school groups, with no evidence of harm observed or indicated. Formative data have been gathered consistently from these consumers to improve the usefulness of the materials.

The product is consciously designed, based on developer values, to be free of racial, ethnic, socioeconomic, or sexual stereotyping, and patronizing or demeaning attitudes. In addition, the product will be subjected to rigorous internal quality assurance procedures and to expert and user review through which any questionable portion of the product can be identified and corrected.

RURAL FUTURES DEVELOPMENT GUIDE FOR TRAINING SCHOOL-COMMUNITY PROCESS FACILITATORS

A guide for the trainers of external change agents who are to facilitate educational improvement in a rural community

The *Rural Futures Development Guide for Training* provides information, guidelines, and sample training activities for trainers of the external change agents (process facilitators or PF's) who facilitate educational problem solving in rural communities as part of the Rural Futures Development (RFD) Strategy. (See RFD Strategy Descriptions catalog entry for a more detailed explanation of this problem-solving model.)

The primary purpose of the product is to aid trainers, called RFD specialists, in developing a series of formal training sessions interspersed with guided field experiences (field apprenticeship) that will prepare and assist teams of PF's in carrying out the problem-solving process. PF's work with three major groups in each community: (1) The school-community group (SCG), a "third party" problem-solving group composed of community opinion leaders, school staff members, students, and on occasion, school board members; (2) the school staff, who provide valuable technical data to the SCG at each step in the problem-solving process and who also prepare for the impact of various problem solutions; and (3) the school board and school leaders who encourage and support the work of the SCG and the school staff in part by increasing their own problem-solving capabilities over time.

The RFD Training Guide is designed to be used in close association with the *RFD Manual for School-Community Process Facilitators* (see this catalog entry also).

SUBJECT AREA(S)

Planning of process consultation for persons engaged in collaborative problem solving is the subject area.

INTENDED USERS AND BENEFICIARIES

The primary users of the product are the RFD specialists. Both RFD specialists and PF's use training activities in preparation for field experiences. Ultimate beneficiaries of the product are the groups of people in rural communities with whom PF's work to solve educational problems, communities at large which strengthen their local problem-solving capabilities, and rural students who find increased educational opportunities available as a result of these local capabilities.

GOAL(S) OR PURPOSE(S)

The two goals of the training guide are to provide flexible and responsive training for PF's and to prepare PF's to carry out the events of the RFD problem-solving process with SCG's, school staffs, administrators, and school boards.

PATTERNS OF USE

RFD specialists and PRF's consult the training guide as a regular part of their preparation for training sessions. Sample activities, which provide a number of different approaches, are chosen and perhaps modified for use in training sessions. By simulation and role playing, PF's prepare for the kinds of behavior they will need in their field work. Specialists are encouraged to add to the supply of sample activities, as well as to adapt both the activities and the guidelines in the guide to specific situations encountered where they and PF's are working.

ASSESSMENT PROVISIONS

The training guide is not tested, except in an exploratory fashion, apart from the context of the RFD strategy. RFD specialist learning, based on the assistance given by NWREL staff trainers and use of the RFD Training Guide, is to be assessed as part of evaluating the total RFD strategy in two consecutive sites. Evalation of the first installation, now underway in Utah, is concerned with providing formative data for the further definition and refinement of the strategy. From the second installation will be ascertained the degree to which two kinds of objectives are achieved: Process objectives are concerned with the degree to which the strategy is implemented and outcome objectives deal with the extent to which desired effects are achieved en route and at the conclusion of the problem-solving cycle.

A series of instruments is being developed to measure the accomplishment of objectives related to RFD specialists and their role. These instruments will include logs, observation schedules, interview schedules, questionnaires, rating scales, checklists, knowledge tests, work sample reviews, and record reviews. All instrumentation, data collection, analyses of data, and presentation of results are the responsibility of the research and evaluation unit, rural education program.

RD 140 032

TIME REQUIREMENTS

Training is geared to the field tasks of PF's and is planned in advance of anticipated tasks, allowing PF's to practice behaviors needed to accomplish tasks.

The time required to complete one problem-solving cycle in a local community ranges from 1 to 2 school years, depending on the scope of the addressed problem, and on the tradeoffs each community makes in thoroughness, investment of time and resources, and similar factors. Therefore, one cycle of training and apprenticeship and use of the product by the RFD specialist takes from 1 to 2 school years.

IMPLEMENTATION PROCEDURES

RFD specialists are selected from State education agencies that continue to provide a base of support for the trainers as long as the RFD strategy is used. The product is most effective for RFD specialists when used in concert with their own training. No special equipment or facilities are required.

The product consists of two notebooks—one containing the guide, the other containing the sample activities. These are infinitely expandable by RFD specialists and can be tailored to individual needs and work styles.

Personnel Required for Product Adoption and Implementation

No personnel are required in addition to those who implement the RFD strategy at the local, regional, and State levels. Major strategy implementation roles at the various levels are: Local—process facilitator team, regional—RFD coordinator, and State—RFD coordinator (monitoring) and RFD specialists (training of PF's).

Only the PF's may work full time with the problem-solving process. Other roles are designated to existing personnel.

ASSURANCES AND CLAIMS

This product has been used (in its earlier forms) with approximately 60 potential PF trainers who had varying degrees of previous professional training. No evidence of harm has ever been observed or indicated by users. Formative data have been gathered consistently from these users to improve the usefulness of the product.

The product is consciously designed, based on developer values, to be free of racial, ethnic, socioeconomic, or sexual stereotyping, and patronizing or demeaning attitudes. The product will be subjected to rigorous internal quality assurance procedures and to expert and user review by which any questionable portion of the product can be identified and corrected.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 140 033

RURAL FUTURES DEVELOPMENT MANUAL FOR SCHOOL-COMMUNITY PROCESS FACILITATORS

Information, guidelines, and resources for those facilitating educational problem solving in rural communities

The *Rural Futures Development Manual for School-Community Process Facilitators* provides basic information, guidelines, and resources for the teams of external change agents (process facilitators, referred to as PF's) who facilitate educational problem solving in rural communities as part of the Rural Futures Development (RFD) Strategy. (See RFD Strategy descriptions catalog entry for a more detailed explanation of this problem-solving model.)

The primary purpose of the manual is to guide the work of PF teams with major participants in the problem-solving process: (1) The school-community group (SCG) a "third party" problem-solving group composed of community opinion leaders, school staff members, students, and on occasion, school board members, (2) the school staff, who provide valuable technical data to the SCG at each step in the problem-solving process and who also prepare for the impact of various problem solutions, and (3) the school board and school leaders, who encourage and support the work of the SCG and the school staff, in part, by increasing their own problem-solving capabilities over time.

The manual contains a model for consultation, the theory and rationale which support this model, and a set of procedures and resources for helping local participants adapt this model to a variety of sites.

SUBJECT AREA(S)

Process consultation to people engaged in collaborative problem solving is the subject of the RFD manual. Two aspects of process consultation are addressed: Group interaction, for example, interpersonal communication, conflict resolution, and decisionmaking; and group task, for example, data collection and analysis, weighing alternatives, and using resources.

Major topics of the RFD manual include: (1) RFD strategy values, assumptions, goals, and features, (2) the PF role, guidelines for behavior, self-assessment and building personal skills, (3) process facilitation throughout the RFD problem-solving process, including activities such as diagnosing needs, planning meetings on the basis of data, assisting other participants to develop process skills, and tailoring activities to a specific site; and (4) use of other RFD products with the school staff, school leaders, the school board, and the school community group.

INTENDED USERS AND BENEFICIARIES

The primary users of this product are PF's, either previously or simultaneously trained in the RFD training system. For them, the RFD manual is both handbook and training resource.

Ultimate beneficiaries of the product are the groups of people in rural communities with whom PF's work to solve educational problems, communities at large which strengthen their local problem-solving capabilities, and rural students who find increased educational opportunities available as a result of these local capabilities.

GOAL(S) OR PURPOSE(S)

The RFD manual's goals are: (1) To provide PF's with a working manual and retrieval system to guide their consultation with schools and communities engaged in the RFD strategy, (2) to provide a structure for PF trainees to use in assessing their competencies and planning their training activities with an RFD trainer; (3) to help PF's maintain a productive team relationship; and (4) to build a productive relationship with their hiring agencies, where understanding and active support of the PF team may be minimal at first.

PATTERNS OF USE

Process facilitators use this product as a textbook during formal training sessions and as a handbook resource during their apprenticeship and practice. Both format and content are flexible and are intended to be influenced by specific PF needs and preferences.

Each unit of the RFD manual moves from low learner interaction—statements requiring only reading or perhaps question response—to high learner interaction—sections requiring activity design, selection of resources, and so forth, for application to a site situation in which the PF is actively involved. It is assumed that PF's participate at least once in a training program, that they progressively increase their competence, and that they have continuing access to a training consultant.

ASSESSMENT PROVISIONS

Although there is presently no instrumentation used to select PF candidates, there are general criteria established for selection that include: Comparable previous training in related subject areas, acceptability to significant portions of client population, ability to be self-sustaining in a work environment that offers minimal role support, level of intellectual and verbal competence comparable to a university graduate student, and interpersonal behavior that exhibits values consonant with RFD values.

The manual itself is not tested, except in an exploratory fashion, apart from the context of the RFD strategy. PF learning, based on formal training, guided field experiences, and use of the RFD manual, is to be assessed as part of the total evaluation of RFD strategy in two consecutive sites. Evaluation of the first installation, now underway in Utah, is concerned with providing formative data for the further definition and refinement of the strategy. From the second installation, it will be ascertained the degree to which two kinds of objectives are achieved: Process objectives, which are concerned with the degree to which the strategy is implemented, and outcome objectives, which deal with the extent to which desired effects are achieved enroute and at the conclusion of the problem-solving cycle.

A series of instruments is being developed to measure the accomplishment of objectives related to PF's and their role. These instruments will include logs, observation schedules, interview schedules, questionnaires, rating scales, checklists, knowledge tests, work sample reviews, and record reviews. All instrumentation, data collection, analysis of data, and presentation of results are the responsibility of the research and evaluation unit, rural education program.

TIME REQUIREMENTS

The time required to complete one problem-solving cycle in a local community ranges from 1 to 2 school years, depending on the scope of the addressed problem and on the tradeoffs each community makes in thoroughness, investment of time and resources, and similar factors. Therefore, one cycle of training and apprenticeship and use of the product by the PF's also takes 1 to 2 school years. (See the catalog entry for *RFD Guide for Training Process Facilitators* for more detailed information about the training schedule.) The RFD manual is an inexhaustible resource for the PF's and is designed to accompany them throughout their practice.

IMPLEMENTATION PROCEDURES

PF's are selected from or recruited by regional educational agencies, which then continue to provide a base of support for PF's as long as the RFD strategy is used. The RFD manual is most effective for PF's when used with formal training and guided field experience (comparable to student teaching). No special equipment or facilities are required.

The product has two parts—a looseleaf notebook and a file box containing resources. Both parts are infinitely expandable by PF's and can be tailored to individual needs and work style over time.

Personnel Required for Product Adoption and Implementation

No personnel in addition to those who implement the RFD strategy at the local, regional, and State levels are required. Major strategy implemention roles at the various levels are: Local—process facilitator team; regional—RFD coordinator, and State—RFD coordinator (monitoring) and RFD specialists (training of PF's).

Only the PF's may work full time with the problem-solving process. Other roles are designated for existing personnel.

ASSURANCES AND CLAIMS

This product has been used (in its current and earlier forms) with approximately 75 PF's who had varying degrees of previous professional training. No evidence of harm has ever been observed or indicated by users. Formative data have been gathered consistently from these users to improve the usefulness of the product.

The product is consciously designed, based on developer values, to be free of racial, ethnic, socioeconomic, or sexual stereotyping, and of patronizing or demeaning attitudes. In addition, the product will be subjected to rigorous internal quality assurance procedures and to expert and user review through which any questionable portion of the product can be identified and corrected.

RESEARCH UTILIZING PROBLEM SOLVING (RUPS)

A training package to develop problem-solving skills of administrators and teachers

The *Research Utilizing Problem Solving* (RUPS) instructional system has two versions, one for teachers and one for administrators. The program gives teachers and administrators knowledge, skills, and techniques in retrieving and utilizing knowledge while in the process of identifying and diagnosing classroom or school problems and designing action plans to resolve them. Evaluation becomes a pattern of repeated objective diagnosis in this process. The design calls for a 5-day workshop, followed by two 3-hour meetings while engaged in a back-home application project using the RUPS process. Emphasis of the entire design is on teachers and administrators practicing their "do it" skills to perform the problem-solving process. Continuous active participation is demanded by using a simulation situation in which the trainee "helps" a fictitious teacher or principal solve a problem using the RUPS model.

To do this, participants develop skills for using a 5-step scientific method: (1) identify the problem, (2) diagnose the problem situation, (3) consider alternative actions, (4) try out an action plan, and (5) adopt the plan. Each instructional sequence provides: purpose, objective, leader preparation, list of participant materials, and procedures. School personnel who complete the training program learn to use techniques for defining, analyzing, and solving problems. They learn: (1) to write a problem statement; (2) to use paraphrasing; (3) to use the force-field analysis method; (4) select, create, and use data-gathering instruments; (5) to diagnose teamwork relationships; (6) to spot and analyze major data results; (7) to identify one's personal behavioral style in working with a team; (8) to give and receive feedback; (9) to use specific criteria to derive implications from research; (10) to brainstorm action alternatives; (11) to apply action guidelines; (12) to identify and evaluate small-group dynamics; (13) to plan and conduct a back-home project; (14) to evaluate action taken; and (15) conduct a back-home RUPS workshop.

SUBJECT AREA(S)

Systematic problem-solving skills is the subject area of the guide.

INTENDED USERS AND BENEFICIARIES

This guide is useful for educational administrators, teachers, and other school personnel. Other populations for whom this system may be adapted include industrial and community groups.

GOAL(S) OR PURPOSE(S)

The purpose of a RUPS workshop is to prepare educators to use techniques for defining, analyzing, and solving problems. The program provides teachers and administrators with competencies in: (1) applying four guideline criteria for writing a problem statement, (2) paraphrasing in interpersonal communications, (3) using the force-field diagnostic technique, (4) selecting and creating instruments for data gathering, (5) diagnosing teamwork relationships, (6) spotting and analyzing major results in data collected, (7) identifying one's personal style of operationalizing dimensions of teamwork behaviors, (8) utilizing concepts and skills of giving and receiving feedback, (9) using criteria for deriving implications from research findings, (10) brainstorming action alternatives to meet implications derived from findings, (11) applying guidelines for planning and implementing action alternatives, (12) identifying and evaluating small-group dynamics, (13) planning a backhome project, (14) evaluating solution plans, and (15) conducting a back-home RUPS project.

PATTERNS OF USE

These materials are sequentially organized toward the cumulative attainment of the stated objectives. The training design includes a great deal of pariticpant interaction for feedback, simulation trials, and interdependent action. For this reason, all participants are required to commit themselves to full attendance at all workshop sessions.

ASSESSMENT PROVISIONS

RUPS has been deemed appropriate as an initial experience and therefore has no prerequisites. Throughout the workshop, participants evaluate their learning by mutual feedback and self-testing such as paper-and-pencil tests and skill practice.

TIME REQUIREMENTS

These materials are sequential and cumulative. Each session is 90 minutes; a total of 30 hours of instruction is required in a 2-week workshop.

IMPLEMENTATION PROCEDURES

The training design requires that the total number of participants be a multiple of six. One leader can conduct a RUPS workshop with as many as 36 participants.

A workshop leader gives instructions from a manual, guiding participants through the training program. The leader should be familiar with the materials and design, but does not need to be an expert in the RUPS process.

All new leaders should personally experience workshop materials and design in the participant role before attempting to take on the leader role. Initial cotraining with an experienced leader is benefical to a new leader. Leaders without extensive experience in design should be cautioned about the possible need for revisions or additions that might arise in the group process.

The workshop site should include: a carpeted room, large enough to allow groupings of 6 and 12 to work without interfering with each other; comfortable chairs and tables for groups of 6 and 12; and beverages and refreshments available in the room, if possible.

ASSURANCES AND CLAIMS

Assurances

During a series of trial workshops, participants were repeatedly asked for feedback concerning this system. In addition to open-ended questionnaires, copies of problem identification and analysis statements created by participants during training were occasionally collected and constructive criticisms were used to revise the system. While occasional individuals stated that the system's content or form was not relevant for them, there were no reports that participants in this system had experienced physical, psychological, or sociological harm. This system trains participants to collect and use objective data from colleagues and students in an "action research" problem-solving procedure. It further provides numerous cautionary guidelines in applying the techniques of this process. It is explicitly concerned with reducing potential harm.

Social fairness issues were considered during interim rounds of trial and revision resulting in some early modifications of this system. While the generic "he" is sometimes used when referring to persons of either sex, the system is generally quite fair and has been positively accepted as such. A review panel of expert evaluators gave it a passing rating.

Claims

This system was designed with the intention that nonexperts would be able to conduct workshops. During the interim testing, the developers observed nonexperts successfully conducting workshops at Atascadero, California, and at Issaquah and Ellensburg, Washington. No developers were involved in five of the field-test workshops. The wide use of this system throughout the United States and in several other countries during the past 3 years supports a claim of easy replicability.

Field tests of this instructional system were conducted between 1969 and 1972, with 220 volunteer trainees from 6 field sites—1 in Montana, 1 in California, 2 in Texas, 1 in Washington, and a national educational research group meeting in Chicago, Illinois. Data collected from these trainees provide the following results:

(1) Seventy-six percent of the trainees perceived the training to be satisfying and worthwhile. Most of the negative responses came from two sites—one where many problems were reported and participants were strongly directed to attend the workshop, and another where participants had recently experienced positive effects of a "sensitivity training" workshop. At the latter, many objected to the comparatively high degree of structure in the RUPS design. These results, plus evaluations from earlier trials and evaluations shared with the developers from other settings, indicate a high degree of satisfaction can be expected among RUPS participants if they have appropriate expectations and have chosen to experience this workshop.

(2) Statistically significant cognitive gains were obtained, based on an analysis of the mean scores from 137 participants who responded to a 34-item test administered before and after the training.

(3) Fifty percent of respondents to a followup questionnaire 6 months after the training reported making some applications of skills learned.

(4) A followthrough impact study of classroom effects by teachers who receive this training was concluded in 1975. Results were not available at the time of this writing.

(5) An independent evaluation study conducted at the University of Idaho found significant attitude change on the part of teachers, in addition to cognitive and skill gains.

This system was developed over a 4-year period involving repeated rounds of trial and revision with K-12 teachers and administrators. Evaluation included pilot trials, interim formative testing, and a summative field test where developers were not involved.

SOCIAL CONFLICT AND NEGOTIATIVE PROBLEM SOLVING (NPS)

A 25-hour series of structured experience-based workshops to develop skills, personnel, and organizational insights required for bargaining and negotiation

Social Conflict and Negotiative Problem Solving is a structured, experience-based workshop requiring approximately 45 hours of instruction, preferably in a live-in conference setting. Emphasis is on active learner style with minimal dependence on instructional leaders. The participants are presented with multiple opportunities to involve themselves in learning about conflict at personal, interpersonal, and organizational levels. Participants are encouraged to establish and pursue their own learning goals and to support norms of openness to self-inquiry, risk-taking, and experimenting with new behavior. Opportunities are provided for personal reflection and integration. Emphasis is placed on application to back-home educational settings.

The training focus of this program is on helping individuals: (1) Perceive more clearly the phenomena they encounter associated with conflict in their organization and themselves, (2) experience and understand organizational and interpersonal processes that encourage a process of negotiative problem solving, and (3) develop skills and insights in dealing more openly with conflict.

Negotiative problem solving is defined as a process of seeking for solutions to social conflict, where the conflict is based on incompatible goals, values, or interests. This process does not assume a consensus on ultimate goals, but accepts differences as legitimate and outcomes as pluralistic. (It does assume that system survival and/or interdependence is necessary and agreed upon.) It requires ability to use skills and procedures of bargaining and negotiation.

Why such a program?

Schools have been the focal point of social and political controversy for several decades. Minority and ethnic groups have challenged the traditional assumptions and practices of American schools. Professional teacher groups have contested economic and power issues with local school boards. Conflicts within a school building or district (such as academic versus nonacademic, curricular versus extracurricular or noncurricular, open classrooms versus closed classrooms) may not always surface and be resolved. Many parents and students have become disillusioned with the quality of the educational experience. Current conflicts within the educational system and between education and the larger community are deeply rooted in differences in interests, values, goals, and functions of the various component groups and subgroups which comprise the larger system. These differences are intrinsic and natural to any evolving social organization. Schools have not always dealt adequately with the social conflict that results from these differences.

Effective alternatives for dealing with conflict require: (1) Individuals developing more appropriate perspectives and orientations toward conflict, (2) organizations changing their structures and procedures for dealing with conflict, and (3) the retraining of system members—decisionmakers and partisans alike—in skills of negotiative problem solving.

Participants have an opportunity to assess ways in which they respond to conflict under various conditions. They examine their tendencies toward responding to conflict by avoidance, accommodation, competition and/or coercion, sharing and/or compromising, collaborating, or negotiating. Opportunities will be provided to experiment with different strategies and to identify conditions when certain ways of dealing with conflict would be more appropriate than others.

Social Conflict and Negotiative Problem Solving is designed for a diverse and broad population of participants. The system is flexible in its groupings and uses dyads, trios, and large groupings in a variety of instruction designs.

RD 140 035

SUBJECT AREA(S)

This system is designed to provide conceptual awareness and experiential training in the following areas: Social conflict, organizational conflict, power, assertiveness, self-interests, interpersonal communication skills in conflict situations, and "negotiative" problem-solving skills.

INTENDED USERS AND BENEFICIARIES

This training system is designed for any adult (teachers, administrators, counselors, psychologists, curriculum specialists, and contract negotiators) in the educational system interested in improving competencies in social conflict and negotiative problem solving.

GOAL(S) OR PURPOSE(S)

This instructional system is designed: (1) To increase participants' acceptance of conflict as a natural part of social reality; (2) to increase participants' awareness of their own style and assumptions for coping with social conflict; (3) to increase participants' awareness of their own values regarding conflict and conflict utilization; (4) to increase participants' awareness of alternative ways of coping with conflict and the strengths and weaknesses of these alternatives under varying conditions; (5) to increase participants' ability to describe, analyze, and diagnose social conflict in organizational settings; (6) to increase trainees' skills in negotiative problem solving; and (7) to increase participants' understanding of major concepts and principles related to social conflict and negotiative problem solving.

PATTERNS OF USE

The workshop materials are sequentially organized toward the cumulative attainment of the stated objectives. The training design includes extensive participant interaction for feedback, simulation trials, and interdependent action. For this reason, all participants are required to commit themselves to full attendance at all workshop sessions.

The training is typically conducted over a 5- or 6-consecutive-day period, but may be divided into two sections.

ASSESSMENT PROVISIONS

There is no formal screening or placement procedure. However, the developers recommend that participants have prior workshop experience with a Northwest Regional Educational Laboratory instructional system such as *Interpersonal Influence*, *Interpersonal Communications* (IPC), *Research Utilizing Problem Solving* (RUPS), or *Group Process Skills* (GPS) before attending this workshop.

There is no formal testing. Participants are periodically asked to clarify their own learning goals and to assess them through self-reflection and peer observations and feedback. Participants complete a paper-and-pencil questionnaire at the beginning and end of the training, assessing their orientation toward conflict.

TIME REQUIREMENTS

Approximately 45 hours of instruction, preferably in a live-in conference setting is required. It can be conducted as either a preservice or inservice workshop, extending over 5 or 6 consecutive days or divided into two sections of 2 and 4 days.

IMPLEMENTATION PROCEDURES

This workshop can be successfully conducted with as few as 18 and as many as 36 participants. An ideal number is 30. The instructional system is designed for basic learning groups of three. The workshop needs to have at least four learning groups to insure an interesting and productive experience for participants.

The system is under development, and leader requirements have not been finalized as of this date. The workshop leader gives instructions from a manual guiding participants through the training program. The leader does need to be familiar with the materials and design, but does not need to be an expert in the "negotiative" process. This person should be experienced in handling group-process issues.

All new leaders should experience the workshop materials and design as participants before attempting the leader role. Initial cotraining with a leader who has previously conducted the workshop is an additional benefit to a new leader. Leaders without extensive experience in design should not attempt revisions, additions, or deletions from the design.

The workshop site should include: A comfortable, preferably carpeted, room large enough to allow six groupings of three to six to work without interfering with each other; comfortable chairs and tables for small groups (five to seven); and available beverages and refreshments.

ASSURANCES AND CLAIMS

Assurances of Harmlessness

Social Conflict and Negotiative Problem Solving is still under development and testing at the time of this writing. In exploratory trials, users of the system have been asked for feedback. There have been no reports to date of actual instances of, or serious concern about, physical, psychological, or sociological harm.

Assurances of Social Fairness

Social fairness issues are being given particular concern in creating this system. They are, in fact, given some attention as part of the content of the system. Guidelines supplied by the National Institute of Education concerning sexism are being followed.

Assurances of Replicability

The system is being designed to be used by persons who have some experience, but are not necessarily experts in either the content of the training or the conduct of experiential learning designs. Evaluation, to be completed by November 1975, will deal with this issue.

Claims of Effectiveness

Evaluation is currently underway and will be reported by November 1975.

Claims of Careful Product Development

This system is being created over a 15-month period. Pilot trials have been conducted, and evaluation data from participants have been employed in three revision cycles. Two additional revision cycles are anticipated before November 1975. Interim formative testing will be reported to the point of accomplishment in November 1975. At that time, it is anticipated that evaluation data will have been collected from 200 participants at 6 sites, with at least 1 site having nondevelopers as trainers.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 140 036

SWRL INSTRUCTIONAL DEVELOPMENT CONTROL AND MONITORING SYSTEM (IDCMS)

A minicomputer and software system designed to facilitate research and development on teaching and learning

The *Instructional Development Control and Monitoring System* (IDCMS) is a computer-based configuration designed to facilitate and support research and development on teaching and learning.

The hardware foundation for building IDCMS capability was configured by Ampex Corporation to SWRL specifications prepared in consultation with ASCI of Palo Alto. This configuration is shown on the following page.

An important consideration in selecting initial hardware was that it be of modular design and that it permit functional as well as modular growth of IDCMS. Each increment in capability is achieved with configuration hardware, computer software, and terminal enhancements to provide the functional characteristics necessary for a range of educational R&D applications.

The system is driven and monitored by a minicomputer. Connected to the computer are electronic devices for storing audio and video presentation materials. These are loaded using standard audio and video recording devices. Communication between the system participants is effected at IDCMS response stations that handle a flexible number of concurrent participants in a given inquiry.

A special language, the Experiment Control Language, has been developed to permit researchers to write applications programs, such as a logical series of commands to control the presentation of IDCMS protocols and generate statistical reports on characteristics that are embedded into the protocol presentations.

IDCMS makes possible significant investigations of instructional theory, media characteristics, instructional program characteristics, and individual characteristics whose dimensions may be manipulated singly or in combination in IDCMS inquiry.

SUBJECT AREA(S)

Instructional research and development, instructional media research and development, research in social sciences relevant to education, and simulation and modeling for policy research related to instructional issues are the subject areas.

INTENDED USERS AND BENEFICIARIES

For the most part, users will be researchers. However, the configuration has general usefulness for all persons concerned with systematic empirical inquiry in education. It serves as powerful demonstration instrumentation for illustrating the empirical manifestation of theory and principles in education.

PATTERNS OF USE

Users must have operational access to an IDCMS configuration, and it is most convenient to obtain this access by onsite presence. However, it is feasible to conduct inquiry using IDCMS from a remote location, emulating "batch mail" procedures of electronic data processing installations.

IMPLEMENTATION PROCEDURES

These procedures differ depending upon whether one is installing or using IDCMS in the same sense that installing and using a computer differ. At present, the two IDCMS configurations in the United States and the one in Germany appear adequate for the human resource base of users in the same sense that a few acceleratrons were adequate in the early days of atomic physics. For use of IDCMS, the most feasible arrangement is to contract SWRL or the Stanford Center for Research and Development in Teaching to obtain user materials and technical advisory assistance.

ASSURANCES AND CLAIMS

IDCMS components have been tested using standard engineering procedures. As a special purpose customized configuration, IDCMS is transportable, and its use is very general. Users at SWRL are required to conform to standard organizational guidelines to insure that no application will affect participants negatively or incorporate biases proscribed by statutes, regulations, or rules of the Federal Government and that each application incorporates the highest ethical principles of the professions involved in the inquiry.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Hardware configuration	1 per installation	300,000.00-500,000.00 depending upon components	Each configuration	
Software	1 per installation	Public domain	Each configuration	
User manuals	1 set per user	10.00 per set	Each user	

DEVELOPER/AUTHOR:

SWRL Educational Research and Development
4665 Lampson Ave.
Los Alamitos, Calif. 90720

AVAILABILITY

Present status specifications for hardware are available from SWRL. Configurations are operational at SWRL and Stanford. Phase I software is operational and transferable.

Phase II software will be fully operational and transferable by fall 1975.

SWRL claims common law copyright on these materials.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 140 037

SWRL INSTRUCTIONAL MANAGEMENT SYSTEM (IMS-3)

Computer software system, operation guides, and operational forms to allow school personnel and parents to monitor instructional programs

The *SWRL Instructional Management System* (IMS) is a simple and convenient means of providing information to teachers, principals, district administrators, and parents concerning the status of one or more instructional programs. IMS is designed for use with SWRL instructional programs, SWRL learning mastery systems, and any other programs that contain periodic resource-referenced evaluation.

IMS is available in two versions. When a scannable answer sheet format for student assessments is used, IMS includes a scoring and reporting service for teachers. When nonscannable student assessments are used, IMS relies upon teacher scores that are coded on special forms for IMS source data.

The operation of IMS requires no alteration of regular classroom procedures. Additional effort by school personnel is limited to providing a roster of initial program placement of pupils and the updating of the roster to show new and leaving students and other mobility events.

IMS regularly generates separate reports for each participating pupil/parent, teacher, school, and district. These reports are produced on a schedule during the year that is specified by the district, which may include up to eight specific dates when it would like to receive reports.

IMS resources for users include all necessary operational forms, operations guides for teachers, principals, and the district coordinator, and separate report interpretation guides for each of these groups as well as for parents.

IMS resources for purveyors of the system service include the computer software system and technical operation guides.

The IMS reports provide information concerning program status and pacing with the data aggregated and formatted separately to satisfy the differential "need to know" requirements of parents, teachers, principals, and district administrators. To insure that each group will find the provided information meaningful and useful, much development attention has been devoted to eliminating redundancy and conveying the information so that actionable conclusions may be derived directly from the reports. As a consequence of this development, IMS operations are manageable and minimally time consuming for school personnel; IMS services are cost feasible for purveyors; and IMS report information provides regular and reliable information to parties responsible for and interested in the effects of schooling. This information provides a means for: Crediting instructional accomplishments, identifying potential difficulties before they become instructional problems, and planning future instructional operations and procedures based on comprehensive program performance information.

SUBJECT AREA(S)

The subject area is instructional management information system.

INTENDED USERS AND BENEFICIARIES

IMS provides separate report information for students/parents, teachers, principals, and district administrators. The reports at the school and district levels are organized to encourage sharing of information regarding program accomplishments with the community and the public. A second-order benefit is general quality assurance data for the research and development (R&D) community and policymakers in education.

GOAL(S) OR PURPOSE(S)

The goal of this product is to provide readily interpretable information regarding instructional accomplishments of schools to those groups responsible for and/or concerned with such attainments.

ASSESSMENT PROVISIONS

The system uses the proficiency assessments that are incorporated into the instructional products and thus adds no additional assessment time.

TIME REQUIREMENTS

School personnel complete an initial roster of pupil assignments and keep this information updated. The chief professional time allocations are devoted to professional planning considerations derived from interpretations of the report information.

IMPLEMENTATION PROCEDURES

A coordinator is appointed by the district to supervise training and installation, arrange for the distribution of materials, and serve as a focal point within the district for questions that arise concerning IMS. Operations guides provide self-guided information for teachers, principals, and coordinator. Report interpretation guides that accompany the first set of reports are also provided for teachers, principals, and district administrators.

IMS source data are mailed to SWRL for processing, and reports are mailed at designated times to district coordinators for distribution to participating personnel.

ASSURANCES AND CLAIMS

The information is reported in a form that credits accomplishments rather than denigrates deficiencies. All information is aggregated and restricted to the recipients' need-to-know boundaries to discourage invidious comparisons of individuals: That is, parents receive information referencing their individual children; teachers receive information referencing their individual classes; and principals, their individual schools.

Data processing procedures protect the privacy of the participants and insure accuracy of the information that is provided.

IMS has been used with more than 100,000 students over the course of its development. Districts have included a range of demographic and education contexts.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Starter set, including rosters and operations guides	1 per teacher	1.00	Yearly	
Report interpretation guides	1 per report recipient	1.00	Reusable	
IMS processing		Varies with computer installation		

DEVELOPER/AUTHOR:

SWRL Educational Research and Development
4665 Lampson Ave.
Los Alamitos, Calif. 90720

AVAILABILITY

IMS-3, the third version of IMS, is now fully operational. SWRL claims common law copyright on the materials. Interested districts may contact:

SWRL Educational Research and Development
4665 Lampson Ave.
Los Alamitos, Calif. 90720

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 140 038

SWRL INSTRUCTIONAL PRODUCT SELECTION KIT

Resources for use in conducting inservice training in the selection of effective instructional products

The *SWRL Instructional Product Selection Kit* includes a complete set of resources for use in conducting workshops or inservice meetings that promote participants' skills in selecting effective instructional products. The materials provided in the kit are used to familiarize participants with important product selection considerations by involving them in those tasks required in actual product selection situations.

The kit includes seven components:

1. An instructor guide that suggests procedures for conducting workshops or inservice sessions.
2. Checklists of selection considerations that provide a systematic approach to analyzing, comparing, and identifying effective and reliable instructional products.
3. Booklets that discuss the rationale supporting the selection considerations presented in the kit. Each participant receives a booklet and checklist for use in product selection situations.
4. Record sheets, on which workshop participants review three simulated products at the beginning of the session. Later, after becoming familiar with the selection considerations presented in the kit, they again review the three products and compare the results.
5. Simulated program brochures that describe three elementary school programs. The brochures, patterned after publisher promotional materials currently on the market, contain sample pages from student and teacher materials. Using these brochures, participants can determine how well each of the three simulated programs meets selection considerations presented in the kit.
6. A filmstrip and audiotape that discuss selection considerations which aid in the identification of effective and reliable instructional products.
7. Sets of exercise items that provide practice in identifying instructional products that meet the selection considerations presented in the checklist.

SUBJECT AREA(S)

The kit promotes understandings related to the selection of effective instructional resources in all subject matter areas.

INTENDED USERS AND BENEFICIARIES

The kit is designed for use by professional organizations, text adoption committees, school board members, school advisory groups, graduate and undergraduate education classes, and other groups concerned with educational product selection. Development to date has included tryouts in college classes, inservice teacher meetings, and professional minitraining sessions.

GOAL(S) OR PURPOSE(S)

The kit is used in training sessions to develop participants' ability to select effective instructional products. The kit prepares users to perform the following tasks: (1) To idenofy in instructional programs and materials the presence of absence of necessary elements of a complete instructional product, (2) to determine the degree to which a given product meets the selection considerations presented in the kit, (3) to compare competing instructional products according to these selection considerations and (4) to use these considerations for product selection decisions in a variety of situations.

An operational set of criteria is provided for use in selecting instructional resources. In addition to concerns regarding instructional materials, emphasis is given to such selection considerations as: (1) Outcomes or instructional objectives the product may be used to attain; (2) assessment materials and procedures for use in determining outcome attainment; (3) reports of previous product use in a variety of school situations; and (4) installation requirements of the product, including the training of staff and monitoring the ongoing progress of pupils using the product.

PATTERNS OF USE

The kit includes all materials necessary to familiarize users with important instructional product selection considerations. The flexibility provided in the materials and procedures enables the instructor or workshop director to adopt workshop sessions to the specific needs and interests of participants.

Resources provided in the *SWRL Instructional Product Selection Kit* are typically used to conduct a workshop or inservice session that familiarizes participants with product selection criteria through active involvement in simulated selection situations. Participants examine illustrated brochures describing fictitious instructional products. These products are then ranked by participants in the order in which they would select or adopt them in their own school situations. After a filmstrip/tape presentation which describes criteria for the selection of effective instructional products, participants receive a copy of a booklet and checklist which outline these product selection criteria.

Exercise items are then completed by participants to practice determining whether given product descriptions satisfy important criteria for effective instruction. After this initial practice, participants use the product selection checklist to evaluate and rate fictitious products. These ratings are discussed, and the overall results are used as a basis on which to reevaluate participants' initial product selection. Extension activities may be used for further examination and application of the checklist criteria.

ASSESSMENT PROVISIONS

Participants demonstrate their acquisition of principles taught in the workshop as they discuss their product rankings and compare their initial and final product evaluations. Guidelines for the workshop director provide suggestions for using kit materials for further practice activities.

TIME REQUIREMENTS

The workshop can be scheduled in a single session or a series of sessions. Total time required for the conduct of the workshop is 2 to 3 hours.

IMPLEMENTATION PROCEDURES

Comprehensive information is provided for the instructor to assist in planning and conducting a workshop based on the *SWRL Instructional Product Selection Kit*. Suggestions are also presented for maximizing workshop effectiveness with various participant groups.

ASSURANCES AND CLAIMS

The materials and procedures composing the product have been designed for convenient use by the teacher or instructor with no requirement for specialized personnel. During tryouts involving college classes and inservice workshops, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schemes. Tryout inquiry procedures have served to assure teacher acceptability and product exportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance in sexual stereotyping, cultural and racial diversity, dangerous substances, religion, and the like.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Instructional product selection kit including guide, filmstrip/audiotape, checklists, program brochures, product selection booklets, product review record sheets, and exercise items	1 kit for an instructor and 12 participants	30.00	Filmstrip, tape, instructor guide, and simulated program brochures reusable	
Simulated program brochures (12 copies each)	1 set for each 12 additional participants	15.00	Reusable	—
Participant materials, including checklist, product selection booklet, product review record sheet, and exercise items (12 copies each)	1 set for each 12 additional participants	7.50	Yearly

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 140 039

A TRAINING PACKAGE FOR DETERMINING INSTRUCTIONAL PURPOSES

Materials for staff workshops in instructional planning and management

The training package consists of three separate sets of training materials designed to help school personnel increase their skills in, and knowledge and understanding of, instructional planning and management. Instructional planning is that area of educational administration concerned with providing educational opportunities for children. It requires establishing instructional program purposes, designing and implementing programs, and evaluating instructional programs. The training package is directed to the first of these three functions. The three units are "Setting Goals," "Analyzing Problems," and "Deriving Objectives." The units were developed so that each could be used by itself or in combination with any other of the units, thus enabling users to choose the particular unit that seems most likely to meet their needs.

"Setting Goals" consists of an introduction and four integrated training modules: Deriving district goals, refining goals into goal indicators, screening sets of goal indicators, and prioritizing goal indicators. Each participant assumes the role of a member of a special planning team. Working on the team, the participants derive and refine goals and establish priorities among goal indicators.

"Analyzing Problems" consists of an introduction and six modules. The titles of the modules indicate their content: Module 1—Which of the problem signals received warrant further consideration; Module 2—What student outcome problems the signals imply. As in the first unit, participants assume the role of a member of a planning team in a simulated school district.

"Deriving Objectives" consists of four modules: Module 1—The Goal Refinement Process; Module 2—Screening Objectives; Module 3—Analyzing Sets of Curricular Objectives (divided into a programed text covering educational taxonomies and a simulation); and Module 4—District Planning for Goal Refinement. This unit places greater stress on an understanding of the processes than on detailed definitions and criteria to be applied, although the latter are not ignored.

The training package also includes a coordinator's handbook containing necessary material for conducting the training in any of the three units. The material in the handbook is intended to be sufficient to permit a school staff member to conduct the training if time is taken to work through the units in advance.

SUBJECT AREA(S)

The subject of *Determining Instructional Purposes* is instructional planning and management—that area of educational administration concerned with providing educational opportunities for children. The area may be further defined as involving the establishment of instructional program purposes, the design and implementation of programs, and the evaluation of programs. This training package is directed to the first of these three functions.

INTENDED USERS AND BENEFICIARIES

These materials are intended for school personnel directly concerned with the design or selection of instructional programs to be implemented in classrooms. The specific role titles of such staff will vary from district to district but will likely include building principals, department heads, district curriculum specialists, and teachers serving on curriculum committees. The materials may also be found useful by district office administrators other than those with direct curriculum responsibilities, and by board of education members, parents, and students. The intended user group can best be defined by function rather than by particular role or title; the group need not necessarily consist of administrators.

GOAL(S) OR PURPOSE(S)

The goal of the training package is to assist in the preparation of school staff in writing more useful statements of goals and objectives for instructional programs. The general objectives for the package are to increase knowledge, comprehension, and skills in the process of selecting long-range goals and translating them into behaviorally stated goal indicators, analyzing instructional problems and determining where the available resources should be applied, and deriving objectives from the high-priority goals. Each of the three units that constitutes the package is directed to one of these general objectives.

PATTERNS OF USE

Although the numbering of the units ("1. Setting Goals;" "2. Analyzing Problems," and "3. Deriving Objectives") implies a set sequence, a different sequence or starting point may be appropriate. This depends on the purpose for which the training is being conducted. The units can be used either with existing school personnel or prospective teachers and administrators. The units reinforce each other, but each can be used independently. The coordinators can supplement each of the units with additional materials if they so desire. A unit can be used in the context of a regularly scheduled course or a special class or workshop.

ASSESSMENT PROVISIONS

The three units in the training package are similar, though not identical, in organization and types of materials included. Each unit contains a series of self-tests so that individuals can test their own knowledge and understanding of what they have read before undertaking team training activities. Suggested responses to the self-tests are also provided. No provisions are made for evaluating the overall performances of individuals at the conclusion of the units. If the coordinator wants to make individual evaluations, the developers suggest that the most appropriate way to do so is to present an additional, culminating assignment after training. Participants could be requested to apply the process covered in the unit(s) to a real-life school situation of their own choosing and write a paper summarizing the process they went through.

TIME REQUIREMENTS

The coordinator's handbook contains a checklist of tasks for each unit, including a suggested time for each task. These times represent the minimum times that the developers recommend be devoted to particular steps in training. According to these guidelines, "Setting Goals" will take 10-12 hours, "Analyzing Problems" will take 14-16 hours, and "Deriving Objectives" will take 10 hours for completion. The total time spent by any specific group, however, will vary greatly depending on such factors as its motivation, level of skill, and professional backgrounds. Ideally, the coordinator and the group members should decide at the beginning of the workshop how intensively they want to cover the materials and should be willing to condense or extend the allotted training time accordingly.

IMPLEMENTATION PROCEDURES

The training package requires no special equipment for its implementation. It is possible that the training activities may have to be fitted into a tight time schedule because of the participants' prior obligations, but scheduling will depend on the particular group.

ASSURANCES AND CLAIMS

The three units of the training package were developed concurrently, but field tested at different sites. External evaluation studies were conducted; the users interviewed by telephone represented 16 different sites and had used the units with approximately 542 school personnel and with 100 graduate students. These facts indicate that the training package is easily replicable and transportable. None of the external evaluation reports suggests that the product is in any way harmful. A careful reading of the training package did not reveal any social, ethnic, or sexual stereotyping or bias.

COMMUNITY SCHOOLS

Research on community schools: Administration, curriculum development, facilities, staff, and finance

This 48-page report is a digest of research findings on community schools. Written in a concise, readable style, the report analyzes the most important trends in this topic and points out the practical implications of major research findings.

The paper reports on the theory, history, and implementation of community schools, a topic that has received ever-increasing attention in recent years as community schools and community education development centers have been established at numerous sites around the country.

The major purpose of the report is to present the rationale and practical steps for the implementation of community schools. Major sections explain the administration and staffing of community schools, the development of a curriculum, the role of facilities, and the question of financing. Ways to insure full community utilization of the school through curriculum and facility design are emphasized. Potential local, State and Federal funding sources are listed. A 66-item selective bibliography is included.

SUBJECT AREA(S)

The community school concept and community education are distinguished from community control of schools, which is not directly a subject of this report. Curriculum development, educational facilities, educational finance, and other topics are referred to as they relate to community schools.

INTENDED USERS AND BENEFICIARIES

The report was written primarily for school principals (not limited to elementary level) and secondarily for any school personnel or other individuals interested in the topic. Through a cooperative arrangement with the clearinghouse, the National Association of Elementary School Principals published the report as part of a school leadership digest series.

GOAL(S) OR PURPOSE(S)

The major goals of this report are to produce a readable digest of the practical implications of research literature on community schools and to enhance the communication of research findings to school principals.

DESIGNING SCHOOL ORGANIZATIONS: THEORY, RESEARCH RESULTS, AND APPROACHES

A survey-feedback approach to the identification and solution of school problems

Designing School Organizations is a publication for educators which provides an alternative approach to the identification and solution of school problems. It is based on theory which indicates that the school cannot reach its full potential unless the school structure—the way administrators and teachers are organized to do their work—matches the complexity of the school's instructional program, and both are properly suited to the school's environment.

The volume is organized into four parts. Part I, a theoretical section, is intended to give school administrators an understanding of organizations. It focuses on the structure, programs, goals, processes, and environment of organizations. The interrelationships among these elements and their implications for the various levels of school organization (classroom, school, and district) are discussed.

Part II is a research section. Its main concern is "What is known about school organizations and how they function." The majority of the research reported comes from a 3-year study of school organization conducted by the Environment for Teaching Program, which gathered longitudinal data on 34 school districts and 188 elementary schools. The discussion focuses on such areas as the relationship between organizational features and instruction at the three levels of school organization; the relationship between environment, organizational structure, and educational effectiveness; and the relationship between team organization and teacher morale. This discussion indicates the possible outcomes to be expected when the theories of part I are used to make changes and solve school problems.

Part III is an action or strategy section. Its purpose is to introduce administrators to specific techniques that can be used in identifying and solving problems or making desired changes. It introduces the concept of organizational development, or the use of knowledge from the behavioral sciences to bring about change. The major emphasis, however, is on a five-stage, survey-feedback approach which helps educators to recognize school problems and evaluate solutions. These stages are:

1. Information gathering and diagnosis—designing and conducting a survey to gather information about the organization, its structure, environment, and program, and analyzing the information to identify or pinpoint organizational trouble spots;
2. Developing an organizational approach to problem solving—communicating a structural perspective of organizations to teachers and administrators;
3. Feedback—communicating to participants at both policy and peer levels the results of the information-gathering survey, and using the organizational problem-solving model to highlight and develop consensus on possible problem areas;
4. Identifying strategies for change—selecting a strategy for bringing about change or developing congruence between the organization's structure and its environment or program;
5. Evaluation—assessing the effects of the change strategy.

Part IV presents case studies showing how this approach has been applied in schools. Concrete examples of the organizational change process and its results illuminate the pitfalls and the opportunities presented by an approach which combines objective information, organizational theory, and a highly participatory and interactive process for identifying and solving school problems.

SUBJECT AREA(S)

The subject areas are evaluation, school administration and organization, and problem solving.

INTENDED USERS AND BENEFICIARIES

The volume is intended for use by school administrators. The survey-feedback process is applicable in small or large school districts or individual schools at both the elementary and the secondary levels. The manual will also be of use in college courses for the preservice training of teachers and administrators.

GOAL(S) OR PURPOSE(S)

The school administrators using this manual will be able to bring about systematic organizational change or improvement in their schools or districts based on a sound grasp of relevant theory and research findings, knowledge of specific survey-feedback approaches, and case studies showing how this approach has been applied.

PATTERNS OF USE

The survey-feedback structural approach requires the school or district to establish policy and peer groups representing all those potentially affected by the change process (administrators, teachers, students, parents, and other community members).

ASSESSMENT PROVISIONS

The effectiveness of the approach described in this manual will be determined by the degree to which actual changes in school organization are made and found to be cost effective.

TIME REQUIREMENTS

The time required for this product will vary with the severity of the problems identified and the commitment of the school staff to the effort needed to solve them.

IMPLEMENTATION PROCEDURES

The volume is self-contained. Time and other costs required to make full use of it depend on the commitment an individual school district is willing to make.

ASSURANCES AND CLAIMS

Assurances

The knowledge base for *Designing School Organizations* is drawn from several years of research, culminating in a longitudinal study carried out in 188 schools in 34 districts in 6 counties. Staff members of these schools have contributed to the formation of both the relevant theory and the survey-feedback approach. Workshops on implementing the approach have been conducted with groups from the Association of California School Administrators, and a formal affiliation has been negotiated between SCRDT and ACSA providing for further field testing, technical assistance, and dissemination arrangements. Feedback from previous presentations has indicated that the approach is transportable and replicable. No evidence of negative effects or social bias in the materials has emerged from the workshops.

Claims

Reactions to the workshops have been strongly positive. Feedback from the various contacts is being incorporated into the final revision.

DEVELOPING OPEN EDUCATION IN AMERICA

Community and school environment prerequisites for open learning

Developing Open Education in America is for teachers, prospective teachers, principals and other administrators, and parents. It is not intended to describe the appearance or the benefits of an open classroom or to give directions and inspiration for the task of creating one. Rather, it is intended to stimulate thought about the conditions required within a school system if teachers are to be able to move toward openness.

Substantial and lasting change—affecting many teachers and children, not just a few classrooms—calls for substantial, long-term help for teachers from others in the school community. This need is amply demonstrated by the experience of the open-education movement in England, where the principal, curriculum, adviser (or resource teacher), teacher education, and relationships with parents all function to energize—or at least to minimize interference with—the teacher who resolves to change. In the United States, wherever open education is practiced on a scope broader than the single classroom, one also finds reliance on one or more of these "enablers" for teachers. This book is a report of the varied ways in which several open-education projects in American public schools have provided more than token support for teachers as they strive toward real change.

The book is divided into seven chapters: Open Education in America: Native or Transplant?, Process or Model?, A Different Role for the Principal, Creating the Curriculum, A New Resource—The Advisor, The Teacher as Learner, Relationships with Parents, and Evaluating Children's Growth. A short bibliography of references and curriculum materials, and questions for review, discussion, school profiling, or problem solving are included in the appendixes.

SUBJECT AREA(S)

The subject area is open education.

INTENDED USERS AND BENEFICIARIES

The intended users are teachers, prospective teachers, principals and other administrators, and parents who are interested in examining the open-education environment.

ASSURANCES AND CLAIMS

A prototype of the book was field tested with a group that included teachers, parents, resource teachers, student teachers, a teacher center director, principals, and county office personnel. Revisions were made based on participants' comments; the final draft was reviewed by a panel of leaders in open education.

DIRECTORY OF ORGANIZATIONS AND PERSONNEL IN EDUCATIONAL MANAGEMENT

A sourcebook of educational administration: the subject area and dissemination policy of the leading organizations and researchers

The directory, an 82-page reference tool, was compiled to help educational practitioners and researchers locate information about research in educational management. The fourth edition lists 152 organizations and 535 individuals.

The section on organizations is designed to guide users to information sources. Each listing indicates the organization's policy for supplying information on request and its available publications. This section is especially useful to practitioners, who can identify sources of information or other services provided by the organizations. Unlike previous editions of the directory, the latest excludes profitmaking organizations.

The second, and larger, portion of the directory lists subject areas, research affiliations, and publications of 535 researchers interested in various aspects of educational administration. The primary purpose of the personnel section is to facilitate communication among researchers, who can use it to locate others doing work related to their own.

Two cross-referenced subject indexes and a geographic index are other features of the directory. Growth and change in the field of educational management are reflected in the subject indexes. For instance, the number of entries on secondary schools has tripled since publication of the third edition, and there are four times as many entries on special education. The appearance of new index topics—women, alternative schools, open education, and futurism—reveals shifting interests among researchers.

SUBJECT AREA(S)

The subject area is educational management, as used to define the scope of the directory, which includes all aspects of the leadership, administration, and structure of public and private educational organizations at all levels and the provision of facilities for their operation.

Specific topics receiving particular attention include accountability, alternative schools, collective negotiations, community schools, computers, educational facilities, evaluation, school finance, and systems approach.

INTENDED USERS AND BENEFICIARIES

Anyone—administrator, school public relations director, planner, designer, teacher, and researcher—involved or interested in educational management will find the directory a useful resource. Practitioners will benefit particularly from the information on specific publications and other information resources available from organizations. Researchers will be interested in identifying colleagues in the personnel section who are doing work related to their own.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To guide users to sources of information on educational management; (2) to facilitate communication among researchers; and (3) by means of these objectives, to contribute to the overall improvement of the practice of and research in educational management.

FREE/OPEN SCHOOLS

Alternative, experimental, and traditional schools:
A comparison

This paper describes the educational movement toward alternative schools and suggests further sources of information concerning this change in American education. Following an analytical comparison of open and traditional schools, the author discusses some of the most important perceived problems related to open schools. Problems noted are financing, staffing, difficult students and parents, noise levels in open areas, personal space, attendance and advising, and reentry into traditional schools. An annotated bibliography includes not only related printed material but also a list of organizations that the reader may find helpful in further explorations related to free and open schools. Information is provided to the user concerning the availability of some of the documents from the Educational Resources Information Center (ERIC) microfiche collection.

SUBJECT AREA(S)

Alternative, experimental, and traditional schools; educational change, development, and problems; and open education.

This paper introduces terminology; gives analytical description of open versus traditional schools, including custodial and managerial aspects, social status and social relations, indoctrination and value formation, and education; discusses common problems of both types of schools; and provides an annotated bibliography.

INTENDED USERS AND BENEFICIARIES

The intended users of this paper are school administrators (kindergarten through adult level), parents of schoolchildren, and kindergarten through adult-level teachers.

GUIDE TO THE DEVELOPMENT OF A REGIONAL CONSORTIUM OF STATE DEPARTMENTS OF EDUCATION

A developmental history of the Appalachian Regional Consortium

This document presents a description of the activities conducted in developing the Consortium of State Departments of Education in the Appalachian Region and the rationale supporting each organizational activity. It is composed of three major sections: (1) Preliminary organizational activities, (2) formal organizational activities, and (3) programmatic development activities. Appendixes of the document contain an agreement of incorporation and a set of Consortium bylaws.

SUBJECT AREA(S)

The subject of the *Consortium Guide* is the development of a formal organization of State departments of education.

INTENDED USERS AND BENEFICIARIES

The target audience of the *Consortium Guide* is State department of education officials concerned with developing cooperative working arrangements with other State departments of education.

GOAL(S) OR PURPOSE(S)

The purpose of the *Guide to the Development of a Regional Consortium* is to present to those interested in developing similar organizations a tested pattern of activities found to be useful in initiating a formal interstate organization.

PATTERNS OF USE

The subject matter of the *Consortium Guide* is sequenced in such a manner that those considering the initiation of an interstate organization can follow step by step the activities projected in the document, beginning with those activities designed to establish a need for the organization and ending with activities designed to evaluate the total process.

DEVELOPER/AUTHOR:

Division of Diffusion
Appalachia Educational Laboratory, Inc.
P.O. Box 1348
Charleston, W. Va. 25325

AVAILABILITY

The *Consortium Guide* was distributed to key State department of education officials throughout the United States in November 1973. A limited number of copies of this document are available through the Appalachia Educational Laboratory, Inc., in Charleston, West Virginia, and it may also be found in ERIC. There are no plans to revise or republish this document.

ASSESSMENT PROVISIONS

No provisions have been made for assessing the effectiveness of the implementation of the *Consortium Guide*.

TIME REQUIREMENTS

No time requirements have been established for the implementation of the *Consortium Guide*.

IMPLEMENTATION PROCEDURES

No special equipment, facilities, services, or organizational changes are required.

MATERIALS AND EQUIPMENT

No additional materials, equipment, or personnel are required for implementation.

ASSURANCES AND CLAIMS

The procedures and activities recommended in the *Guide to the Development of a Regional Consortium* have proven effective in the development and operation of a multistate consortium of State departments of education. At the time the guide was written, the consortium had not been in operation long enough to properly evaluate the long-range effectiveness of either the activities carried out in developing the organization or the model charter and bylaws.

A GUIDE TO ORGANIZING SHORT-TERM STUDY ABROAD PROGRAMS

Information on arrangements for study abroad for groups of high school and college students

This guide is designed for those interested in organizing and/or participating in short-term study-abroad programs. The following main topics are related in detail: The nature of the program; the budget; winning administrative approval for the program; announcing the program; orientation; the program director, the campus, courses, and itinerary; guided tours; and social events, recreation, and sports. Readymade study-abroad programs and foreign study opportunities in the Western Hemisphere are briefly discussed.

SUBJECT AREA(S)

This guide gives practical information concerning arrangements to be made for study abroad by groups of high school and college students under the supervision of individuals who lack experience in the travel industry.

INTENDED USERS AND BENEFICIARIES

Although intended for the foreign language teaching profession, this guide will be of aid to anyone contemplating the establishment of a short-term study-abroad program.

THE IMPACT OF LEGAL DECISIONS ON THE FUTURE OF EDUCATION

Court decisions affecting teaching and teacher education

After setting out some statements on ideologies which have contributed to the melting-pot theory of education, the author examines the rationale for teacher-licensing procedures and the interpretation of title VII, which gives protection from discriminatory practices as it affects the licensing of teachers. Recent court opinions are discussed in relation to the declared need for a principle of neutrality in respect to language, by which the language or dialect of any student should not be disparaged or denied. Examples involving Chinese-speaking and Spanish-speaking students are cited. The Treaty of Guadalupe Hidalgo between the United States and Mexico in 1848 recognized the differences in customs, traditions, and language of the people of New Mexico; and the ninth amendment to the Federal Constitution provides grounds for claiming the right to such differences by all U.S. citizens.
Court cases dealing with obscenity, the study of comparative religion, Indian education, and the traditions of the Amish community are examined in this context. A model for preparing educational personnel to assist in the building and preservation of community identity is proposed. It would give primary consideration to the sufficiency of the individual and the development of decent and humane communities.

SUBJECT AREA(S)

Teacher licensing procedures, court decisions affecting teaching, and teacher education.

GOAL(S) OR PURPOSE(S)

The goals of this product are to outline court litigation and other legal decisions relative to teacher selection, certification, assessment, and admissions; and to aid in the development of due-process procedures to protect the rights of professionals, students, and the constituency of schools and colleges.

PARENTAL AND COMMUNITY INVOLVEMENT IN EDUCATION AND TEACHER EDUCATION

History, model programs, and benefits of parental and community involvement

This examination of parent and community involvement in elementary and secondary education is in two parts. The brief first section considers the historical aspects and identifies possible kinds of involvement and the benefits that result, as well as some of the obstacles that may be encountered. The second section is an extensive review of the literature, including the following topics: Community involvement, with subsections on the principles of community involvement, school constituency organizations, approaches to community involvement, and community education; higher education involvement, with subsections on community colleges, universities, teacher centers, and the preparation for and professionalization of community education; and parent involvement, with subsections on the levels of such involvement, a model, parental participation and attitudes, cultural identity and self-concept, academic gains, desegregation, and guides for implementation.

SUBJECT AREA(S)

The history of parental and community involvement, notable programs, and benefits of such programs are the subject of this publication.

INTENDED USERS AND BENEFICIARIES

The intended users of this product are collegiate and local- and State-agency personnel, lay groups, and boards of education.

GOAL(S) OR PURPOSE(S)

This monograph provides a needed information base on the subject of parental and community involvement in education and teacher education. Highlights of programs are noted.

STUDENTS' RIGHTS: A GUIDE TO THE RIGHTS OF CHILDREN, YOUTH AND FUTURE TEACHERS

Case histories of student rights to freedom of expression, search and seizure, dress, invasion of privacy, and discipline

After a preface in which Judge Robert Landry cites the importance of the Gault decision, the paper summarizes the rights of students in elementary and secondary schools. This is presented through case histories. The decisions are grouped into the categories of freedom of expression, search and seizure, dress and grooming, invasion of privacy, and discipline. The rights of students in programs of teacher education are then discussed in 10 parts: The right of petition; the rights of due process and equal protection; the rights of speech and press; the right of freedom of religion; the rights of person, property, and privacy; the right to dissent; the right against self-incrimination; and the right to trial by a jury of peers. The final section presents a bill of rights for future teachers. Student teachers' and interns' rights are elaborations and extensions of the previous analysis on the rights of children and youth in lower schools.

SUBJECT AREA(S)

This document summarizes the legal rights of students in lower schools and in teacher education programs as interpreted in the courts.

INTENDED USERS AND BENEFICIARIES

The intended users of this document are students, particularly teacher education students; public school teachers and administrators; teacher educators; and those concerned with the legal rights of the profession.

GOAL(S) OR PURPOSE(S)

The goals of this document are to inform the user of the legal facts regarding student rights in elementary and secondary schools, and to establish guidelines for rights of student teachers at a time when legal issues in the teaching profession are being debated.

PLAYGROUND FACILITIES AND EQUIPMENT

A report on implications of major research findings on playground facilities and equipment

This 32-page report is a digest of research findings on playground facilities and equipment. Written in a concise, readable style, the report analyzes the most important trends in this topic and points out the practical implications of major research findings.

The paper reports on contemporary thinking about play as a learning experience, playground equipment designed to induce specific types of learning, and development of new design criteria.

The major purpose of the report is to illustrate the theories of play as a learning experience and the theories of equipment design, and to show practical steps for planning playgrounds that provide the desired learning experiences. A major section explains the planning process, including concern for the needs of children, parents, and the community; financial considerations; and equipment suggestions. Examples of innovative playgrounds are given, and playgrounds for the handicapped are discussed. A 55-item selective bibliography is included.

SUBJECT AREA(S)

Playground facilities and equipment are discussed in their relationship to the concept that children learn from play and that what they learn is affected by playground design and equipment quality. Theories of equipment design and planning of playgrounds are treated in this context.

INTENDED USERS AND BENEFICIARIES

The report was written primarily for school principals (not limited to elementary level) and secondarily for any school personnel or other individuals interested in the topic. Through a cooperative arrangement with the Clearinghouse, the National Association of Elementary School Principals published the report as part of a School Leadership Digest series.

GOAL(S) OR PURPOSE(S)

The goals of this report are to produce a readable digest of the practical implications of research literature on playground facilities and equipment and to enhance the communication of research findings to school principals.

SOURCEBOOK OF TRAINING PRODUCTS IN INSTRUCTIONAL PLANNING AND MANAGEMENT

A catalog of training products with a user's guide to product review and selection

The *Sourcebook of Training Products in Instructional Planning and Management* was developed to increase the skill, knowledge, and understanding of school personnel in the area of instructional planning and management. Its purpose is to increase awareness of the kinds of products that are available for providing training in instructional planning and management, and to provide sufficient information about these products to permit a preliminary screening in the process of planning for training.

The book has three major sections. The first section surveys instructional planning and management and includes some guidelines for reviewing and selecting materials to train personnel in this area of staff development. The second section contains descriptions of 15 program packages that can be implemented in a school district to meet specific needs for training in instructional planning and management. Many of these packages may also be used in college or university courses. The descriptions are generally three or four pages long and contain enough information to allow most users to decide whether to preview the program package itself. The third major section is an annotated list of 27 supplementary training resources that can be useful in complementing a training program in instructional planning and management.

A product description was included in the *Sourcebook* if the product met all the following five criteria: (1) The product was intended to provide or support training activities; (2) the training was designated for middle-management school personnel at the preschool, elementary, or secondary level; (3) the training was in the content area of instructional planning and management; (4) the completed product would be available for use by January 1975; and (5) the product had been made available within the last 5 years. The 42 products that met these criteria were selected from a pool of 152 products.

SUBJECT AREA(S)

Subject areas are instructional planning and management: that area of educational administration concerned with providing educational opportunities for children. This area may be further defined as involving the establishment of instructional program purposes, the design and implementation of programs, and the evaluation of instructional purposes.

INTENDED USERS AND BENEFICIARIES

The *Sourcebook* was designed for all personnel who may have a stake in the selection and conduct of instructional planning and management training activities—teachers, department heads, principals, curriculum specialists, assistant superintendents, or superintendents at preschool, elementary, and secondary school levels.

GOAL(S) OR PURPOSE(S)

The goal of the *Sourcebook* is to provide school people with efficient and effective information on available training products. It is intended as a tool to increase awareness and understanding of new products for training personnel in program goal setting, planning development, and evaluation.

PATTERNS OF USE

The *Sourcebook* is an aid to instructional planning, and the particular way in which it is used depends on the immediate needs of those who consult it.

MATERIALS AND EQUIPMENT

The *Sourcebook* costs $3.95.

ASSURANCES AND CLAIMS

A review form of the *Sourcebook* containing 15 programs and 25 resource descriptions was produced in August 1974. The book was sent to the individual or organization responsible for the development and/or distribution of each of the 15 programs described, with a request that the description be reviewed for accuracy. The entire book was also sent for review to three people judged to be particularly knowledgeable about the needs and perspectives of educational management and to two specialists in educational information dissemination and utilization. All of the reviewers expressed the belief that there is a real need for a product like the *Sourcebook*. None thought that the criteria used in the selection of products for description limited the extent to which the book could be useful in meeting the needs of school staff.

RD 140 051

All generally agreed that the book fulfilled its function as an information resource tool, that it compared favorably with other available information resources, and that it was not redundant with existing information documents. Their comments indicate the *Sourcebook* is transportable; its use does not require the presence or assistance of the developer.

An examination of the *Sourcebook* does not reveal any form of social bias, including ethnic and sexual stereotyping.

STUDENT PRESS RIGHTS: STRUGGLES IN SCHOLASTIC JOURNALISM

Court cases and decisions concerning student publications and underground newspapers

The purpose of this monograph is to acquaint journalism teachers, faculty advisers to student newspapers, administrators, and students with the court cases and decisions which have been made concerning student publications and underground newspapers. The chapters in the book include "Students' Rights: Background," which discusses the impact of the first amendment on the student press and stresses the importance of free expression for high school students; "Students' Rights: Development," which examines the effect of the "Tinker" decision in establishing at which point the student expression may be curtailed if school officials forecast a disruption of educational activities; "Students' Rights: Particular Circumstances," which presents cases exploring students' rights of expression on and off campus grounds; "Students' Rights: Administrative Regulations Allowed by Courts," which considers the powers of school administrators in dealing with student expression and cites several cases in which the courts upheld the administrators; and "Students' Rights: Additional Matters," which discusses cases concerned with the advertising and sales of student publications, the reinstatement of students following litigation, and the still-undefined role of the publications adviser.

SUBJECT AREA(S)

Journalism, freedom of speech, court litigation, student rights, student publications, censorship, school publications, school newspapers, secondary education, due process, and administrator role

INTENDED USERS AND BENEFICIARIES

The intended users of this product are secondary school teachers and college professors of journalism.

YEAR-ROUND SCHOOLS

Parent, teacher, and taxpayer questions and answers on the topic of year-round school

This 48-page report is a digest of research findings on year-round schools. Written in a concise, readable style, the report analyzes the most important trends in year-round schools and points out the practical implications of major research findings.

The paper reviews literature dealing with the advantages and disadvantages of year-round schools. It examines some of the criteria developed by authorities to help school systems determine whether year-round plans are feasible in their particular cases. Plans in operation are surveyed, and ways in which school districts may explain the plans to parents, teachers, and taxpayers are considered.

The major purpose of the report is to review some frequently raised questions, issues, and suggested solutions. Chapters deal with the question of economics (Is money saved?) and the question of quality (Is education improved?). Other sections include planning the program after assessing the needs and selling the program by obtaining the involvement of the community and the commitment of staff and students. Operational plans—where they are and how they are doing—are surveyed. A 76-item bibliography is included.

SUBJECT AREA(S)

The year-round school concept includes a number of school calendar plans varying the time that students spend in school during a year. Trimester, quarter, and quinmester plans, as well as continuous school-year plans (including multiple trials and flexible all-year plans) are discussed.

INTENDED USERS AND BENEFICIARIES

The report was written primarily for school principals (not limited to elementary level) and secondarily for any school personnel or other individuals interested in the topic. Through a cooperative arrangement with the clearinghouse, the National Association of Elementary School Principals published the report as part of a school leadership digest series.

GOAL(S) OR PURPOSE(S)

The major goals are to produce a readable digest of the practical implications of research literature on year-round schools and to enhance the communication of research findings to school principals.

GUIDANCE
AND
COUNSELING

1161

OVERVIEW

LIBBY BENJAMIN
The University of Michigan
Ann Arbor, Michigan

The field of guidance and counseling involves working with individuals and groups in a variety of settings to help them to understand more fully their human potential and to use this knowledge to reach a higher level of self-fulfillment and become contributing members of society. The major goal of those working in the field is to promote in individuals the understanding and skills required for self-awareness, decisionmaking and problem-solving, and making constructive plans and decisions.

Individual counseling by spiritual leaders, parents, physicians, respected colleagues, and friends has existed for centuries. However, guidance and counseling began formally as a field in the early 20th century, growing out of the need to help people make appropriate occupational choices. Since that time, the field has broadened to include assistance to individuals in all aspects of their lives. In recent years the field has given increased attention to career development and life planning. Over 350 institutions of higher education now offer graduate training in counseling and guidance, which has produced counselors found in most secondary schools and colleges, with growing numbers found at the elementary level.

The remarkable growth of the field of guidance and counseling is due to a number of factors, indicative of the vastly changed nature of society itself. The conflict and anxiety found in contemporary society can be attributed to factors such as stimulus overload information bombarding us from all sides, creating unlimited choices and mobility, persons moving and drifting. These factors have contributed to the current barrier of separation and isolation in society. The changing nature of society works to the detriment of warm human relationships. Therefore, a major focus of counseling efforts has been on enhancing human relationships so that persons communicate more effectively on all levels of interaction. In this environment, individuals need support and tools to deal with stresses inherent in the society so that they can cope with and function in society, rather than being debilitated by the forces.

Also society is experiencing the social and political emergence of newly defined interest groups, such as women, minorities, older persons, and handicapped, who are assuming new roles and responsibilities. These individuals need to learn new skills in order to deal appropriately with the new opportunities available to them.

Dr. Libby Benjamin is the Associate Director of the Counseling and Personnel Service Information Center. The Center is affiliated with the School of Education of the University of Michigan in Ann Arbor, Michigan.

Because the environment and the individual within the environment are part of a dynamic unit that is always changing, individuals must continually review, revise, or renew their goals. Consequently, new skills are needed to establish life career plans and goals, overcome obstacles toward achieving these goals, and adapt to inevitable change. These are concerns that formal education has not traditionally dealt with. However, schools are increasingly recognizing the need to provide students not only with formal academic education, but also with the skills needed to cope with the many roles played out in adult life as citizen, parent, employee, pursuer of leisure time, spouse, and coworker.

Because of these present concerns, the counseling profession is continually examining and researching its efforts to provide individuals with helpful and growth-producing skills. The trend towards accountability in counseling, exemplified in the emphasis on competency-based programs incorporating systematic evaluation of outcomes and quantifiable evaluation measures of skills attainment, has had great impact on the profession. For example, researchers are increasingly assessing the effectiveness of various kinds of counselor interventions individual, group, peer, system. These approaches are tested in light of growing numbers of theories and methods in counseling behavior modification, transactional analysis, gestalt therapy, biofeedback, and group therapy. The relationship between specific counselor practice and student/client outcomes has become as important as the different processes involved. Other studies underway deal with determining the efficacy of alternate modes of counseling, exploring differential staffing, peer counselors, and computerized counseling programs.

Increasingly, counselor education institutions are gearing up their programs to respond to these new demands. The traditional programs that have focused on training the counselor in the one-to-one counselor/client relationship have been broadened to include counselor training in other kinds of skills, such as incorporating skill training in needs assessment, writing behavioral objectives, and utilizing measurement techniques. This trend toward more empirical analysis is reflected in different areas, such as career development in which studies of adolescent development are underway with the purpose of assessing the impact of various factors affecting the individual's career decisions.

Needed research

In counseling, just as in the larger field of education, where research focuses on learning, some problems remain unresolved. For example, what is the optimum intermixture of various practices to reach a given behavioral outcome use of individual vs. group approaches, use of outreach and support personnel, or use of multimedia learning resources? How can these be combined to accomplish maximum learning and growth? What is the best way of determining clients' needs so that the most appropriate assistance and resources are available to them? What methods or approaches are most effective in work with different population groups minorities, handicapped, drug abusers, etc.? What is the optimum length of treatment? Can most client needs be met through short-term therapy, or is determination of treatment time an intuitive decision made by the counselor? Is differentiated staffing effective? These are some of the issues that will affect the adequacy of counselor strategies in facilitating behavior change.

Counselors are faced with additional problems in conducting followup studies of persons who have been involved in various assistance programs. Clients' feedback about change or improvement after elapsed time is important to further research efforts, since some evidence exists to suggest a high rate of regression to prior behaviors. A major problem results from the research process itself. Investigators encounter difficulty in obtaining research samples of adequate size and in developing appropriate statistical techniques to deal with such small samples. Many groups are reluctant to become research subjects, and those who are willing often give biased results because of the psychological effects inherent in the knowledge of being a research subject.

NIE contributions to field

Products developed under the sponsorship of the National Institute of Education represent an attempt to respond directly to some of these research trends and practitioner needs. Even though information exists, counselors have difficulty in acquiring the most comprehensive, relevant, and up-to-date resources. The major thrust at the Educational Resources Information Center/Counseling and Personnel Services Information Center (ERIC/CAPS) has been to coalesce the most current information and resources into a form directly accessible and usable by various groups. One important function is to identify needs and problems that have not yet been clearly defined by the profession, to collect and analyze relevant information, and thus attempt to aid the profession in developing programs and products to respond to those needs.

Several publications of the Center address the broad scope of the literature. For example, *Impact* magazine was designed for this purpose. In colorful, readable format, counselors have access to the most current developments in the field. For an extensive bibliographic collection, *Searchlights* indexes ERIC documents and other resources to provide readers with organized and readily usable searches of the literature. Other publications include presentations by nationally recognized experts in the field on topics of major concern, such as *An Experimentalist Approach to Counseling*, and materials on topics directed toward practitioner needs, such as the *Behavior Modification Handbook for Helping Professionals*. In addition, publications have included information on accountability in the profession, strategies for system development, information on hiring practices (type of personnel and appropriate roles), and evaluation procedures for professionals and paraprofessionals. The concern for assisting persons to implement, adopt, and adapt new approaches and practices has led to the production of a new monograph series designed to provide users with the knowledge and skills necessary for successful implementation of these new approaches. These publications will be available early in 1976.

In the future, ERIC/CAPS will continue to maintain and develop a network to identify emerging needs and concerns of practitioners, educators, and researchers in helping professions. This "early warning system" is useful for determining the direction of research in order to develop and produce materials and resources which go beyond the scholarly or informative to be directly usable and useful.

Note: The reader is referred to the section on Education and Work: Career Counseling for additional products on guidance and counseling.

AN EXPERIMENTALIST APPROACH TO COUNSELING

A discussion on the role of the counselor in contemporary society

This monograph is a 62-page program that attempts to project the role of the counselor in contemporary society from the basic philosophical themes of John Dewey. Usually, the more philosophical or theoretical documents are thought to be of more interest to researchers than to counselors in the field. However, any technique employed by a counselor must be grounded in a systematic theory or philosophy. Therefore, counseling theory is not only relevant to a counselor's work, but it also becomes a very personal matter by providing counselors with a foundation on which their styles of interaction with clients and coworkers are based.

This monograph is intended to stimulate discussion and thinking by counselors in the field with regard to their own theories of counseling.

SUBJECT AREA(S)

Part 1 deals with three basic themes of John Dewey's philosophy: The nature of man, the method of intelligence, and the democratic ideal. Part 2 is a discussion of the counselor roles which stem from Dewey's treatment of these themes, including the counselor as social investigator, the counselor as social educator, and the counselor as social reformer.

INTENDED USERS AND BENEFICIARIES

Although this monograph would be of interest to researchers and counselor educators, it is intended primarily for practicing counselors.

GOAL(S) OR PURPOSE(S)

The purposes of this monograph are: (1) To stimulate thought and discussion of counseling theory and philosophy by counselors in the field, (2) to assist counselors in strengthening and clarifying their own philosophies, and (3) to help clear the way for input from the "grassroots" level into higher level thinking and policy planning regarding the role of the counselor in contemporary society.

MATERIALS AND EQUIPMENT

Plastic bound, hard copy is available from ERIC/CAPS for $3.30. ERIC Document Reproduction Service (EDRS) microfiche copy costs $0.75 plus $0.18 postage. EDRS paper copy costs $3.15 plus $0.26 postage.

ASSURANCES AND CLAIMS

An Experimentalist Approach to Counseling does not perpetuate sexism, racism, or other biases such as those related to religion, age, and socioeconomic stereotypes.

BEHAVIOR MODIFICATION HANDBOOK FOR HELPING PROFESSIONALS

A handbook of behavioral techniques useful to counselors

This monograph will be a practical "how-to" handbook describing various behavioral techniques that will be useful to counselors in working with their clients. Social professionals have communicated a high interest in obtaining such a focused publication that would bring together in concise form such procedures for using behavioral techniques effectively.

SUBJECT AREA(S)

This document will focus on specific behavioral counseling techniques that can be useful to counselors.

INTENDED USERS AND BENEFICIARIES

Intended users are counselors, counselor educators, and related professionals.

GOAL(S) OR PURPOSE(S)

The goal of this monograph is to assemble useful, practical, and proven behavior-modification techniques in handbook form to be utilized by professionals in their work.

MATERIALS AND EQUIPMENT

The price of this product has not yet been determined.

ASSURANCES AND CLAIMS

This document will not perpetuate sexism, racism, or other biases such as those related to religion, age, or socioeconomic stereotypes.

COUNSELING OLDER PERSONS: CAREERS, RETIREMENT, DYING

A paper to help counselors work with the aging

This manuscript is intended to be helpful to counselors working with clients of advanced age. Because death, dying, and aging are being brought more into focus with the advancing age of our population, these topics have come to the forefront in national counselor concerns. In addition, research has noted that these topics are the subject of a growing number of college courses. The ever-increasing number of early retirees is forcing counselors and persons in the social services to acquire skills and knowledge in the field. The manuscript was developed as a result of these factors, as well as the expression of high interest which was indicated in previous workshops conducted by ERIC/CAPS.

SUBJECT AREA(S)

This paper covers the rationale for selection of the topic; special considerations having to do with career counseling, client characteristics, and employer practices; counseling emphases, such as overcoming client diffidence, utilizing work skills and interests, developing new work skills and interests, and anticipating employer objections; retirement counseling, including attitudes and role adjustments, counseling emphases, the need for planning; dying and death, with special attention to terminal medical conditions, self-destructive behavior, and bereavement; and portents for the future.

INTENDED USERS AND BENEFICIARIES

This monograph is intended for professionals in the social services who propose to assist, or are assisting, persons to make career changes, to plan and adjust to retirement, or to deal with death and dying.

GOAL(S) OR PURPOSE(S)

The goals are to bolster counselors' general knowledgeableness in this area and to delineate actual counseling techniques that have been proven to be effective with this age group.

MATERIALS AND EQUIPMENT

Monograph price has not yet been determined.

ASSURANCES AND CLAIMS

This monograph will not perpetuate sexism, racism, or other biases such as those related to religion, age, or socioeconomic stereotypes.

DEVELOPING STUDENTS' POTENTIALS

A publication for helping professionals to develop student potentials

The greatest drain on the economy has been the ineffective utilization of resources. A major resource, too often neglected, is the human resource. Corporations, governmental agencies, and educational institutions have all witnessed the problem of helping their constituents to develop their full potential. The literature fails to provide comprehensive information and insights into programs that have been used to deal effectively with this problem. This publication focuses directly on the problem by providing the reader with three specific training programs that have been conducted in a number of different settings. Research concerning each program is provided, along with additional references for the interested reader. It is intended that this publication be helpful to the professional interested in developing students' potentials.

SUBJECT AREA(S)

Subject areas include achievement motivation, human potential groups, and eliminating self-defeating behaviors.

INTENDED USERS AND BENEFICIARIES

This publication is intended for school and college counselors, counselor educators and supervisors, school psychologists, counseling psychologists, directors of pupil and student personnel programs, and related professions.

GOAL(S) OR PURPOSE(S)

The purpose of this publication is to assist users in planning programs aimed at developing the potentials of students and other clientele.

MATERIALS AND EQUIPMENT

Publisher's cost is $5. ERIC microfiche cost is $0.75 plus $0.18 postage.

ASSURANCES AND CLAIMS

Developing Students' Potentials does not perpetuate sexism, racism, or other biases such as those related to religion, age, or socioeconomic stereotypes.

AN ACCOUNTABILITY MODEL FOR COUNSELORS: ERIC/TM REPORT 27

A paper describing accountability in counseling

A sound counselor accountability system would collate counselor accomplishments with costs. An accountability system would enable counselors to obtain feedback on the results of their work, select counseling methods on the basis of demonstrated success, identify students with unmet needs, devise shortcuts for routine operations, and argue for increased staffing to reach attainable goals. Better decisions could then be made about effective methods, staffing, student needs, and training. The system would define the domain of counselor responsibilities, use student behavior changes as evidence of counselor accomplishments, State counselor activities as costs, promote self-improvement, permit reports of failures and unknown outcomes, be designed by users, and be subject to revision. An illustrative accountability report shows how the cost, but not the value, of an outcome can be estimated. Experimentation is needed in order to answer the practical implementation problems of the system.

SUBJECT AREA(S)

The subject areas are counseling and accountability; specifically, the development of an accountability system for counselors.

INTENDED USERS AND BENEFICIARIES

This paper is written for counselors, school administrators, and others concerned with evaluating the effectiveness of counseling activities. The primary beneficiaries are counselors and school administrators who are interested in investigating the possibilities of implementing an accountability system for counseling and guidance activities.

GOAL(S) OR PURPOSE(S)

The purpose of this product is to describe accountability in counseling—what it is, how it can be done, and the advantages and disadvantages of such a system. It is also designed to allay the apprehension of counselors toward accountability in counseling.

ASSURANCES AND CLAIMS

The initial manuscript for this paper was submitted to a number of experts in counseling and program evaluation. The author incorporated these comments and suggestions into a second draft which was reviewed in a similar manner. This second draft submitted for evaluation and critical review by a review panel of the *Personnel and Guidance Journal*. The final draft of this paper reflects their criticism.

GUIDANCE AND COUNSELING

RD 150 006

NEW DESIGNS AND METHODS FOR DELIVERING HUMAN DEVELOPMENTAL SERVICE

A resource document for those who are planning to initiate or update their own program

The accent today is on accountability—whether program design responds to expressed need, which specific behaviors participants in a program may be expected to exhibit, how programs and people are to be evaluated, and how one trains staff to adopt and utilize new techniques and procedures. Scattered information exists in each of these areas, but this publication would be expected to bring all the information together in a usable form. It will be a "how-to" document from the standpoint of providing techniques and examples of needs-assessment strategies and procedures for training staff. It will also give an overview of existing competency-based pupil personnel services program, thus becoming a resource for those planning to initiate or update their own program.

SUBJECT AREA(S)

This document will cover needs-assessment strategies for guidance programs and staff development and training, and descriptions of competency-based guidance and pupil personnel services programs.

INTENDED USERS AND BENEFICIARIES

The primary users of this monograph will be counselors, student personnel workers, counselor educators, school administrators, teachers, and persons responsible for preservice and inservice training of school staff.

GOAL(S) OR PURPOSE(S)

The goals are to acquaint readers with exemplary competency-based guidance and pupil personnel services programs and to provide the reader with skills and know-how (including needs-assessment strategies and staff development and training techniques) to develop or upgrade their own guidance programs.

MATERIALS AND EQUIPMENT

The price of this product has not yet been determined.

ASSURANCES AND CLAIMS

This document will not perpetuate sexism, racism, or other biases such as those related to religion, age, or socioeconomic stereotypes.

PARAPROFESSIONALS IN HUMAN SERVICES

A monograph dealing with the use of paraprofessionals in educational and mental health settings

This is a 121-page monograph that deals with the use of paraprofessional workers in educational and mental health settings. The increasing use of paraprofessionals, and the hopes and conflicts that use precipitates, has created the need for a systematic examination of such use and its potential effects.

This monograph examines several positions regarding the use of paraprofessional help but takes no position itself. Rather, it was prepared to help counselors determine for themselves the impact of paraprofessionals on counselors' roles, as well as on the clientele they serve, by informing the reader of important issues and problems as they have been identified through research and existing practices.

SUBJECT AREA(S)

Topics covered by this monograph include: Historical and legislative developments; teacher aides; the role of the paraprofessional vis-a-vis that of the professional; paraprofessionals in mental health and pupil personnel services; guidelines for using paraprofessionals including selection, training, supervision, evaluation, and problems and dangers; and descriptions of programs using paraprofessionals.

INTENDED USERS AND BENEFICIARIES

While this monograph should be of general interest to counselors and related professionals, it is especially intended for those involved with programs using paraprofessionals, including counselors and paraprofessionals themselves; program directors, and those charged with program design and implementation, training of professional and paraprofessional workers, and program evaluation.

GOAL(S) OR PURPOSE(S)

The goals of this monograph are: (1) To help counselors determine for themselves the impact of paraprofessionals on their own roles and on their clientele, (2) to assist program developers in setting up guidelines for the use of paraprofessionals, and (3) to provide examples of how paraprofessionals have actually been used in a wide variety of settings.

MATERIALS AND EQUIPMENT

Hard, plastic bound copies from ERIC/CAPS cost $3. Microfiche copies from ERIC Document Reproduction Service (EDRS) cost $0.75 plus $0.18 postage. EDRS hard copy costs $5.40 plus $0.26 postage.

ASSURANCES AND CLAIMS

The monograph does not perpetuate sexism, racism, or other biases such as those related to religion, age, or socioeconomic stereotypes.

PARENT EDUCATION AND ELEMENTARY COUNSELING

A description of several model programs in parent counseling

Elementary counselors are feeling an increasing need to work with parents to influence their children's development. Strong parent education and counseling models are being sought by the elementary counselor group nationally; the need for such a search is supported by elementary counselors, principals, and teachers. All of these groups have indicated their desire to initiate such programs and feel there is a need for a guide which would share parent education and counseling practices which others have developed that would help them design their own programs. This monograph is intended to fulfill this need. It is also felt that this monograph will provide needed support to the current trend toward increased parent involvement in the elementary education process.

SUBJECT AREA(S)

This monograph contains descriptions of several model programs in parent counseling. These descriptions are accompanied by sample booklists, outlines, letters, and handouts that have been used in these programs.

INTENDED USERS AND BENEFICIARIES

This monograph is intended for elementary school counselors, teachers, and principals who are interested in developing parent education programs.

GOAL(S) OR PURPOSE(S)

The purposes of this monograph are: (1) To provide the elementary counselor and others who might be involved with parent education with basic information about several models of parent training and (2) to examine in depth some practical considerations which will be of assistance to counselors working in the field.

MATERIALS AND EQUIPMENT

The price of this product has not yet been determined.

ASSURANCES AND CLAIMS

WHAT'S HAPPENING IN COUNSELING IN U.S. FEDERAL PRISONS

An overview of the current status of counseling in the Federal and State prison systems

This monograph will cover the current status of counseling in Federal and State prisons, providing an overview of the situation as it exists today. In addition, it will speak to the techniques that are effective with juveniles, adults, women, blacks, and other groups within the larger groups of offenders. Very little literature exists regarding the situation within prisons at the present time, and little research is available concerning techniques and programs which are proving to be effective. This monograph will attempt to respond to this existing knowledge gap.

SUBJECT AREA(S)

This paper will cover the current state of counseling in penitentiaries, new approaches to assisting offenders to acquire greater awareness of their strengths and potentials, and approaches that are effective with various groups of offenders.

INTENDED USERS AND BENEFICIARIES

This monograph is intended for counselors (especially prison counselors), parole officers, community and agency planners, and related professionals.

GOAL(S) OR PURPOSE(S)

The goal of this monograph is to provide practical help to counselors and other professionals in the areas of general information and specific strategies and techniques that are useful in working with prison inmates.

MATERIALS AND EQUIPMENT

The price of this product has not yet been determined.

ASSURANCES AND CLAIMS

This document will not perpetuate sexism, racism, or other biases such as those related to religion, age, or socioeconomic stereotypes.

IMPACT MAGAZINE

A bimonthly magazine promoting change and innovation in counseling and related professions

Impact is a magazine for change and innovation in counseling and related professions. Volume I (published 1971-72) consists of four issues, Volume II (1973-74) consists of six issues, and Volume III (1974-75) consists of six issues. Each issue focuses on a particular area of current interest to helping professionals and contains results of relevant research; descriptions of exemplary programs; a listing of current books, journals, and other resources of potential use to helping professionals; and full-length articles dealing with theories, programs, practices, and the state of the art.

This blend of information on theory, research, and practice is a response to the need for counselor awareness of and involvement in the latest developments relating to the helping professions. Reader input into *Impact* is encouraged and exposure is given to a wide variety of exemplary programs and practices in order to demonstrate how the fruits of theory and research can be operationalized in everyday practice. This approach is intended to stimulate more research and innovation by counselors in the field.

SUBJECT AREA(S)

The major subject areas covered by each issue of *Impact Magazine* are as follows:

Volume I, No. 1—Career guidance

Volume I, No. 2—Higher education, pupil personnel services, sex role attitudes, and counselor employment

Volume I, No. 3—Planning and implementing educational change

Volume I, No. 4—Drug education, achievement motivation, and "parenting"

Volume II, No. 1—Human development

Volume II, No. 2—Career guidance

Volume II, No. 3—Accountability in guidance

Volume II, Nos. 4 and 5—(One double issue) Sex therapy, roles, education, and homosexuality

Volume II, No. 6—Adolescence

Volume III, No. 1—Futuristics

Volume III, No. 2—Examining models, techniques, and programs in guidance

Volume III, Nos. 3 and 4—(One double issue) Career development

Volume III, No. 5—Paraprofessionals in the helping services

Volume III, No. 6—Counseling and the quality of life (to include articles on death and dying, counseling unmarried mothers, identity transformation in unmarried women, vocational counseling, a Delphi study of the future of the family, and college counseling programs for divorced or separated students).

INTENDED USERS AND BENEFICIARIES

Impact Magazine is intended for members of the helping professions. Specifically, this includes school counselors, counselor supervisors, counselor educators, school psychologists, teachers, and administrators. Although the usual emphasis is on counseling in educational settings, the magazine has some relevance to counseling psychologists and counselors in State and community agencies.

GOAL(S) OR PURPOSE(S)

The magazine is designed to keep counselors on the forefront of current developments in their profession. The ultimate goal is not only to inform, but also to stimulate, reader reaction to current trends and needs in counseling in the form of research and innovation at the "grassroots" level. The magazine addresses itself to high-priority topics, such as career education and sex role expectations, in order to sensitize readers to issues of national concern and explore ways in which counselors can respond to these concerns.

PATTERNS OF USE

The magazine is intended to be used as a practical guide and resource by counselors and related professionals.

MATERIALS AND EQUIPMENT

Subscriptions to current volumes of *Impact Magazine* cost $9 per volume. Individual issues from current volumes cost $1.50 for single issues and $3 for double issues. Individual issues from past volumes cost $1 for single issues and $2 for double issues.

ERIC microfiche copies are also available for $0.76, plus mailing.

ASSURANCES AND CLAIMS

The magazine frequently reprints statements that represent provocative, if not extreme, views as a means of sensitizing readers to important issues or developments that are relevant to the work of those with helping responsibilities. Occasionally, these statements may seem to contain political references or to have political connotations. It should be emphasized that neither by design nor intent does the magazine take stands on political issues or questions, or evaluate political figures. The basis for inclusion of items is determined solely upon the utility of the information for the performance of professional responsibilities and activities, and any attempt to draw inferences regarding political views is inappropriate and unwarranted.

Also, the magazine does not print any articles or statements that would perpetuate any social biases, including biases with regard to color, nationality, religion, sex, or personal belief.

SEARCHLIGHT

Sixteen annotated bibliographies on subject areas of importance to counselors

Searchlight consists of 16 annotated bibliographies. Each bibliography is derived from a computer search of the ERIC publications *Resources* (formerly *Research*) *in Education* (RIE) and *Current Index to Journals in Education* (CIJE), as well as *Dissertation Abstracts International*. Each *Searchlight* contains approximately 75-100 entries; and each entry includes title, author(s), length (in pages), availability, ERIC descriptors, and an annotation or abstract.

Searchlight is designed to provide counselors with convenient, low-cost packages of pertinent resources from the ERIC data base. All documents or journal articles cited are screened to insure their relevancy to the subject area covered by the issue in which they appear.

SUBJECT AREA(S)

Subject areas are school discipline and student rights, counseling the pregnant teenager, articulation, counseling for drug abuse, counseling for achievement motivation, improving counselors' public image, program evaluation and accountability, parent counseling, confidentiality, students as resources, counseling the aging, vocational counseling of disadvantaged students, support personnel, tests and testing programs, outreach counseling, and group guidance.

INTENDED USERS AND BENEFICIARIES

These bibliographies will be useful to counselors, counselor supervisors, counselor educators, and other pupil personnel workers. Counselors of college students and adults would also benefit from this series.

GOAL(S) OR PURPOSE(S)

This program provides counselors and other social professionals with convenient, low-cost bibliographies that cite resources which can be used: (1) To gather background information needed for program planning, design, implementation, and evaluation; (2) to assist counselors in the use of special instruments (such as standardized tests) or techniques (such as group counseling); (3) to help counselors recognize and respond to the needs of special populations; and (4) to sensitize counselors to issues of importance to their profession (such as confidentiality, the use of support personnel).

PATTERNS OF USE

Each *Searchlight* is a self-contained bibliography that may be used independently of the rest of the series. Each contains directions on how to obtain documents cited and an order form for ERIC microfiche copies.

MATERIALS AND EQUIPMENT

Searchlight, printed in September 1973, cost $1 each. Updated *Searchlight* (to be available by December 1975) will cost $1.50 each.

ASSURANCES AND CLAIMS

Only documents from the ERIC data base are included in *Searchlight*. Packages are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such material in the package causes an appropriately directed review of the materials. The materials are revised to eliminate such shortcomings.

Washington, D.C.

History as prelude

One essential condition for continued, systematic improvement of education is for educators to acquire current, reliable information about effective practices and the results of research and development. This has been recognized by Congress for over a century, for the act establishing the Office of Education specified that one of the responsibilities of the new agency was ". . . diffusing such information respecting the organization and management of schools and school systems as shall aid the people of the United States in the establishment and maintenance of effective school systems and otherwise promote the cause of education throughout the country."

It was not until 1958, however, with the passage of the National Defense Education Act, that an explicit dissemination mandate was included in an authorization to support research and development. This mandate was incorporated in Title VII of that Act, authorizing the support of research and dissemination of information about such new and promising educational media as motion pictures, radio, and television. The title VII authorization resulted in the expenditure of millions of dollars for dissemination activities from 1958 through 1966. Thereafter, every new educational research authorization passed by Congress contained language encouraging the dissemination of the results of the research to be supported.

Perhaps the most significant of these expenditures was for a series of design and feasibility studies addressing the need for a research information service in the area of new educational media. Coupled with related work supported under the Cooperative Research Act, the result was the establishment in 1965 of the Educational Resources Information Center (ERIC), now the largest single educational information system in the world.

Yet despite the size of ERIC and the extensiveness of its use in education, it soon became apparent that mere access to documents about education was insufficient to facilitate continuous educational improvement. As a result, a variety of other types of dissemination activities were initiated. In 1965, under the provisions of the Vocational Education Act, the first of what was to become a national network of Research Coordinating Units was established in a State education agency. Although these units were intended to foster improved research about vocational education, they soon came to be a major dissemination link between the vocational educators of a State and the national knowledge base of results of research, development, and exemplary practice. Still another significant specialized dissemination service launched in the 1960's was a national network of instructional material centers to serve teachers of the handicapped.

During the same period, increasing emphasis was placed upon the interpretation and synthesis of the results of research and effective practice in order to provide educational practitioners with improved decisionmaking tools. At first, these efforts were carried on mainly in the ERIC clearinghouses; but beginning in 1967, grants and contracts were awarded to other applicants to provide interpretive materials on such subjects as: Remedial reading, bilingual education, and the year-round school. When this program was operating at full scale in the late sixties and early seventies, it resulted in a monthly publication called Putting Research Into Educational Practice (PREP).

In 1970 the initiation of a 3-year field experiment, the Pilot State Dissemination Program, demonstrated the importance of professional linking agents in assisting educators to acquire and use information in addressing educational problems. The experience of this program has since influenced most of the significant dissemination initiatives of the Federal Government. Among the offspring of the Pilot State Dissemination Program are the title III, ESEA facilitator network and the State Capacity Building Program of the National Institute of Education.

A broader concept

Throughout this historical period, dissemination in education was usually characterized as a process of spreading information about current practices, innovations, research and development products, and the like. Outcomes of this process were identified as awareness, knowledge, and evaluation activities that lead to decisions to adopt new practices. It was assumed that these decisions resulted in implementation and utilization activities that, in turn, solved problems and improved education.

This assumption and the role of dissemination in the educational change process are now being questioned. Policy statements, concept papers, research and development activities, and dissemination practice in recent years signal the recognition of the need for a broader definition. Local conditions and incentives for change, problems of implementation, need for technical assistance, requirements for local adaptation, and participation in the design of innovations have all become issues for those concerned with dissemination. As a result, *dissemination* is being more broadly redefined, or the word *utilization* or *implementation* is added to reflect a wider conception. This expanded definition of dissemination, or the concept of dissemination *and* utilization, encompasses the whole process of change in education particularly as viewed by those who wish to manage or influence the course of the change.

Dr. C. Larry Hutchins is the Chief, School Practice and Service Division, and Mr. Thomas D. Clemens is the Chief, Information and Communications Systems Division in the Dissemination and Resources Group of the National Institute of Education, Washington, D.C.

INFORMATION UTILIZATION AND DISSEMINATION

Trends

Trends in the field reflect this broader definition. Dissemination and utilization activities undertaken by State and intermediate service agencies are expanding to include attention to implementation and utilization activities, and R & D producers are adding technical assistance to the development and information services previously provided. Local education agencies are increasingly concerned with their own local problem-solving capability. Training programs for those trying to help local schools are moving away from their previous focus on skills related solely to the dissemination of information to those needed for change support. Research, development, and evaluation efforts are increasingly focused on what happens to an innovation after it is adopted. Finally, sponsors of change efforts at the Federal and State levels have demonstrated their awareness of the inadequacy of dissemination programs focused only on the spread of information about innovations and have pronounced the implementation/utilization component as critical to the total process.

Future R & D

New research and development will undoubtedly reinforce these trends. Work in a variety of areas is warranted. Undoubtedly, for example, efforts will continue to identify dissemination variables that influence the change process. A more urgent and difficult problem faces researchers in the discovery of how those variables already identified interact. For example, given knowledge (information) as a necessary condition of change, how much and what kind of information is needed at selected stages of change? Given the importance that previous research has placed on the role of personal, peer level communication in the change process, what are the most critical times for this type of information? What are the trade-offs between printed and audiovisual information? Given the need for linkage between resources and users, what forms of linkage are most successful under different constraints? These are but a few of the operational questions in need of further examination. It is possible that more fundamental, basic research on how people solve problems is also needed; but, given the severe institutional, legal, and fiscal constraints on the strategies available to help schools, it appears that field-oriented studies that examine multiple factors in the change process are likely to be most useful in the immediate future.

NIE products

The products identified in the Information Utilization and Dissemination section of the *Catalog* are but a few of those described elsewhere in the *Catalog* which are relevant to dissemination and utilization. For example, readers should also examine those products listed in the Finance, Productivity, and Management section, a number of which deal with organizational development issues that include a concern for information and the use of external resource systems. Others deal with interpersonal communication and staff development in ways that would be useful to those involved in dissemination. Other sections also contain descriptions of information products specifically focused on the topic area of the section.

In this section are information resources that are so general—such as the *ALERT, A Sourcebook of Elementary Curricula, Programs and Projects*—that they fit in no one particular subject area category or are specific to topics that have no separate section of their own—such as the *1974 Directory of Resources in Adult Education* and *Options and Perspectives: A Sourcebook of Innovative Foreign Language Programs in Action, K-12.* A number of the products included here describe information systems (e.g., *ERIC: What It Is, How To Use It; Community Use of the ERIC System; The Evaluation of Educational Information Centers).*

The bulk of products included, however, are training programs for dissemination and utilization personnel such as the 10-unit program of training for *Leadership in Local Educational Improvement Programs* or the *Educational Information Consultant (EIC) Training Program.* These products should be of unique interest to those involved in programs directed at linkages between other R & D products and school users. Also included are studies or reviews of how the change process is managed *(Diffusion Strategy Guide; Promoting Change in Schools, A Diffusion Casebook; Change Strategies and Techniques for the Helper;* and *Behavior of Innovative Personnel).*

Almost all of the products described in this section are for use by those who work in or with schools—administrators, information specialists, etc. Only one product, *The Library and Reference Skills Curriculum,* is oriented to students in grades 3 through 6. It should be examined in the context of some of the basic skills products, particularly those on reasoning, problem solving, or reading and language arts.

RD 160 001

ANALYZING AND IMPROVING THE IMPLEMENTATION OF A LOCAL EDUCATION PROGRAM (COMPONENT OF A 10-UNIT PROGRAM OF TRAINING FOR LEADERSHIP IN LOCAL EDUCATIONAL IMPROVEMENT PROGRAMS)

A self-instructional training unit
providing a problem-solving model on improving
the implementation of a local educational
program

Analyzing and Improving the Implementation of a Local Education Program is a training product designed to help school district leaders or consultants to school districts plan and conduct changes that will improve the effectiveness of implementation of any program being conducted in the district.

The product employs a problem-solving model consisting of five steps: Identifying features of the program being implemented, assessing the extent of present implementation of the features, conducting an analysis of likely causes for shortcomings in implementation, surveying resources that could be put to work in improving program implementation, and designing a plan for strengthening implementation. Several illustrative local programs are described and are the basis for student exercises.

The product is designed for study separately or together with any desired combination of other units of the training program. It is usable on a wholly self-instructional basis or with the direction of an instructor. An instructor's guide is provided for use with any of the program units. It is recommended that the student use unit 1 of the program, Training Program Introduction and General Study Plan Guide, as one basis for selecting this product for study.

SUBJECT AREA(S)

Leadership in local educational change is the subject area.

This product is based on the recognition that the failures of school programs to accomplish intended outcomes very often reflect not faults in the program designs, but failures to achieve effective implementation. This is the case with both traditional and innovative programs. The product provides the educational leader with a procedure for identifying shortcomings of program implementation and for planning improvements in implementation.

INTENDED USERS AND BENEFICIARIES

This product is designed for use by anyone in education who offers full-time or part-time leadership in local educational improvement programs. Within school districts, this applies to associate or assistant superintendents for instruction, curriculum specialists, building principals, and teachers who are members of project teams. The product is suitable for use by field personnel of State education departments, regional educational laboratories, or private educational consulting firms in their work with school districts. It is appropriate for use in graduate course work in administration or supervision.

GOAL(S) OR PURPOSE(S)

The goal of the product is to enable local educational agencies to do a more effective job of improving the implementation of ongoing programs, whether in curriculum, organization for instruction, school climate, school/community relations, or any other aspect of a school system.

PATTERNS OF USE

The product is a self-contained unit and is designed to be fully self-instructional. The student can restrict study to this 1 unit of the training program or can study any combination of the remaining units of the 10-unit program. The product can also be studied under the direction of an instructor in a course or workshop.

It is recommended that the student use unit 1, Training Program Introduction and General Study Plan Guide, in deciding to study this and other program units. Also, the instructor can decide for the student that this product should be studied.

In studying the product, the student first takes the preassessment exercise to measure initial mastery of any unit objectives. On this basis, the decision is made as to which product objectives require review only and which require careful study. Following completion of the product, the student takes the postassessment exercise to determine whether mastery has been achieved or whether further study is needed.

ASSESSMENT PROVISIONS

Preassessment and postassessment exercises, with answer keys, give bases for planning study of the product and for assessing terminal mastery. Throughout study of the product, the student uses the answer keys to exercises in checking progress.

TIME REQUIREMENTS

Time required to complete the product varies between 6 and 8 hours, depending on how intensively the student needs to work on product objectives.

IMPLEMENTATION PROCEDURES

Although this product can be studied on a self-instructional basis, it is usually expected that the product will be used in course work or an inservice workshop under an instructor.

Summary Cost Information

All cost figures given are estimates. It is recommended that the student also purchase unit 1 of the program of which this is a component, Training Program Introduction and General Study Plan Guide, at a cost of $3. Therefore, for each student using this product in connection with unit 1 of the training program, the cost would be $8. Unit 1 is usable in planning study of any of units 2-10 of the training program, so the cost of this would not need to be duplicated if the student used additional units of the program. The cost per instructor would be $2 for the instructor's guide, $3 for unit 1, and $5 for *Analyzing and Improving the Implementation of Local Education Program* (which is unit 9 of the training program).

Personnel Required for Product Adoption and Implementation

In view of the self-instructional quality of the product, no instructional personnel are required. It is recommended, however, that there be an instructor to help students select the product for study, to assist them while studying the product, and to help evaluate mastery of product objectives.

ASSURANCES AND CLAIMS

The product is neutral with respect to any harmful or social biasing effects since it deals with leadership for improving local educational programs of any kind. All illustrative instructional programs described in the product involve innovations in instruction intended to improve individualization or to teach students to set their own goals and learn effective ways of achieving them. In user situations, no report having to do with any harmful or biasing effects of the product has been received.

Transportability of the product and its use independently of the producer are provided for in the design (fully self-instructional). In case the product is used with direction from an instructor, an instructor's guide is provided giving specific procedures the instructor may elect to follow in guiding students' work.

DIFFUSING EDUCATIONAL IMPROVEMENT PROGRAMS WITHIN A SCHOOL DISTRICT (COMPONENT OF 10-UNIT PROGRAM OF TRAINING FOR LEADERSHIP IN LOCAL EDUCATIONAL IMPROVEMENT PROGRAMS)

A training product presenting theory and strategies for spreading the adoption of an innovative program within a school district

Diffusing Educational Improvement Programs Within a School District is a training product offering anyone with a specialty of leadership in local educational change programs a conceptual basis for planning to meet systemwide needs through improvement programs reaching into all parts of the system rather than being confined to a pilot level. The product is appropriate for study by school-system leaders or by field personnel of State education departments and consultants to school districts from any external educational agency.

The product identifies types of needs for improvement that are apt to be districtwide, considers reasons why successful pilot programs often fail to spread throughout the district, and examines and compares different strategies designed to yield districtwide improvement programs.

The product consists of a volume divided into 11 sections, each covering 1 objective. Exercises, several of which are based on descriptions of actual improvement programs, provide practice in applying the principles presented in the textual material. Answer keys are provided for the exercises. Preassessment and postassessment exercises with answer keys are included.

The product is designed to be studied separately or together with other selected units of the training program. It is usable on a self-instructional basis or under an instructor's guidance. An instructor's guide is provided for use with any of the program units. It is recommended that the student use unit 1 of the program, *Training Program Introduction and General Study Plan Guide*, as one basis for selecting this product for study.

SUBJECT AREA(S)

Leadership in local educational change.

The product contributes to the designated knowledge and planning skills in offering leadership for achieving districtwide implementation of educational improvement programs. It gives particular attention to pilot test approaches to change, initial systemwide strategies for change, change programs where the same theme (e.g., individualizing instruction) is implemented systemwide, but with school-to-school variations, and change programs involving homemade products.

INTENDED USERS AND BENEFICIARIES

This component is intended for use by school-system leaders with responsibilities for planning and conducting local improvement programs, and for field consultants from State education departments, educational laboratories, or educational consulting firms. It is especially designed for anyone whose leadership specialty concerns planning to meet systemwide needs, including teachers who are members of change-project teams.

GOAL(S) OR PURPOSE(S)

The major purpose is to enable local agencies to plan more effectively for diffusion of any innovative educational program on a districtwide basis whenever appropriate.

PATTERNS OF USE

This product is a self-contained unit designed to be fully self-instructional. The student can restrict study to this one unit of the training program or can study any combination of the remaining nine program units. The product can also be studied under the direction of an instructor in a course or workshop.

It is recommended that the student use unit 1, *Training Program Introduction and General Study Plan Guide* in determining whether to study this and other program units. Also, the instructor can decide whether this product should be studied by the student.

Before studying the unit, the student takes a preassessment exercise to measure initial mastery of any unit objectives. On the basis of the preassessment results, the decision is made regarding which unit objectives require more intensive study. Following completion of the unit, the student takes the postassessment exercise to determine whether mastery of the objectives has been achieved or whether further study is required.

ASSESSMENT PROVISIONS

Preassessment and postassessment exercises, with answer keys, give bases for planning study of the product and for assessing terminal mastery. Throughout study of the product, the student uses the answer keys to exercises in checking progress.

RD 160 002

TIME REQUIREMENTS

Time required to complete the product varies between 4 and 8 hours, depending on how intensively the student needs to work on product objectives.

IMPLEMENTATION PROCEDURES

Since the product can be studied on a fully self-instructional basis, the student can use it without instructional help. Normally, it is expected that the product will be used in course work or in an inservice workshop under an instructor.

Summary Cost Information

All cost figures given are estimates. It is recommended that the student also purchase unit 1 of the program, *Training Program Introduction and General Study Plan Guide*, of which this is a component, at a cost of $3. Therefore, for each student using this product in connection with unit 1 of the training program, the cost would be $8. Unit 1 is usable in planning study of any of units 2-10 of the training program, so the cost of this would not need to be duplicated if the student used additional units of the program. The cost per instructor would be $2 for the instructor's guide, $3 for unit 1, and $5 for the present training product (which is unit 10 of the training program).

Personnel Required for Product Adoption and Implementation

In view of the self-instructional features of the product, no instructional personnel are required. However, it is recommended that there be an instructor to help students select the product for study, to assist them while studying the product, and to help evaluate mastery of product objectives.

ASSURANCES AND CLAIMS

This product is concerned with rational principles and procedures in offering leadership for any change program in local educational settings. This makes it neutral with respect to any form of harmful or social biasing effects.

Case descriptions included in the product have been carefully chosen to reflect a concern for meeting the needs of all categories of students through such means as providing for student choice of learning tasks, or an urban-suburban program providing spaces for urban black children in a suburban school system.

The product is designed to be fully self-contained and self-instructional; i.e., transportable and usable without assistance from the producer. If the product is used under an instructor's guidance, an instructor's guide is provided to offer specific recommendations and procedures for the product's use.

DIFFUSION STRATEGY GUIDE

A methodology for planning and managing the diffusion of innovations

This document presents a methodology for planning and managing the spread of educational innovations. It presents a diffusion paradigm which not only admits utilization of a consortium of State enforcement agencies as a disseminate mechanism through which research and development products may be diffused through established State enforcement agency channels, but also provides for a feedback mechanism through which the developers of research and development products can acquire both formative and summative evaluation data for educational practitioners. The guide is divided into two major divisions. The first division presents a theoretical framework of the concept, and the second division is devoted to a description of how to implement the methodology presented in the first division.

SUBJECT AREA(S)

The content of this document is exclusively concerned with the diffusion of the products of educational research and development.

INTENDED USERS AND BENEFICIARIES

The document is intended to contribute to the knowledge base of professionals engaged in diffusion of educational research and development products.

GOAL(S) OR PURPOSE(S)

The purpose of this document is to present a methodology for diffusing research and development products and to assure, through the strategies projected, that the educational practitioner will have ample opportunity to affect the design of educational research and development products and processes.

PATTERNS OF USE

This document is sequenced in such a manner that it presents a step-by-step methodology for the diffusion of research and development products. It also provides the theoretical basis of the projected activities.

ASSESSMENT PROVISIONS

No provisions have been made for assessing the effectiveness of the implementation of this document.

TIME REQUIREMENTS

No time requirements have been established for the implementation of this document.

IMPLEMENTATION PROCEDURES

No special equipment or facilities are required for implementation of the program; however, the assumption is made that those individuals implementing the guide will have had training and experience in the field of diffusion. The methodology set forth does require reorganization and redirection of established diffusion departments or mechanisms.

MATERIALS AND EQUIPMENT

No additional materials, equipment, or personnel are required for implementation.

ASSURANCES AND CLAIMS

The total methodology projected in the guide is supported only on a theoretical base. Many of the strategies and tactics proposed in this document have previously been implemented and found effective by the Appalachia Educational Laboratory (AEL) staff. As yet, the total process has not been implemented and tested.

DEVELOPER/AUTHOR:

Division of Diffusion
Appalachia Educational Laboratory, Inc.
P.O. Box 1348
Charleston, W. Va. 25325

AVAILABILITY

The *Diffusion Strategy Guide* was printed and disseminated to key people throughout the United States in November 1973. The first two printings of the document have been exhausted and copies are no longer available. However, the document is available through ERIC. There are currently no plans to revise or republish this document.

Order No. ED 090 919, $0.76 (microfiche), $5.70 (paper), add $0.34 (postage). Order from:
ERIC Document Reproduction Service
P.O. Box 190
Arlington, Va. 22210

THE EDUCATIONAL INFORMATION CONSULTANT (EIC) TRAINING PROGRAM

A team-learning program which explores methods of communicating research and development information to the education practitioner

The role of the Educational Information Consultant (EIC) is emerging in response to the need for information dissemination services in education. The EIC's role is to receive, process, and fulfill client requests for information needed to resolve specific curricular, instructional, and administrative problems. Various aspects of the EIC service have, in the past, been shared by a variety of professionals. It is becoming evident now, however, that there is an emerging need for a linkage agent—a person capable of standing between the research community and the educator, a person whose prime responsibility is to make research and development information available to the educator.

The instructional system in this training package has three qualities which, together, offer the student a learning experience quite different from the familiar ones. First, although the skills introduced relate directly to the emerging role of the EIC, they provide students with tools which can also be directly applied to their own research, retrieval, and utilization needs.

A second distinguishing quality is the opportunity the training provides for students to satisfy their own interests in a specific problem area. Each student takes another student's real information problem and attempts to resolve it while learning the processes composing the EIC role. This personal, student-to-student interaction in a real problem area typifies the idea of a server role, rather than the servee role frequently expected of students in the traditional instruction environment.

The training materials include checklists, concise "how-to-do-it" guidelines, and other job aids of proven utility for performing the EIC role. They are tools to do the job in the real world. The future reference value of these materials becomes apparent as they are presented, explained, and then applied during the training. The training program may be appropriately taken by educational personnel whose experience, interests, or work responsibilities may depend on a rich flow of timely, accessible educational information.

SUBJECT AREA(S)

Subject areas include communication, negotiating the educational problem, retrieval of information, transformation, and evaluation of outcomes.

INTENDED USERS AND BENEFICIARIES

Teachers, librarians, administrators, administrative aides, and others interested in obtaining new knowledge and materials are the intended users.

GOAL(S) OR PURPOSE(S)

The purpose of this package is: (1) To identify, define, and analyze an educational problem and attendant information need(s) of a client; (2) to develop a search strategy to locate, identify, and secure research and development information pertinent to the client's problem and request; (3) to screen, analyze, synthesize, and organize the results of the search into a form appropriate for delivery to the client; (4) to display and communicate the results of the search to the client in a style suitable for use in finding a solution to the problem; and (5) to assess the performance of the major EIC processes, overall role, and operational effectiveness of the setting within the linkage system, and then reformulate based on evaluation and adjustments made in processes and functions.

PATTERNS OF USE

Each one of the major processes is the focus of one unit, or module, of the training. In addition, there is an introduction module describing the emerging role and functional contexts of the EIC, and a simulation model providing an orientation to the skills involved in each process. The modules are introduced in a fixed sequence.

A learning-team form combines the concept of group dynamics with the already proven concept of independent study to create a unique, self-directed, small-team learning model. The basis for the learning-team form consists of self-instructional elements similar in content to those in the other two forms, but the directions are written to make the materials self-instructional. The schedule for this form calls for 10 team sessions and approximately 25 hours of individual activities. A team is composed of three to six persons.

ASSESSMENT PROVISIONS

Skills acquired are assessed by the instructor and by the student in a series of self-assessment exercises. An informational package, which is rated for congruence with a model package, is created and communicated by each student.

TIME REQUIREMENTS

The learning-team form requires approximately 60 hours, one-half of which is spent in individual study.

IMPLEMENTATION PROCEDURES

This package does not require a specialist teacher, although someone familiar with the Educational Resources Information Center (ERIC) will be much more effective. It is recommended that access to ERIC will greatly enhance the instructional experience. The instructor's manual contains complete and detailed lesson plans and assignments to make this package completely self-contained. The student's manual becomes a permanently useful reference and working measure.

Summary Cost Information

The cost of the learning-team form includes enrollment in a four-unit independent study course offered through the University of California Extension.

Personnel Required for Product Adoption and Implementation

Any instructor familiar with ERIC can implement this package.

ASSURANCES AND CLAIMS

Assurances

The information gathered from operational field tests of all 3 learning forms (course-4, institute-4, learning team-8) in 16 sites in 9 States indicates that the materials can stand alone in the hands of a competent instructor and can be successfully implemented without additional aid beyond that provided in the instructor's manual. The developers and publishers have not received any reports of harm associated with the use of this product.

The developer named the role "the EIC" to avoid any social bias or sexual stereotyping. All references are made to the "trainee," a "learner." There are no references to "he" or "she" in either student or instructor materials.

Claims

The accomplishment of almost every training objective is demonstrated by completion of a document or documents. The skills-oriented dimensions of the training prescribe that the learning exercises be actual operations which result in tangible trainee-produced products—an information package and "Paper Trail." In summary, 97 percent of the course and institute participants (N=144) completed the training and achieved basic skill level (2.0 on a 4-point scale) competence. Moreover, 74 percent of the course participants and 65 percent of the institute participants completed information packages that were rated at level 3.0 or 4.0, indicative of "Proficient" or "High Proficiency" levels of performance. Of the learning team participants who completed the training and submitted information packages (N=17), 89 percent completed packages that were rated at basic skill level, while 71 percent completed packages that were rated at the higher levels of proficiency. The raters were members of the staff of the developer agency trained for this particular task.

Careful attention to each stage of product development was given this training package. An adivsory committee was formed to establish the model of the EIC role and to define the functional elements to be included in it. A three-phase pilot testing occurred in the first development year, followed by extensive revision. Subsequently, the operational field testing established the effectiveness and transportability of the three learning forms.

The final report of the project in which this training was developed and validated is available.

RD 160 005

ENQUIRY AS AN EDUCATIONAL THEME (COMPONENT OF 10-UNIT PROGRAM OF TRAINING FOR LEADERSHIP IN LOCAL EDUCATIONAL IMPROVEMENT PROGRAMS)

A training program offering a model for inquiry and examining innovations in terms of the model

Enquiry as an Educational Theme, With Related Innovations is a training product for use by anyone taking leadership in planning or conducting local educational improvement programs. The product is suitable especially for those in education who wish to have a conceptual basis for examining curriculum and instruction in terms of teaching all students inquiry or problem-solving competencies in any subject area. Graduate students in curriculum, supervision, or administration should benefit from study of the product. Within school systems, associate or assistant superintendents for instruction, curriculum coordinators, and department chairpersons may find the product particularly valuable. Building principals and teachers also are likely to find the product useful. Field consultants from State education departments or other agencies concerned with school improvement may find the product useful in their work with school districts.

The product defines and justifies inquiry as a critical type of learning goal, then presents a general model of inquiry or problem solving. Various curriculums designed to teach inquiry are then examined in terms of the model, and a checklist is provided for assessing the extent to which instruction in a school teaches inquiry. Numerous readings on the rationale for inquiry are included, along with descriptions of a number of innovative inquiry-focused curriculums.

The product consists of a volume divided into seven sections corresponding to product objectives. Exercises are included, each supplied with a worksheet and an answer key. The product contains a preassessment and a postassessment exercise, each with an answer key. The product is designed to be studied on a self-instructional basis or with assistance from an instructor. An instructor's guide is provided for use with the total training program or any part of it. The student may study only this product or study it together with other selected units of the training program. It is recommended that the student use unit 1, "Training Program Introduction and General Study Plan Guide," as one basis for selecting this product for study.

SUBJECT AREA(S)

Leadership in local educational change.

The product contributes to the designated knowledge and skills in offering leadership for planning and conducting local educational improvement programs. It offers a rationale for inquiry-focused instruction to teach all students problem-solving competencies in acquiring and using knowledge in such areas as science and social studies. Through exercises, the student learns to employ the rationale in the examination of numerous inquiry-focused curriculums that are described in the product.

INTENDED USERS AND BENEFICIARIES

The product is intended for use by anyone in education who offers leadership in planning and conducting local change programs. It is particularly well suited for study by curriculum specialists in school districts or teachers who are involved in change projects calling for teaching inquiry. Other school district leaders—associate superintendents for instruction and building principals—and community representatives can also benefit from study of the product. Field consultants from State education departments or other agencies serving schools may find the product useful in their work. Graduate students in curriculum, supervision, or administration can also benefit from study of the product.

GOAL(S) OR PURPOSE(S)

The purpose of the product is to help local educational agencies improve curriculum and instruction in teaching all students methods of inquiry to be employed in acquiring and applying knowledge in various subject areas.

PATTERNS OF USE

This product is a self-contained unit designed to be fully self-instructional. The student can restrict study to this one unit of the training program, or can study any combination of the remaining nine program units. The product can be studied alone or under the direction of an instructor in a course or workshop.

It is recommended that the student use unit 1, "Training Program Introduction and General Study Plan Guide," in determining whether to study this and other program units.

RD 160 005

Also, the instructor can decide whether this product should be studied by the student.

Before studying the unit, the student takes a preassessment exercise to measure initial mastery of any unit objectives. On the basis of the preassessment results, the decision is made regarding which unit objectives require review or more intensive study. Following completion of the unit, the student takes the postassessment exercise to determine whether mastery of the objectives has been achieved or whether further study is required.

ASSESSMENT PROVISIONS

Preassessment and postassessment exercises, with answer keys, give bases for planning study of the product and for assessing terminal mastery. Throughout study of the product, the student uses the answer keys to exercises in checking progress.

TIME REQUIREMENTS

Time required to complete the product varies between 4 and 6 hours, depending on how intensively the student needs to work on product objectives.

IMPLEMENTATION PROCEDURES

Since the product can be studied on a fully self-instructional basis, the student can use it without instructional help. Normally, it is expected that the product will be used in course work or in an inservice workshop under an instructor.

The product has been used in various states of development in the following ways: As part of a training program offered field consultants of State education departments, as part of the training of doctoral students in curriculum and supervision, with field consultants of an educational laboratory, and with central administrators or building principals of school systems.

Summary Cost Information

All cost figures given are estimates. It is recommended that the student also purchase unit 1 of the program, "Training Program Introduction and General Study Plan Guide," of which this is a component, at a cost of $3. Therefore, for each student using this product in connection with unit 1 of the training program, the cost would be $9. Unit 1 is usable in planning study of any of units 2-10 of the training program, so the cost of this would not need to be duplicated if the student used additional units of the program. The cost per instructor would be $2 for the instructor's guide, $3 for unit 1, and $6 for the present training product (which is unit 5 of the training program).

Personnel Required for Product Adoption and Implementation

In view of the self-instructional features of the product, no instructional personnel are required. However, it is recommended that there be an instructor to help students select the product for study, to assist them while studying the product, and to help evaluate mastery of product objectives.

ASSURANCES AND CLAIMS

This product is concerned with principles and procedures in offering leadership for instructional change programs in local educational settings. This makes it essentially neutral with respect to any form of harmful or biasing effects. Expert critics of the product have not noted any features likely to produce such effects.

The product is designed to be fully self-contained and self-instructional; i.e., transportable and usable without assistance from the producer. If the product is used under an instructor's guidance, an instructor's guide is provided to offer specific recommendations and procedures for the product's use.

INDIVIDUALIZATION, MASTERY, AND STUDENT SELF-DIRECTION AS THEMES OF EDUCATIONAL REFORM, WITH RELATED INNOVATIONS (COMPONENT OF 10-UNIT PROGRAM OF TRAINING FOR LEADERSHIP IN LOCAL EDUCATIONAL IMPROVEMENT PROGRAMS)

A training product offering models for analysis of the three themes and examining innovations in terms of the model

Individualization, Mastery, and Student Self-Direction as Themes of Educational Reform, With Related Innovations is a training product dealing with three major, and closely related, themes of the present educational reform movement. It examines the extent to which various recent instructional innovations place these themes in operation. The product is designed for study by school system leaders with responsibility for planning and conducting change programs. It is also appropriate for field consultants from State education departments, graduate students in administration or supervision, and for teacher workshops.

The product identifies individualized instruction and discusses the contributions to individualization which can be made by ability grouping, nongrading, independent study, cooperative teaching, and the open classroom. Specific programs outlined in connection with these topics include Individually Guided Education (IGE), Program for Learning In Accordance with Needs (PLAN), and Individually Prescribed Instruction (IPI). The meaning and benefits of mastery and self-direction in contributing to individualization are also discussed.

This product is designed to be studied separately, or in conjunction with other units of the training program. It is usable on a self-instructional basis or with the direction of an instructor. An instructor's guide is provided for use with any of the program units. It is recommended that the student use unit 1 of the program, *Training Program Introduction and General Study Plan Guide*, as one basis for selecting this particular product for study.

SUBJECT AREA(S)

Leadership in local educational change.

This product offers a 13-step set of objectives dealing with the definition and interrelationships of the themes of individualization, mastery, and student self-direction. It utilizes a number of specific programs as illustrations of individualized instruction and invites comparison of these programs in terms of the three main themes. The product also offers students the opportunity to utilize individualized learning, self-direction, and mastery in their study of the objectives.

INTENDED USERS AND BENEFICIARIES

This product is intended for use by anyone in education who is required to offer leadership, whether full time or part time, in local educational improvement programs. This includes school district leaders, central administrators, curriculum coordinators, building principals, teacher workshop participants, State education department field consultants, and graduate students in administration and supervision.

GOAL(S) OR PURPOSE(S)

The goal of the product is to enable local educational agencies to do a more effective job of planning and conducting individualized programs in curriculum or organization for instruction.

PATTERNS OF USE

This product is a self-contained unit designed to be fully self-instructional. The student can restrict study to this one unit of the training program, or can study any combination of the remaining nine program units. The product can also be studied under the direction of an instructor in a course or workshop.

It is recommended that the student use unit 1, *Training Program Introduction and General Study Plan Guide*, in determining whether to study this and other program units. Also, the instructor can decide whether this product should be studied by the student.

Before studying the unit, the student takes a preassessment exercise to measure initial mastery of any unit objectives. On the basis of the preassessment results, the decision is made regarding which unit objectives require more intensive study. Following completion of the unit, the student takes the postassessment exercise to determine whether mastery of the objectives has been achieved or whether further study is required.

ASSESSMENT PROVISIONS

Preassessment and postassessment exercises, with answer keys, give bases for planning study of the product and for assessing terminal mastery. Throughout study of the product, the student uses the answer keys to exercises in checking progress.

TIME REQUIREMENTS

Time required to complete the product varies between 5 and 10 hours, depending on how intensively the student needs to work on product objectives.

IMPLEMENTATION PROCEDURES

Since the product can be studied on a fully self-instructional basis, the student can use it without instructional help. Normally, it is expected that the product will be used in course work or an inservice workshop under an instructor.

The product has been used in various states of development in the following ways: As part of the training of doctoral students in curriculum and supervision, with field consultants of an educational laboratory, and with central administrators or building principals of school systems.

Summary Cost Information

All cost figures given are estimates. It is recommended that the student also purchase unit 1 of the program, *Training Program Introduction and General Study Plan Guide*, of which this is a component, at a cost of $3. Therefore, for each student using this product in connection with unit 1 of the training program, the cost would be $9. Unit 1 is usable in planning study of any of units 2-10 of the training program, so the cost of this would not need to be duplicated if the student used additional units of the program. The cost per instructor would be $2 for the instructor's guide, $3 for unit 1, and $6 for the present training product (which is unit 4 of the training program).

Personnel Required for Product Adoption and Implementation

In view of the self-instructional features of the product, no instructional personnel are required. However, it is recommended that there be an instructor to help students select the product for study, to assist them while studying the product, and to help evaluate mastery of product objectives.

ASSURANCES AND CLAIMS

This product is concerned with rational principles and procedures in offering leadership for any change program in local educational settings. This makes it essentially neutral with respect to any form of biasing effects. In various user situations, no claim has been made of any harmful effects from study of the unit or from application of its contents.

A feature of the product's rationale and of the programs described in it is that they call for employing individualization, mastery, and self-direction with all students. Both the rational bases for the programs and the accumulated research evidence favor the judgment that they offer particular benefits in the form of enhancing positive self-concepts in slower learners and culturally different students.

While the product has not been used except with the producer's direction, the fact that it has been designed to be fully self-instructional insures that it is transportable for use in various settings independently of the producer.

INSTRUCTOR'S GUIDE TO TRAINING FOR LEADERSHIP IN LOCAL EDUCATIONAL IMPROVEMENT PROGRAMS (A 10-UNIT TRAINING PROGRAM)

Description of a 10-unit training program and how it can be used in planning and conducting instruction with educational leaders in different categories

Instructor's Guide to Training for Leadership in Local Educational Improvement Programs is a product designed to assist the instructor in helping students select units from the 10-unit training program and in guiding their study of the units selected.

The training program is intended for use by anyone taking leadership in the design and conduct of local educational improvement programs. Within school systems, this includes central office administrators and supervisors, building principals, and teachers who are members of change project teams. Outside school systems, such leadership may come from field consultants in State education departments or other educational agencies that serve local school districts. The training program is also suited for use by graduate students in curriculum, supervision, and administration.

The training program consists of an introductory unit, five units dealing with aspects of theory and procedures for planning and conducting local improvement programs, and four units dealing with key themes underlying many improvement programs: Individualization, mastery, student self-direction, problem-solving skills, personal/social development, and making schools relevant to students' needs.

This instructor's guide is designed to help the instructor make use of the training units in improving the competencies of educational personnel whose jobs call for leadership in local improvement programs. The instructor may be a university professor who is teaching graduate students or conducting workshops with school district personnel, a State education department official, a staff member of an agency such as a regional educational laboratory or private educational consulting firm, or an administrator in a school district.

This product offers the instructor a general orientation to the nature and purposes of the training program and offers procedures for assisting students in choosing and studying units of the program.

SUBJECT AREA(S)

Leadership in local educational change.

This product offers the instructor guidelines for assisting students in their work with units of the Training for Leadership in Local Educational Improvement Programs. The product introduces the instructor to the nature and contents of the training program and offers guidance in helping students select and study program units.

INTENDED USERS AND BENEFICIARIES

This product is designed for use by instructors conducting training of individuals or groups with use of selected units of the training program to which this instructor's guide refers. Users of the guide may be university professors, field personnel of State education departments or other educational agencies serving schools, or school system leaders conducting inservice workshops with other school system personnel.

GOAL(S) OR PURPOSE(S)

The purpose of the product is to help the instructor conduct training activities using units of the program to which this instructor's guide refers. The ultimate intent is that local educational agencies, through such training, improve their capabilities in planning and conducting significant improvement programs.

PATTERNS OF USE

This product is a self-contained unit for the instructor's use. It is recommended that the instructor also possess a copy of unit 1 of the 10-unit training program, *Training Program Introduction and General Study Plan Guide*, since each student is expected to use unit 1 in arriving at an individual study plan that makes use of some of the units of the training program.

The specific ways in which the instructor will use the guide depend on the purposes of instruction and on students, settings, and time for study. The guide allows for such flexibility in its use.

ASSESSMENT PROVISIONS

No provisions for assessing the value of the instructor's guide are included in the product. However, reports on use of the guide will be sought from instructors.

TIME REQUIREMENTS

Time required to become familiar with the content of the guide is 1 to 2 hours. In making use of the guide with students, time requirements will vary depending on how many students are involved. Probably not more than 1/2 hour of the instructor's time per student will be required in helping the student arrive at a study plan through use of unit 1 of the training program.

IMPLEMENTATION PROCEDURES

No problems of implementation are involved since this is a self-explanatory instructor's guide. It is desirable that the instructor use this guide while having a copy of unit 1 of the training program in hand. However, the instructor could make use of the student's copy of unit 1. Also, if the instructor is to work with different students who will be studying different units of the training program, it will be desirable for the instructor to have access to a complete set of units of the program.

Summary Cost Information

The given cost figures are estimates. For each instructor using this product in connection with unit 1 of the training program, the cost would be $5. Obtaining the full set of nine other units in the training program would cost approximately $50.

Personnel Required for Product Adoption and Implementation

Since the product is self-explanatory, no personnel are needed to teach the instructor how to use it.

ASSURANCES AND CLAIMS

This product is a guide for instructors' use in working with students who are using units in a training program on leadership for local educational change. There is no reason to believe that it could have any harmful effects. The product's contents are neutral with respect to any sort of biasing effects. The product is designed to be usable by the instructor without assistance from the producer. This transportability is enhanced by the fact that the training units are self-instructional, thus giving the instructor the option of working with students on a fully individualized basis or of teaching student groups in more conventional ways.

PERSONAL/SOCIAL DEVELOPMENT AS AN EDUCATIONAL THEME, WITH RELATED INNOVATIONS (COMPONENT OF 10-UNIT PROGRAM OF TRAINING FOR LEADERSHIP IN LOCAL EDUCATIONAL IMPROVEMENT PROGRAMS)

A self-instructional training unit describing aspects of personal/social development and analyzing approaches to achieving these goals

Personal/Social Development as an Educational Theme, With Related Innovations is a training product offering anyone with responsibility for leadership in educational improvement programs, concepts, and principles for use in planning and conducting local change programs directed toward enhancing students' personal and social development. The product is appropriate for persons holding a variety of positions within education. In school systems, these include central administrators, department chairpersons, building principals, guidance counselors, and teachers who have roles in improvement programs. Field consultants in State education departments, educational laboratories, or private educational consulting firms can benefit from study of the product. Also, the product is suitable for study by graduate students in curriculum, supervision, or administration.

The product discusses the importance of personal/social development as an emphasis in the school program, and in successive objectives, treats self-concept, achievement motivation, interests, impulsiveness, self-direction, values, empathy, and interpersonal competencies. Various innovations related to promoting positive personal/social development are examined, e.g., mastery and individualization in relation to self-concept, behavior modification, achievement-competency training, and training teachers to work with inner-city children. A checklist for evaluating instruction in terms of personal/social development is included.

The product consists of a volume divided into sections according to 19 objectives. Pertinent literature is referred to or, in some instances, included in the product. Numerous exercises are presented, each supplied with a worksheet and an answer key. Also included are preassessment and postassessment exercises, together with answer keys.

The product can be studied separately or together with other units of the training program. It can be used on a self-instructional basis or under an instructor's guidance. A general instructor's guide for the training program as a whole is provided. It is recommended that the student use unit 1, *Training Program Introduction and General Study Plan Guide*, as one basis for selecting this product for study.

SUBJECT AREA(S)

Leadership in local educational change.

The product contributes to the designated knowledge and procedures of use by any person having responsibility for leadership in educational improvement programs directed toward furthering students' personal and social development. The product reviews goals of personal/social development and examines various innovations intended to improve the accomplishment of those goals.

INTENDED USERS AND BENEFICIARIES

The product is intended for use by anyone in education who is called upon to offer full-time or part-time leadership in local educational improvement programs: School district leaders—central administrators, curriculum coordinators, building principals, and teacher members of project teams; field consultants from State education departments, educational laboratories, or private consulting firms; and graduate students in administration or supervision.

GOAL(S) OR PURPOSE(S)

The goal of the product is to enable local educational agencies to do a more effective job of planning and conducting improvement programs in enhancing students' personal/social development.

PATTERNS OF USE

This product is a self-contained unit designed to be fully self-instructional. The student can restrict study to this one unit of the training program or can study any combination of the remaining nine program units. The product can also be studied under the direction of an instructor in a course or workshop.

INFORMATION UTILIZATION AND DISSEMINATION

RD 160 008

It is recommended that the student use unit 1, *Training Program Introduction and General Study Plan Guide*, in determining whether to study this and other program units. Also, the instructor can decide whether this product should be studied by the student.

Before studying the unit, the student takes a preassessment exercise to measure initial mastery of any unit objectives. On the basis of the preassessment results, the decision is made regarding which unit objectives require more intensive study. Following completion of the unit, the student takes the postassessment exercise to determine whether mastery of the objectives has been achieved or whether further study is required.

ASSESSMENT PROVISIONS

Preassessment and postassessment exercises, with answer keys, give bases for planning study of the product and for assessing terminal mastery. Throughout study of the product, the student uses the answer keys to exercises in checking progress.

TIME REQUIREMENTS

Time required to complete the product varies between 6 and 10 hours, depending on how intensively the student needs to work on product objectives.

IMPLEMENTATION PROCEDURES

Since the product can be studied on a fully self-instructional basis, the student can use it without instructional help. Normally, it is expected that the product will be used in course work or an inservice workshop under an instructor.

Summary Cost Information

All cost figures given are estimates. It is recommended that the student also purchase unit 1 of the program, *Training Program Introduction and General Study Plan Guide*, of which this is a component, at a cost of $3. Therefore, for each student using this product in connection with unit 1 of the training program, the cost would be $9. Unit 1 is usable in planning study of any of units 2-10 of the training program, so the cost of this would not need to be duplicated if the student used additional units of the program. The cost per instructor would be $2 for the instructor's guide, $3 for unit 1, and $6 for the present training product (which is unit 6 of the training program).

ASSURANCES AND CLAIMS

This product is concerned with principles and procedures involved in offering leadership in planning local educational improvement programs directed toward students' sound personal and social development. Specific efforts have been made to insure that the product materials stress making provisions to meet the needs of all students in terms of their backgrounds and characteristics. Included are materials related to excluding bias in the form of sex typing. Also, stress is placed on provisions for meeting the needs of members of cultural minorities. Expert critics who have examined the product in the initial draft version have made no mention of possible harmful or biasing effects.

The product is designed to be fully self-contained and self-instructional; i.e., transportable and usable without assistance from the producer. If the product is used under an instructor's guidance, an instructor's guide is provided to offer specific recommendations and procedures for the product's use.

MATERIALS AND EQUIPMENT

PROMOTING CHANGE IN SCHOOLS, A DIFFUSION CASEBOOK

RD 160 009

Ten case studies of successful innovations

Promoting Change in Schools, A Diffusion Casebook contains reports that examine the histories of 10 products or programs. The focus is diffusion—the process by which an innovation reaches users—but the reports also examine product design and testing, since the actions taken at these stages can have a crucial impact on eventual market success. Programs or products included in the book cut across a number of dimensions that represent important clues to diffusion success or failure, possess a wide range of types and degrees of innovational complexity, and have been developed and distributed by various combinations of research and development agencies, other nonprofit agencies, and commercial firms.

The introduction presents tentative conclusions drawn from the studies, and calls attention to problems that have not been recognized early enough in all past efforts. The casebook tells a story of growing skill in working toward the adoption and implementation of innovative products. It points out that people who have developed and disseminated innovative educational products have learned that naive expectations will not be fulfilled; the proverbial "better mousetrap" does not sell itself. Instead of just developing and polishing a product and then hoping for the best, they are beginning to think of diffusion as a problem that deserves careful consideration at all stages of the development and dissemination process.

SUBJECT AREA(S)

Diffusion of educational products or programs is the subject area.

INTENDED USERS AND BENEFICIARIES

The intended users are funding agencies and developers and disseminators of educational programs.

GOAL(S) OR PURPOSE(S)

The major goals are to help fill a need in the diffusion literature for facts and inferences called from practical experience and to give advice to developers, disseminators, and funding agencies.

PATTERNS OF USE

The product includes a background and reference book.

RELEVANCE AS AN EDUCATIONAL THEME, WITH RELATED INNOVATIONS (COMPONENT OF 10-UNIT PROGRAM OF TRAINING FOR LEADERSHIP IN LOCAL EDUCATIONAL IMPROVEMENT PROGRAMS)

*A training program analyzing meanings of
relevance and examining various approaches to
achieving relevance in the school program*

Relevance as an Educational Theme, With Related Innovations is a training product designed for use by anyone having responsibility for leadership in local educational improvement programs to make instruction better suited to the needs, interests, and backgrounds of students. The product is especially appropriate for educators desiring a conceptual basis for examining curriculum and instruction in terms of provisions for insuring relevance. Within school systems, associate or assistant superintendents for instruction, building principals, and curriculum coordinators or department chairpersons are likely to find the product of value. Community members, especially those representing minority groups, are also apt to find the product useful. The product is well suited for study by graduate students in curriculum, supervision, or administration. Field consultants from State education departments and other education agencies may find the product useful in their work with school districts.

The product offers criteria of relevance and surveys common failures of schools to make instruction relevant generally for students and particularly for members of minority groups. Various means for improving relevance are reviewed: Student and community sharing in school decisionmaking, curriculum modifications, changes in instructional procedures, and alternative programs.

The product consists of a volume divided into 11 sections corresponding to product objectives. Key readings are included and are supplemented by references to the literature. The product can be studied on a self-instructional basis or with assistance from an instructor. Group discussion should follow study of the product. An instructor's guide is provided for use with this and other components of the training program. The student can study only this product or study it together with other selected units of the 10-unit training program. It is recommended that the student use unit 1, *Training Program Introduction and General Study Plan Guide*, as one basis for selecting this product for study.

SUBJECT AREA(S)

Leadership in local educational change.

This product contributes to the designated knowledge and skills in offering leadership in planning any local educational improvement program designed to increase the relevance of the school program to the needs and characteristics of students. The product presents criteria of relevance, reviews failures of most schools to make instruction relevant for students generally and, particularly, for members of minority groups. The means for improving the schools' relevance include curriculum changes, changes in instructional procedures, and changes in the learning climate of the school. The product gives attention to alternative programs as one way of improving relevance.

INTENDED USERS AND BENEFICIARIES

The product is intended for use by anyone in education who is called upon to offer full-time or part-time leadership in local educational improvement programs: School district leaders—central administrators, curriculum coordinators, building principals, and teacher members of project teams; field consultants from State education departments, educational laboratories, or private consulting firms; and graduate students in administration and supervision.

GOAL(S) OR PURPOSE(S)

The goal of the product is to enable local educational agencies to do a more effective job of planning and conducting improvement programs, whether in curriculum, organization for instruction, school climate, school/community relations, or any other aspect of a school system.

PATTERNS OF USE

This product is a self-contained unit designed to be fully self-instructional. The student can restrict study to this one unit of the training program, or can study any combination of the remaining nine program units. The product can also be studied under the direction of an instructor in a course or workshop.

It is recommended that the student use unit 1, *Training Program Introduction and General Study Plan Guide*, in determining whether to study this and other program units. Also, the instructor can decide whether this product should be studied by the student.

Before studying the unit, the student takes a preassessment exercise to measure initial mastery of any unit objectives. On the basis of the preassessment results, the decision is made regarding which unit objectives require more intensive study. Following completion of the unit, the student takes the postassessment exercise to determine whether mastery of the objectives has been achieved or whether further study is required.

ASSESSMENT PROVISIONS

Preassessment and postassessment exercises, with answer keys, give bases for planning study of the product and for assessing terminal mastery. Throughout study of the product, the student uses the answer keys to exercises in checking progress.

TIME REQUIREMENTS

Time required to complete the product varies between 5 and 10 hours, depending on how intensively the student needs to work on product objectives.

IMPLEMENTATION PROCEDURES

Since the product can be studied on a fully self-instructional basis, the student can use it without instructional help. Normally, it is expected that the product will be used in course work or an inservice workshop under an instructor.

The product has been used in various states of development in the following ways: As part of a training program offered field consultants of State education departments, as part of the training of doctoral students in curriculum and supervision, with field consultants or an educational laboratory, and with central administrators or building principals of school systems.

Summary Cost Information

All cost figures given are estimates. It is recommended that the student also purchase unit 1 of the program, *Training Program Introduction and General Study Plan Guide*, of which this is a component, at a cost of $3. Therefore, for each student using this product in connection with unit 1 of the training program, the cost would be $9. Unit 1 is usable in planning study of any of units 2-10 of the program, so the cost of this would not need to be duplicated if the student used additional units of the program. The cost per instructor would be $2 for the instructor's guide, $3 for unit 1, and $6 for the present training product (which is unit 7 of the training program).

Personnel Required for Product Adoption and Implementation

In view of the self-instructional features of the product, no instructional personnel are required. However, it is recommended that there be an instructor to help students select the product for study, to assist them while studying the product, and to help evaluate mastery of product objectives.

ASSURANCES AND CLAIMS

This product is designed specifically to train educational leaders to plan school improvement programs that are designed to meet the needs of all students with respect to their individual characteristics. As such, it gives particular attention to eliminating biasing effects related to instructing different categories of students, particularly members of minority groups. Eliminating sex typing in curriculum and instruction is one emphasis in the product materials. Expert critics who have examined the product in its initial version have not noted any likelihood of harmful or biasing effects.

The product is designed to be fully self-contained and self-instructional; i.e., transportable and usable without assistance from the producer. If the product is used under an instructor's guidance, an instructor's guide is provided to offer specific recommendations and procedures for the product's use.

SELECTING AN EDUCATIONAL IMPROVEMENT PROGRAM (COMPONENT OF 10-UNIT PROGRAM OF TRAINING FOR LEADERSHIP IN LOCAL EDUCATIONAL IMPROVEMENT PROGRAMS)

*A self-instructional training unit providing
a six-step model of the process of selecting
an improvement program to meet local needs*

Selecting an Educational Improvement Program is a training product providing anyone with a specialty of leadership in local educational improvement programs a conceptual model for use in the process of helping school system personnel choose an improvement program that will meet their needs. School district personnel who may find study of the product of value include central office personnel, curriculum specialists, building principals, and teachers. Field consultants in State education departments or staff members of other educational agencies serving schools may also find the product valuable in their work. The product can also be useful for graduate students in administration or supervision.

The product is organized as a model for the process of selecting an improvement program that involves identifying needs for improvement, surveying resources that could meet these needs, analyzing local factors related to adopting different changes, and choosing the changes to be introduced in a way that takes account of needs, resources, and local assets or liabilities.

The product consists of a volume organized in terms of eight objectives. Case materials and associated exercises are included to give the student practice in applying the conceptual materials offered. Each exercise is supplied with an answer key. The product includes preassessment and postassessment exercises, together with answer keys. The product can be studied on a self-instructional basis or with assistance from an instructor. An instructor's guide is provided for use with this product and other units of the training program. The student can use this product separately or in combination with other selected units of the training program.

SUBJECT AREA(S)

Leadership in local educational change.

The product contributes to knowledge and skills required in offering leadership in planning and conducting any local educational improvement program. The product presents a 6-step model of the process of arriving at the choice of an improvement program. They are: Identifying the area where improvement is needed, specifying aims in the area, assessing shortcomings in accomplishing these aims, determining likely causes of the shortcomings, identifying resources that could remedy the shortcomings, surveying local factors favoring or opposing adoption of any desired resources, and selecting the improvement program to be adopted.

INTENDED USERS AND BENEFICIARIES

The product is intended for use by anyone in education who offers full-time or part-time leadership in local educational improvement programs: School district leaders, central administrators, curriculum coordinators, building principals, teacher members of project teams; field consultants from State education departments, educational laboratories, or private consulting firms; and graduate students in administration or supervision.

GOAL(S) OR PURPOSE(S)

The goal of the product is to enable local educational agencies to do a more effective job of planning improvement programs of any kind, including curriculum, organization for instruction, school climate, and school/community relations.

PATTERNS OF USE

The product is a self-contained unit and is designed to be fully self-instructional. The student can restrict study to this one unit of the training program or can study any combination of the remaining units of the 10-unit program. The product can also be studied under the direction of an instructor in a course or workshop.

It is recommended that the student use unit 1, *Training Program Introduction and General Study Plan Guide*, in deciding to study this and other program units. Also, the instructor can decide for the student that this product should be studied. It is further recommended that the student first use unit 3 of the training program, "Task Flow for Designing and Conducting Local Educational Improvement Programs," since that unit covers the full process of planning and conducting improvement programs.

Selecting an improvement program is a part of this total process.

ASSESSMENT PROVISIONS

Preassessment and postassessment exercises, with answer keys, give bases for planning study of the product and for assessing terminal mastery. Throughout study of the product, the student uses the answer keys to the exercises in checking progress.

TIME REQUIREMENTS

Time required to complete the product varies between 4 and 6 hours, depending on how intensively the student needs to work on product objectives.

IMPLEMENTATION PROCEDURES

Although this product can be studied on a self-instructional basis, it is usually expected that the product will be used in course work or an inservice workshop under an instructor.

The product, in various stages of develoment, has been used in the following ways: (1) As part of a training program offered to field consultants of State education departments, (2) as part of the training of doctoral students in curriculum and supervision, (3) with field consultants of an educational laboratory, and (4) with central administrators or building principals of school systems.

Summary Cost Information

All cost figures given are estimates. It is recommended that the student also purchase unit 1 of the program, *Training Program Introduction and General Study Plan Guide,* of which this is a component, at a cost of $3. Therefore, for each student using this product in connection with unit 1 of the training program, the cost would be $8. Unit 1 is usable in planning study of any of units 2-10 of the training program, so the cost of this would not need to be duplicated if the student used additional units of the program. The cost per instructor would be $2 for the instructor's guide, $3 for unit 1, and $5, for *Selecting an Educational Improvement Program* (which is unit 8 of the training program).

Personnel Required for Product Adoption and Implementation

In view of the self-instructional quality of the product, no instructional personnel are required. It is recommended, however, that there be an instructor to help students select the product for study, to assist them while studying the product, and to help evaluate mastery of product objectives.

ASSURANCES AND CLAIMS

The product is concerned with rational principles and procedures in offering leadership for any change program in local educational settings. The case materials used in the product have been chosen to focus on meeting needs of inner-city students through such means as individualizing instruction and providing alternative programs. Nothing in the product can reasonably be expected to have any harmful or biasing effects.

Transportability of the product and its use independent of the producer are provided for by the design (i.e., fully self-instructional). In the event the product is used with direction from an instructor, an instructor's guide is provided giving specific procedures for using the product with students.

TASK FLOW FOR DESIGNING AND CONDUCTING LOCAL EDUCATIONAL IMPROVEMENT PROGRAMS (COMPONENT OF 10-UNIT PROGRAM OF TRAINING FOR LEADERSHIP IN LOCAL EDUCATIONAL IMPROVEMENT PROGRAMS)

*A self-instructional training product presenting
an 11-step task flow model for planning and
conducting a local improvement program*

Task Flow for Designing and Conducting Local Educational Improvement Programs is a training product offering anyone having a specialty of leadership in local educational change programs a general 11-step model to be employed in designing and conducting such programs. The product is appropriate for persons holding a variety of positions. Within school systems, these include central administrators, system-level curriculum coordinators, department chairpersons, building principals, or teachers who are members of project teams. Field consultants in State education departments, educational laboratories, or private educational consulting firms can benefit from study of the product. Also, it is suitable for use by graduate students in educational administration or supervision.

The product presents a model for problem solving in any type of situation within or outside education. The 11-step model for educational improvement programs covers the following: Local needs analysis, analysis of causes of shortcomings in meeting these needs, surveying resources that could meet the needs, selecting resources for inclusion in the improvement program, designing the program, implementing it, and evaluating its outcomes.

The product consists of a volume divided into 10 sections. Following presentation of the general problem-solving model, a detailed case study of the steps in planning and installing an actual middle school program is presented. Succeeding sections of the product present the steps of the task flow, with exercises based on the appropriate section of the case protocol. Each exercise has a worksheet and an answer key. Also included are preassessment and postassessment exercises with answer keys.

The product is designed to be studied separately or together with other selected units of the training program. It is usable on a self-instructional basis or under an instructor's guidance. A general instructor's guide for the training program as a whole is provided. It is recommended that the student use unit 1, *Training Program Introduction and General Study Plan Guide*, as one basis for selecting this product for study.

SUBJECT AREA(S)

Leadership in local educational change.

This product contributes to the designated knowledge and skills in offering leadership in planning and conducting local educational improvement programs. The product offers a general 11-step model of problem solving as a conceptual basis for the leadership tasks involved in change programs. Also, it offers practice in applying steps in the task flow to the analysis of case data on needs analysis, causal analysis, resources search, local constraints/supports analysis, change program selection and design, program implementation, and evaluation of program outcomes.

INTENDED USERS AND BENEFICIARIES

The product is intended for use by anyone in education who is called upon to offer full-time or part-time leadership in local educational improvement programs: School district leaders—central administrators, curriculum coordinators, building principals, and teacher members of project teams; field consultants from State education departments, educational laboratories, or private consulting firms; and graduate students in administration and supervision.

GOAL(S) OR PURPOSE(S)

The goal of this product is to enable local educational agencies to do a more effective job of planning and conducting improvement programs, whether in curriculum, organization for instruction, school climate, school/community relations, or any other aspect of a school system.

PATTERNS OF USE

This product is a self-contained unit designed to be fully self-instructional. The student can restrict study to this one unit of the training program, or can study any combination of the remaining nine program units. The product can also be studied under the direction of an instructor in a course or workshop.

It is recommended that the student use unit 1, *Training Program Introduction and General Study Plan Guide*, in determining whether to study this and other program units. Also, the instructor can decide whether this product should be studied by the student.

Before studying the unit, the student takes a preassessment exercise to measure initial mastery of any unit objectives. On the basis of the preassessment results, the decision is made regarding which unit objectives require either review or more intensive study. Following completion of the unit, the student takes the postassessment exercise to determine whether mastery of the objectives has been achieved or whether further study is required.

ASSESSMENT PROVISIONS

Preassessment and postassessment exercises, with answer keys, give bases for planning study of the product and for assessing terminal mastery. Throughout study of the product, the student uses the answer keys to exercises in checking progress.

TIME REQUIREMENTS

Time required to complete the product varies between 6 and 10 hours, depending on how intensively the student needs to work on product objectives.

IMPLEMENTATION PROCEDURES

Since the product can be studied on a fully self-instructional basis, the student can use it without instructional help. Normally, it is expected that the product will be used in course work or in an inservice workshop under an instructor.

The product, in various stages of development, has been used in the following ways: As part of a training program offered to field consultants of State education departments, as part of the training of doctoral students in curriculum and supervision, with field consultants of an educational laboratory, and with central administrators or building principals of school systems.

Summary Cost Information

All cost figures given are estimates. It is recommended that the student also purchase unit 1 of the program, *Training Program Introduction and General Study Plan Guide*, of which this is a component, at a cost of $3. Therefore, for each student using the product in connection with unit 1 of the training program, the cost would be $9. Unit 1 is usable in planning study of any of units 2-10 of the training program, so the cost of this would not need to be duplicated if the student used additional units of the program. The cost per instructor would be $2 for the instructor's guide, $3 for unit 1, and $6 for the present training product (which is unit 3 of the training program).

Personnel Required for Product Adoption and Implementation

In view of the self-instructional features of the product, no instructional personnel are required. However, it is recommended that there be an instructor to help students select the product for study, to assist them while studying the product, and to help evaluate mastery of product objectives.

ASSURANCES AND CLAIMS

This product is concerned with rational principles and procedures in offering leadership for any change program in local educational settings. This makes it essentially neutral with respect to any form of social biasing effects. In various user situations, no claim has been made of any harmful effects from study of the unit or from application of its contents.

The case material used in the product involves a middle school in a predominantly black community. The described program emphasizes high community involvement, individualizing instruction, and enhancement of student self-image in the middle school described. The school was named after a black community leader.

The product is designed to be fully self-contained and self-instructional; i.e., transportable and usable without assistance from the producer. If the product is used under an instructor's guidance, an instructor's guide is provided to offer specific recommendations and procedures for the product's use. While the product can be used independently of guidance from its producers, this has not yet occurred.

THEORY AND STRATEGIES OF LOCAL EDUCATIONAL IMPROVEMENT (COMPONENT OF 10-UNIT PROGRAM OF TRAINING FOR LEADERSHIP IN LOCAL EDUCATIONAL IMPROVEMENT PROGRAMS)

Conceptual models providing bases for selecting, designing, and conducting any kind of local school improvement program

Theory and Strategies of Local Educational Improvement is a training product that provides a general conceptual basis for selecting, designing, and conducting various improvement programs in a school district. The product is especially suitable for use by graduate students in administration and supervision. School system leaders (central office personnel, building principals, and curriculum coordinators) can benefit from studying it. Also, it can be used by field consultants in State education departments or other educational agencies serving local school districts.

The product consists of a volume divided into sections according to product objectives. The role of theory in planning and conducting change programs is examined. Forces favoring and opposing change in school systems are surveyed. Various strategies for accomplishing needed changes are reviewed with particular attention to presenting guidelines for effective leadership in improvement programs.

The product can be studied separately or in conjunction with other units in the 10-unit training program. It can be studied on a wholly self-instructional basis or with direction from an instructor. An instructor's guide is provided for use with any of the program units. It is recommended that the student use unit 1 of the program, *Training Program Introduction and General Study Plan Guide*, as a basis for selecting this particular product for study.

SUBJECT AREA(S)

Leadership in local educational change.

This product contributes to knowledge basic to planning and conducting local educational improvement programs. Change theory is presented as a body of concepts and principles that can be applied to the design of effective change programs. Change strategies presented in the product include authoritarian versus participatory, product centered versus need centered, pilot versus total-system approaches, and the use of external versus internal leadership. Effective leadership in local improvement programs is considered in terms of working within local readinesses, offering expert assistance, and following rules of effective interpersonal relations and group processes.

INTENDED USERS AND BENEFICIARIES

The product is intended for use by anyone in education who is called upon to offer full-time or part-time leadership in local educational improvement programs: School district leaders—central administrators, curriculum coordinators, building principals, and teacher members of project teams; field consultants from State education departments, educational laboratories, or private consulting firms; and graduate students in administration or supervision.

GOAL(S) OR PURPOSE(S)

The goal of the product is to enable local educational agencies to do a more effective job of planning and conducting improvement programs, whether in curriculum, organization for instruction, school climate, school/community relations, or any other aspect of a school system.

PATTERNS OF USE

The product is a self-contained unit and is designed to be fully self-instructional. The student can restrict study to this 1 unit of the training program or can study any combination of the remaining units of the 10-unit program. The product can also be studied under the direction of an instructor in a course or workshop.

It is recommended that the student use unit 1, *Training Program Introduction and General Study Plan Guide*, in deciding to study this and other program units. Also, the instructor can decide whether this product should be studied by the student.

In studying the product, the student first takes the preassessment exercise to measure initial mastery of any unit objectives. On this basis, the decision is made as to which product objectives require review only and which require careful study. Following completion of the product, the student takes the postassessment exercise to determine whether mastery has been achieved or whether further study is needed.

ASSESSMENT PROVISIONS

Preassessment and postassessment exercises, with answer keys, give bases for planning study of the product and for assessing terminal mastery. Throughout study of the product, the student uses the answer keys to exercises in checking progress.

TIME REQUIREMENTS

Time required to complete the product varies between 4 and 8 hours, depending on how intensively the student needs to work on product objectives.

IMPLEMENTATION PROCEDURES

Since the product can be studied on a fully self-instructional basis, the student can use it without instructional help. Normally, it is expected that the product will be used in course work or in an inservice workshop under an instructor.

Summary Cost Information

All cost figures given are estimates. For each student using this product in connection with unit 1 of the training program, the cost would be $8. Unit 1 is usable in planning study of any of units 2-10 of the training program, so the cost of this would not need to be duplicated if the student used additional units of the program. The cost per instructor would be $2 for the instructor's guide, $3 for unit 1, and $5 for the present training product (which is unit 2 of the training program).

Personnel Required for Product Adoption and Implementation

In view of the self-instructional features of the product, no instructional personnel are required. However, it is recommended that there be an instructor to help students select the product for study, to assist them while studying the product, and to help evaluate mastery of product objectives.

ASSURANCES AND CLAIMS

This product is concerned with rational principles and procedures involved in offering leadership in any local educational improvement program. This makes it essentially neutral with respect to any harmful or biasing effects. Expert critics who have examined the product in the initial draft version have not found likelihood of such effects.

The product is designed to be transportable and usable without assistance from the producer. However, such use has not yet been made of the product.

TRAINING PROGRAM INSTRUCTION AND GENERAL STUDY PLAN GUIDE (COMPONENT OF 10-UNIT PROGRAM OF TRAINING FOR LEADERSHIP IN LOCAL EDUCATIONAL IMPROVEMENT PROGRAMS)

Self-instructional training unit on types of
local change programs and leadership roles
in such programs

Training Program Introduction and General Study Plan Guide is a training product offering anyone having a specialty in leadership in local educational change programs an introduction to the full training program and a procedure for deciding which of units 2-10 of the program are to be studied.

The training program is intended for persons holding a variety of positions in school systems or in educational agencies serving school systems. This product should be studied first by anyone who can benefit from study of any of the remaining nine units. This includes, within a school system, central office administrators and supervisors, building principals, and teachers involved in planning or conducting any sort of change program. School board members and community representatives also may find some program units of value in their leadership roles. The program is also appropriate for use by field consultants of State education departments and other educational agencies serving schools. Finally, graduate students in curriculum, administration, and supervision can study selected program units with profit.

This product consists of a volume divided into two main sections. The first section reviews the purposes and nature of the training program under five objectives: Reviewing types of local change programs, identifying common shortcomings of such programs, surveying positions calling for leadership in local educational improvement, outlining qualifications for a specialty of leadership in local change programs, and outlining needs for training for such a specialty. The second section describes briefly the remaining nine units of the training program and offers the student a specific procedure for deciding which units are to be studied.

This product can be used on a self-instructional basis or with an instructor's assistance. A general instructor's guide for the training program as a whole is provided. It is recommended that all students use this product as the basis for deciding which of the program units will be studied.

SUBJECT AREA(S)

Leadership in local educational change.

This product offers a survey of types of local educational improvement programs, then examines positions and roles of educators having responsibility for leadership in planning and conducting such programs. It also offers a planning guide that describes units of the training program introduced by the product and gives the student a procedure for deciding which of the units are to be included in the study plan. The units from which a selection is to be made cover the following topics:

(1) Theory and strategies of local educational improvement programs;

(2) Task flow for designing and conducting local improvement programs;

(3) Individualization, mastery, and student self-direction in instruction

Inquiry as an instructional theme,
Personal/social development as a theme in instruction,
Relevance as an instructional theme,
Selecting an educational improvement program,
Improving the implementation of a local educational program; and

(4) Diffusing educational improvement programs within a school system.

INTENDED USERS AND BENEFICIARIES

This product is intended to be used as an introduction to the training program by anyone in education who offers full-time or part-time leadership in local educational improvement programs. In school districts, this means central administrators, curriculum coordinators, building principals, and teacher members of project teams. Field consultants from State education departments or other educational agencies serving schools will probably find study of this product valuable in deciding which of the training units they or their clients should study. The product will also be valuable to graduate students in curriculum, administration, and supervision as an orientation to the training program and as a guide to planning use of any units in the program.

GOAL(S) OR PURPOSE(S)

This product has been designed to guide educational personnel in undertaking training activities that will contribute toward more effective improvement programs in school systems, whether those programs are in curriculum, instructional procedures, organization for instruction, school/community relations, or any other aspect of a school system.

PATTERNS OF USE

This product is a self-contained unit and is designed to be fully self-instructional. Since this product introduces the remaining nine units of the training program, it is assumed that its function will be that of aiding the student in selecting other units for study. If the student has an instructor, this product normally would be studied under the instructor's direction.

In studying the product, the student reads the first part and performs the exercises it includes. The student then follows the procedures described in the general study plan guide in arriving at a choice of units of the training program that are to be studied.

ASSESSMENT PROVISIONS

Since this product is an introduction to the training program, no assessment materials are included other than the student's self-assessment of training needs.

TIME REQUIREMENTS

Time required to complete the product varies between 2 and 4 hours, depending on how intensively the student elects to study the product.

IMPLEMENTATION PROCEDURES

Since the product can be studied on a fully self-instructional basis, the student can use it without instructional help. Normally, it is expected that the product will be used in course work or an inservice workshop under an instructor.

Summary Cost Information

The cost figures given are estimates. Each student should use this product in combination with one or more of units 2-10 of the training program. The cost to the student would then be $3 for this product plus the cost of additional units chosen. It is recommended that the instructor, if there is one, purchase this product and the program's instructor's guide at a cost of $2, or a total cost of $5.

Personnel Required for Product Adoption and Implementation

In view of the self-instructional nature of the product, no instructional personnel are required. It is recommended, however, that there be an instructor to help students survey types of change programs, types of leadership positions involved in local change programs, and qualifications for filling such positions. Also, the instructor should help the student examine the descriptions of units in the training program and to decide which units to study.

ASSURANCES AND CLAIMS

This product describes local school improvement programs and offers the individual student a planning guide for deciding which of nine training units are to be studied. There is no reason to expect any harmful or biasing effects. None of those who have used the product in an earlier version has noted any such potential effects.

The product is designed to be transportable and usable either on a fully self-instructional basis or with assistance from an instructor. However, it has not yet been used independently of the producer's guidance.

ALERT, A SOURCEBOOK OF ELEMENTARY CURRICULA, PROGRAMS, AND PROJECTS

A selected sample of curriculums, training programs, model projects, and resources for use in elementary education

ALERT, a Sourcebook of Elementary Curricula, Programs, and Projects provides information on a selected sample of curriculums, training programs, model projects, and resources for use in elementary education. Approximately 300 reports cover programs from a number of fields, including aesthetics and the arts, career education, drug education, early childhood education, environmental education, ethnic education, foreign-language arts, reading science, social studies, and mathematics. Each report is presented in a very readable format. First, a concise introductory section provides general information. Then, using an outline format, information is provided on such subjects as target audience, content emphasis, project goals, length of use, unit sequencing, instructional method, teacher's role and training, and program evaluation. Finally, a quick reference chart spells out the items required for the program, quantities needed, cost per item, and replacement rate. Each report follows the same format so that a reader can easily compare the merits of different programs.

SUBJECT AREA(S)

This sourcebook is concerned with elementary curriculums, programs, and projects.

INTENDED USERS AND BENEFICIARIES

School personnel responsible for selecting instructional programs constitute the primary target audience of ALERT. The catalog is also used in preservice and inservice teacher education and by teachers and others who are interested in learning about curriculum alternatives.

GOAL(S) OR PURPOSE(S)

The ALERT information system was conceptualized as a vehicle to increase school personnel awareness, understanding, and decision-oriented evaluation of new educational programs. The concern has been with disseminating information about the newer, empirically based educational developments, those that have been tested and demonstrated to be effective. It is designed to facilitate and improve curriculum decisionmaking, inservice training, preservice education, staff involvement, community participation, and public information.

PATTERNS OF USE

ALERT is used as a reference book by people who are looking for concise descriptions of elementary curriculum materials.

ASSURANCES AND CLAIMS

Results of a 2-year main field test indicate that users increased their knowledge of curriculum materials (increase in knowledge, however, did not meet developers' stringent standards), were able to compare and contrast programs, and could apply ALERT information to their own needs. Although the information contributed to decisionmaking, it in itself did not provide an adequate basis for making adoption/rejection decisions. Potential adopters need to personally examine the materials, talk to teachers who have used the programs, or see them in action. Responses to questions designed to elicit a general evaluation of ALERT were always highly favorable. All of the subjects in the sample felt the product was valuable and expressed a willingness to use it or recommend its use in the future.

BEHAVIOR OF INNOVATIVE PERSONNEL

A paper discussing characteristics of innovative educational personnel

This paper is devoted to a discussion of characteristics of innovative educational personnel and factors, such as the educational institution, that may affect innovative actions. The paper is divided into three sections. Section 1 presents a literature review that centers on three categories: Leadership, qualities of innovativeness, and change agents. Section 2 discusses the school as a setting for innovation under topics such as the social context of the school, the structure and function of the school, and the roles of persons in the school setting. Section 3 speculates upon the behaviors most appropriate to school persons who are or might be considered to be innovative. Several broad categories of behavior are identified.

SUBJECT AREA(S)

Subject areas include innovative personnel and factors contributing to their development and training.

INTENDED USERS AND BENEFICIARIES

Teacher trainers in all educational settings and also those responsible for inservice education are the intended users of this paper. Teacher trainers would be provided with performance objectives derived from a study of the characteristics of educational personnel who have demonstrated an ability to develop innovative techniques.

GOAL(S) OR PURPOSE(S)

The goal of this paper is to strengthen the knowledge base with regard to the characteristics of innovative personnel and the development of these characteristics.

COMMUNITY USE OF THE ERIC SYSTEM: INFORMATION PACKAGES

A set of packages to familiarize community groups with the ERIC information system

The *Community Use of the ERIC System* (CUES) project will develop two information packages, one for use by lay persons in local communities who influence educational decisionmaking and the other for use by ERIC collection holders. The purpose of the packages will be to assist these two groups in locating and using ERIC documents related to local educational problems.

The first package will be designed for such groups as boards of education, PTA's, persons running for or holding public office, citizen advisory committees, city council members, and others who are particularly concerned with school policy and decisionmaking. This package will contain guidelines and materials to teach this target audience to use the ERIC system for gathering information pertinent to their particular problems. The tentative items for the package include: Set of guidelines on how to use the ERIC system; selected abstracts on specific topics (e.g., busing/integration, cable television, accountability, bilingual education, and textbook selection); microfiche of a smaller number of documents on topics of interest to laypersons; selected bibliography of non-ERIC documents on such topics; guidelines on how to use the documents for educational problem solving; and information on how to find additional documents in ERIC.

The second package, for ERIC clearinghouses and other ERIC collection holders, will provide guidelines for assisting collection holders in directly serving the lay groups involved with education in their communities. The tentative items for the package include: Guidelines on how to assess the local community's educational problems, specific steps for collection holders to take to contact community groups, descriptions on how to conduct workshops for local groups, and an annotated bibliography on educational problem solving for use by community groups.

SUBJECT AREA(S)

Busing/integration, cable TV, accountability, bilingual education, textbook selection, censorship, and other local educational problems to be identified are the subject areas.

INTENDED USERS AND BENEFICIARIES

The first information package is intended for lay persons who are involved in educational decisionmaking at the community level. Such people include boards of education, PTA's, persons running for or holding public office, citizen advisory committees, and city council members.

The second information package will assist ERIC standing order customers in helping the various community groups.

CHANGE STRATEGIES AND TECHNIQUES FOR THE HELPER

An overview of the process of planned change

This monograph is designed to familiarize the reader with the process of planned change. Both the theory and practical aspects of introducing change into an existing system will be dealt with. Counselors will be introduced to a variety of useful techniques for introducing and implementing change within their own settings. The monograph was developed as a result of the extensive interest shown by participants at the 1973 and 1974 career development workshops sponsored by ERIC/CAPS in Ann Arbor.

SUBJECT AREA(S)

This publication will include information of change theory, specific steps and procedures that a person can use to effect change, and the importance of strategies for future change.

INTENDED USERS AND BENEFICIARIES

This monograph is intended for counselors and related professionals.

GOAL(S) OR PURPOSE(S)

The goal of this monograph is to provide counselors with the knowledge and skills they need to effect change in their own settings.

MATERIALS AND EQUIPMENT

The cost of this monograph has not yet been determined.

ASSURANCES AND CLAIMS

This monograph will not perpetuate sexism, racism, or other biases such as those related to religion, age, or socioeconomic stereotypes.

DEVELOPER/AUTHOR:

ERIC Counseling and Personnel Services Information Center

ERIC: WHAT IT IS, HOW TO USE IT

*A kit for individual or group training in use
of the ERIC system*

ERIC: What It Is, How To Use It introduces the Educational Resources Information Center (ERIC) to a variety of users. The primary purpose of the kit is to actively involve the user in learning about ERIC and its search tools. The kit has been designed for use with large or small groups or for self-instruction.

Providing the necessary materials and instructions for use, the kit includes: (1) Three filmstrip-cassettes that present, first, an overview of the ERIC system and, second, depending on the user, a focus on various aspects of an ERIC search; (2) easily reproducible mockups of the three main ERIC search documents, the *Thesaurus of ERIC Descriptors, Research in Education* (RIE), and the *Current Index to Journals in Education* (CIJE); (3) worksheets to assist the user in learning about ERIC procedures; and (4) a coordinator's manual that gives instructions on using the various kit components.

Since there is a variety of client groups who can use the ERIC system, the kit contains three levels of activities. Each level seeks to develop a greater degree of sophistication in the use of ERIC. The levels are: Level 1, An Introduction to ERIC; Level 2, Learning To Use *Research in Education*; and Level 3, Doing an ERIC Search.

SUBJECT AREA(S)

The subject area is Educational Resources Information Center; specifically, how to use the ERIC system.

INTENDED USERS AND BENEFICIARIES

A variety of groups can find this kit useful: ERIC clearinghouse visitors, librarians, undergraduate college instructors, community college instructors, graduate college instructors, high school students, undergraduate students, graduate students, school faculties, nontraditional educators, school administrators, professional organization memberships, government agency employees (Federal, State, and local levels), researchers, information specialists, and information retailers.

GOAL(S) OR PURPOSE(S)

For level 1, the specific objectives are to become aware of the ERIC resources and to know in general what ERIC is and how the ERIC system works.

For level 2, the specific objectives are: (1) To become aware of the kinds of educational problems for which ERIC can provide information; (2) to know how the primary ERIC search tool, *Resources in Education*, is organized and used; and (3) to gain skill in searching *Resources in Education* by doing a modified search.

For level 3, the specific objectives are: (1) To know how to use the three main ERIC search tools—*Thesaurus of ERIC Descriptors, Resources in Education*, and *Current Index to Journals in Education*; (2) to acquire skill in developing problem statements; (3) to gain skill in conducting an ERIC search by doing a modified search; and (4) to become aware of the kinds of educational problems for which ERIC provides information.

PATTERNS OF USE

The levels may be used in any order; however, it is desirable that level 1 precede the use of levels 2 and 3. Each level may be used independently. It is not suggested that levels 2 and 3 be used together.

ASSESSMENT PROVISIONS

There are no evaluation provisions made.

TIME REQUIREMENTS

Level 1 takes from 15 to 30 minutes to complete. The time for showing level 1 includes distribution of a handout on the ERIC system and response to questions.

Level 2 takes from 30 to 45 minutes to complete. Level 2 contains a search activity that lasts 15 to 30 minutes, depending on group size. The remaining time allows for questions and answers.

Level 3 takes from 60 to 75 minutes to complete. There are four stop sessions in level 3. Depending on group size, the stop-session activities will last approximately 1 hour and the remaining minutes can be used for group discussion.

IMPLEMENTATION PROCEDURES

The filmstrips and cassettes in the kit can be used on any standard filmstrip projector and cassette recorder. The automatic synchronization on the cassette was designed to be used with Sony equipment. It is useful if tables and chairs are provided rather than armchair desks so that participants can work on search problems.

ASSURANCES AND CLAIMS

All three levels of each kit were tested with over 1,000 individuals. Results indicate that the objectives, as stated above, were reached by more than 70 percent of the field test individuals who participated. Revisions were made in the kit based on feedback from field test participants. The kit has not been retested following revision.

THE EVALUATION OF EDUCATIONAL INFORMATION CENTERS: ERIC/TM REPORT 34

An overview of strategies for assessing educational information centers

Educational information centers are agencies which provide a broad range of search, information retrieval, and dissemination services. They are primarily concerned with providing increased and more effective communication of the results of research and development in education and related areas to educational decisionmakers and practitioners. Educational information centers generally are characterized by a heavy reliance on the ERIC (Educational Resources Information Center) data base, supplemented by locally acquired additional materials. Strategies for evaluating these centers can be developed in terms of client needs, information resources, the search and retrieval process, the impact and utilization of information by clients, and cost effectiveness.

SUBJECT AREA(S)

This manuscript discusses program evaluation and information dissemination.

INTENDED USERS AND BENEFICIARIES

The primary beneficiaries are administrators of educational information centers. A secondary audience consists of information dissemination specialists at the State, local, and Federal levels.

GOAL(S) OR PURPOSE(S)

The purpose of this program is to present a basic discussion of the issues and procedures involved in the evaluation of an educational information center.

ASSURANCES AND CLAIMS

The initial manuscript was submitted to a number of measurement experts for review. The authors incorporated these comments and suggestions into a second draft which was reviewed in a similar manner.

1974 DIRECTORY OF RESOURCES IN ADULT EDUCATION

A compendium of adult education associations, periodicals, data bases, and data retrieval systems

This product is a directory of: (1) National adult education associations, (2) adult education periodicals, (3) information systems, (4) information search services, (5) other resources, (6) graduate programs of adult education, and (7) classical adult education source documents.

SUBJECT AREA(S)

Adult and continuing education.

INTENDED USERS AND BENEFICIARIES

The intended users of this product are persons in adult and continuing education.

GOAL(S) OR PURPOSE(S)

The purpose of this product is to give an otherwise highly diverse field a directory of its primary resources.

OPTIONS AND PERSPECTIVES: A SOURCEBOOK OF INNOVATIVE FOREIGN LANGUAGE PROGRAMS IN ACTION, K-12

A survey of 50 successful experiments in foreign language instruction

This 382-page paperbound guide surveys more than 50 successful experiments in foreign language instruction, many validated by followup studies and research-based evaluation. The book presents information on current innovative foreign language projects and programs for grades K to 12. Its intent is to provide information, not to mandate or promote change.

The project entailed the collecting, selecting, organizing, analyzing, and reporting of information. Some programs required extensive coverage; less complex programs were reported in shorter fashion. Long reports are generally organized into sections on such topics as: Overview of the program, program development and present status, target audience, program goals and/or goals for students, student grouping and scheduling arrangements, methodology and representative content, credit and articulation, materials and facilities, roles of teachers and other personnel, training requirements, role of community, program evaluation, funding and costs, adaptability of concept to other places, available descriptions, and contact person.

SUBJECT AREA(S)

Foreign languages (grades K to 12).

INTENDED USERS AND BENEFICIARIES

Individual teachers, schools, and/or school districts; trainers of foreign language teachers, and foreign language coordinators are the intended users.

GOAL(S) OR PURPOSE(S)

The goals are: (1) To provide teachers and other school personnel with sufficiently detailed information about specific programs so as to permit administrators and teachers to decide whether the ideas are adaptable to their own situations, (2) to stimulate administrators and teachers to organize programs of their own design, (3) to provide examples that demonstrate the feasibility of changing foreign language programs, and (4) to provide new ideas for use and adaptation of commercial materials or for creation of one's own materials.

To provide trainers of teachers with: (1) A springboard for methodology courses, (2) a way of making trainees aware of the diversity of approaches to foreign language education, (3) a case study approach to curriculum, (4) a compendium of ways in which some schools solved problems, (5) a source of new ideas for trainees about organizing and finding approaches to foreign language instruction, and (6) a source of case descriptions for practice in evaluating program format and research results.

PATTERNS OF USE

The guide can be used by individuals, small groups, or college classes for reference, training, or as a decisionmaking aid.

ASSURANCES AND CLAIMS

Some words of caution and suggestions are in order for those who wish to consider adapting or adopting programs reported here. Some of the programs have been developed to solve problems; others have been developed through fortuitous circumstances, an outburst of energy, or simply a desire to do something different. Although some programs may have been created to solve given problems, they may in turn have created other problems, or might create similar problems in a different setting unless possible negative effects are anticipated and dealt with. Where the authors were given information on specific problems or fortuitous circumstances, they provided it in the program reports.

It may not be desirable or even feasible simply to duplicate programs. In most cases, adjustments will have to be made in fitting programs into new environments. Most of the programs reported here can be transferred across languages, and some might be transferred across grade levels. In some cases, especially those involving methodology, it would be advantageous to do background reading and even to visit programs. Finally, innovative programs as a rule need much administrative support in their early stages.

HOW TO CONDUCT A SEARCH THROUGH ERIC

An instruction to ERIC resources, including Resources in Education, Current Index to Journals in Education, and the ERIC Thesaurus

This 24-page booklet is the third component in a set of instructional materials related to the purposes, organization, and uses of the Educational Resources Information Center (ERIC). The booklet is designed to instruct the readers in ways of using the comprehensive ERIC indexing system in the search for information or materials relevant to their needs. The reader starts with a specific problem (how to plan a nature center) and, guided by a series of questions and illustrations, progresses through a step-by-step search for documents related to this problem. In the process of completing this search, the readers are introduced to ERIC's three basic research tools—*Research in Education*, *Current Index to Journals in Education*, and *The ERIC Thesaurus*,—and six basic steps in conducting an effective and efficient search. Supplementary information is included to anticipate problems which may be encountered when the readers attempt their own searches for educational information.

SUBJECT AREA(S)

Conducting a search through ERIC.

INTENDED USERS AND BENEFICIARIES

The intended users of this booklet are those in the educational community seeking information for specific needs.

GOAL(S) OR PURPOSE(S)

The purpose of this booklet is to enable readers to use the ERIC indexing system in the search for information or materials relevant to their needs.

LIBRARY AND REFERENCE SKILLS CURRICULUM

A complete library program for students in grades 3-6

Library and Reference Skills Curriculum (LRSC) is a complete library program for students in grades 3-6. LRSC is meant to fill a gap too often found in elementary education. Teachers feel that library and reference skills are skills that their students need to function well in other curriculum areas. Yet, few teachers are able to provide this necessary instruction. LRSC permits the teacher without a library skills background to offer a comprehensive program in library instruction. Schools fortunate enough to have a librarian on their staff can use LRSC to individualize instruction and free the librarian to devote more time to library management and to creative activities such as story hours, book discussions, and student research projects.

LRSC familiarizes students with materials common to all libraries such as fiction, nonfiction, picture books, reference books, and card catalogs. It emphasizes five major skill areas: Using the library, book parts, dictionaries, encyclopedias, and other reference materials. Each of these skill areas is covered by a set of hierarchically arranged behavioral objectives.

Students work through the materials at their own pace. First, diagnostic pretests determine their competence in specific skills areas and place them into the appropriate lesson. When the lesson is completed, posttest data are used to evaluate their mastery of a particular objective. The bulk of the program is comprised of self-instructional booklets supplemented by real and simulated library and reference sources. All booklets are supplemented by answer keys that provide continual and immediate feedback to students.

Application activities serve both to reinforce and to extend the skills taught through the basic instructional materials. The activities offer each student exposure to a variety of interesting materials.

If two 45-minute periods are devoted to LRSC each week, the entire program can be completed in about 2 school years. However, depending on the resources and priorities of an individual school, portions of LRSC can be used to teach only those skills most critical to the immediate needs of students.

SUBJECT AREA(S)

Library skills

The program covers dictionary use (definitions, pronunciation, homonyms, synonyms, pictures and context clues, thesauri); encyclopedia use (locating information); book parts (index, table of contents, bibliography, title page, chapters); and other reference sources (magazines, newspapers, almanacs, atlases).

INTENDED USERS AND BENEFICIARIES

Library and Reference Skills Curriculum (LRSC) was developed for students in grades 3-6 who are reading at or above a 3.0 grade level. There are also indications that the program can be useful to students in grades 7 and 8.

GOAL(S) OR PURPOSE(S)

LRSC has three primary goals: (1) To enable students to function comfortably in any school or public library; (2) to equip students with the library and reference skills they need to function successfully in other curriculum areas, such as English, science, and social studies, and (3) to encourage students to be independent learners who seek out information to further their own learning and interests.

PATTERNS OF USE

LRSC is completely individualized. Students work at their own pace and may work in any skills area provided the level at which they work is appropriate to their needs and abilities and they progress according to the hierarchical instructional objectives.

ASSESSMENT PROVISIONS

Prerequisite to the program is a 3.0 grade level reading comprehension score on any standardized reading test. Students are placed into the appropriate level of instruction according to the results of the entry behavior sequence. Within levels, pretests determine the specific skills on which they should work. Posttests check mastery of skills.

TIME REQUIREMENTS

Two 45-minute to 1-hour periods per week should be devoted to LRSC. The entire curriculum can be completed in four semesters or 2 school years. This, of course, varies; the average student who starts LRSC in the 6th grade will complete the program in less time than an average 3d grader.

IMPLEMENTATION PROCEDURES

Students must have access to a school or other library because the program calls for use of certain reference sources and familiarity with a library. Developers encourage visits to a number of different libraries when possible. Space to store LRSC printed materials is also necessary. Teacher training materials are provided as part of the program.

Summary Cost Information

The total product installation costs and initial annual costs per school (1 class of 35 students in each of grades 3-6) are $1,981. The average continuation cost per individual student is $6, based upon present developer production costs. Commercial publication should reduce these costs. The supplementary books and storage hardware are common items found in most schools; the implementer may already have these materials. Please note that all costs are estimated.

ASSURANCES AND CLAIMS

The LRSC program has undergone extensive developmental evaluation both by the originators, Learning Research and Development Center, and by the later developer, Research for Better Schools, Inc. The developmental sequence at both institutions has been such that all program components have been reviewed in-house, revised, reviewed by "experts" in the field of library science and/or elementary instruction, tried out by component on samples of students from the target population, and tried out as a complete system of instruction. Since the developmental model employed with LRSC is based on a belief in development by successive approximations, the data gathered to date have been of a formative, rather than a summative, variety; that is, these data have been used both to make necessary revisions in the materials and to improve the assumptions and procedures of development.

The assurances offered for LRSC and the claims made about LRSC are based on all these aspects of the developmental sequence. Briefly, the data suggest that the materials developed to date do not affect users negatively, do not perpetuate social biases, are at least as effective as other comparable products, and can be used outside the developmental site with effective results. The LRSC materials not only meet these minimum requirements, but also extend them to the point of providing instructional options for the student who may not like particular materials, countering social bias by increasing the student's exposures and by providing content and instructional strategies not found in more traditional programs.

Assurances

Several hundred students have been exposed to LRSC in its developmental life. In all these experiences, there has been no reported instance of physical, psychological, sociological, or any other type of harm to a student in the program. In all of these experiences there has also been no reported objection to any of the materials with regard to issues of social fairness. Effort at Research for Better Schools, Inc., in fact, has been to counter those instances in the program where there is a potential of bias by a strict adherence to a ratio system of social fairness.

Evaluations of LRSC have not extended beyond the developmental sites. However, extensive testing by the Learning Research and Development Center (Pittsburgh) and Research for Better Schools, Inc. (Philadelphia) on a variety of student samples has generally yielded the same positive result, indicating at least a tendency toward replicability of effectiveness.

Claims

On the basis of information obtained throughout the developmental sequence, the following claims are made:

1. LRSC instruction is based on a set of hierarchically arranged objectives which are presented in such a way as to be self-instructional for students meeting the prerequisites.
2. Valid, criterion-referenced pretests, diagnostic, and mastery tests reliably and accurately assess each student's level of instructional attainment and need.
3. The teacher and student management functions can be carried out easily and efficiently.
4. All LRSC students progress within the program in the school year.
5. Students' pretest-to-posttest change scores show a significant amount of gain on a standardized test of study skills.
6. Students enjoy the materials and are motivated to work more with library materials as a result of exposure to LRSC.
7. Teachers react positively to the LRSC program content and management system.

POSTSECONDARY EDUCATION

1225

OVERVIEW

TERRY HARTLE
Education Policy Research Institute
Washington, D.C.

Postsecondary education: Defining the universe

Postsecondary education is an elusive concept. While to some observers it is the same as "higher education," it is perhaps more instructive to think of postsecondary education as "the whole spectrum of institutions, agencies, and activities that are concerned in some fashion with education beyond the high school level."[1]

Harold Orlans has succinctly identified the underlying current status as opposed to historical philosophy of postsecondary education and some of the reasons for its emergence:

> * * * the declining prestige for higher education following the disruptions of recent years; the rising costs of college and the declining employability of many graduates; the effort to tie the Nation's educational expenditures more closely to its manpower needs; the effort to increase the practical usefulness of advanced education and to dignify vocational education * * * Postsecondary education is an eminently democratic concept that seeks to equate, for purposes of public policy, planning, and student aid, the education of physicians and nurses' aides, of physicists and plumbers, of Ivy League freshmen and 17-year-old high school dropouts who return to school to learn a trade.[2]

In short, such a philosophy recognizes the social and educational contributions made by both traditional higher education and the larger number of business and technical schools the so-called noncollegiate or nontraditional sector of education.

Estimating the elements comprising the postsecondary universe is a difficult task. While it is fairly simple to identify the almost 3,000 institutions in traditional higher education,[3] it is almost impossible to arrive at a consensus on noncollegiate (or proprietary) institutions. Estimates in this realm are complicated by the high turnover of institutions, the question of including avocational schools, and whether the educational programs of groups such as industry, churches, and labor unions should be counted in the total. Thus, the total institutions in the noncollegiate sector are estimated at between 7,000 and 35,000 schools. While most of this overview centers around traditional higher education, it should be noted that public policy is increasingly recognizing the contribution and role that nontraditional schools play in our society. Increasingly, statewide planning studies and inventories of postsecondary education resources include information and recommendations for nontraditional as well as traditional postsecondary education. Thus, we may expect that this public recognition and broadening of the postsecondary universe will continue.

Dr. Terry Hartle is a Research Associate in Public Administration and Intergovernmental Relations at the Education Policy Research Institute, a Washington, D.C.-based division of the Educational Testing Service.

Intergovernmental and fiscal division of responsibility

The Federal interest in traditional higher education predates the Constitution with the Northwest Ordinance of 1785. Over the years, the Federal role has expanded significantly through such landmark legislation as the Morrill Acts of 1861 and 1890, the GI bill, the National Defense Education Act, the Higher Education Act of 1965 and the amendments of 1972, and the steadily increasing support for research and development after the Second World War. Most of this expansion, however, has been in dollar terms, for the traditional responsibilities have remained quite stable. The States have the basic responsibility for maintaining the system and the Federal Government supports those activities which are truly national in character and transcend the needs of a given State or region. Ernest Boyer, chancellor of the State University of New York, suggests more specifically the major Federal obligations:

1. Assure equality of access.
2. Support research and graduate education.
3. Support high priority professional fields of study (e.g., medicine).
4. Stimulate educational and managerial reform.[4]

(For a more detailed examination of the intergovernmental division of responsibilities, refer to John Honey and Terry Hartle, *Federal-State-Institutional Relations in Postsecondary Education*, Princeton: Educational Testing Service, 1975.)

Clearly, support for higher education has become a partnership between the Federal Government and the States. While most of those connected with higher education know that Federal support in the decade of the sixties increased significantly, few realize that State increases were even more pronounced.[5]

POSTSECONDARY EDUCATION

Current issues

Around 1969 it became clear that the rapid-growth years were over and that financial austerity would become the way of life for higher education. Studies by Cheit, Jenny and Wynn, and Jellema demonstrated the presence and likely impact of the worsening financial conditions on higher education. The realization that growth was limited added special meaning to the six major reports prepared by eminent national groups in the early years of the 1970's: The Carnegie Commission, the Committee for Economic Development, the National Board on Graduate Education, the National Commission on the Financing of Postsecondary Education, the National Council of Independent Colleges and Universities, and the Special Task Force of Health, Education and Welfare chaired by Frank Newman. While these groups dealt with a vast range of issues, it is possible to identify three general concerns which all the reports addressed: Student aid, management concerns, and financing. Although the focus may have changed somewhat, these three concerns remain near the center of public debate and interest today.

Student aid. There is considerable interest in the complex student-aid menu. The Federal Government currently provides funds for postsecondary education through six separate programs, all authorized through Title IV of the Higher Education Act of 1965. These programs are: The National Direct Student Loan, the College Work Study, the Supplemental Educational Opportunity Grants, the Guaranteed Student Loans, the Basic Educational Opportunity Grants, and the State Supplemental Incentive Grants. A primary concern today centers around the distribution of student aid: Should the money go directly to the student or should it be allocated to institutions and then be distributed to the individual. This argument was settled to some extent by the creation of the Basic Education Opportunity Grant (BEOG) program in 1972 which entitled each student to $1,400 less the amount his or her family could be expected to contribute. Yet, while most higher education representatives now recognize the BEOG as the primary student-aid program, Federal appropriations to this program are limited by a provision that $563 million be spent on other student-aid programs before any money is spent on the BEOG. Considerable research needs to be done on the impact of the title IV provisions on States, institutions, and their students. Likely areas for further investigation also include: The provision of adequate information to States and institutions so they can carry out their own planning coordination activities, the impact of Federal-aid policies on State student-aid programs, and the impact of such an array of programs (with several separate applications) on potential students. Additionally, careful research must be done on the specific problems of the individual programs. For example, what can be done to correct the high default rate of the Guaranteed Student Loan? Since the student-aid legislation expires in this session of Congress, any research carried on in this area will be very timely.

Federal regulations/accountability. Many of the management issues identified in the previously cited reports centered on improving the efficiency of higher education. In the past year, however, the concern has focused on the increasing costs imposed on colleges and universities to comply with Federal social programs. In one sense it is ironic that universities that encouraged new social programs are now haunted by them. This does not, of course, make the costs of compliance any less onerous. The Federal regulations have created, in Earl Cheit's words, "a new purgatory, right here on earth."

The costs of compliance are, by all measures, substantial. A recent study by the American Council on Education[6] illustrated the large increase in compliance costs over the past 10 years:

Type of institution:	1965	1975
Large public	$438,000	$1,300,000
Medium private	2,000	300,000
Large private	110,000	3,600,000

Change magazine has estimated the nationwide cost at $2 billion—or almost the equivalent of philanthropic contributions in 1972. Because this issue is so new, little research has been undertaken to identify more specifically the costs imposed on universities and alternatives to such comprehensive requirements. Clearly more research is needed.

In a sense, this concern with compliance is part of a large concern that institutions of postsecondary education be accountable to both their students and the general public. While not a new issue, the interest in accountability surfaced as a priority recently in light of several student suits against postsecondary institutions charging that the colleges failed to deliver what they promised.[7] There is a long history of such lawsuits; however, until recently they were most frequently brought against proprietary schools. They have now begun to affect traditional higher education institutions as well. These lawsuits have not been very successful so far since the charges—usually fraud, negligence, and breach of contract—are difficult to prove, especially against universities. This does not mean, however, that universities need not concern themselves with being accountable. Some institutions have made significant responses to the demands for accountability. A summary of these trends can be found in the National Center for Higher Education Management report, "Accountability in Higher Education, Report No. 1." More research into the questions posed by "consumer suits" needs to be undertaken, however, since the demands for accountability seem to be mounting.

Public financing of higher education.—In the past 5 years, it has become clear that higher education growth rates are slowing as fast as they formerly accelerated. The first evidence of this change was financial: Costs began to outstrip income. Then a slowing of the enrollment rates (with evidence suggesting a future decline) became apparent. Although there are little data to help assess the relative importance of the individual factors that influenced the enrollment decline, the Carnegie Commission identified four significant factors:

1. The abolition of the draft;
2. The rising costs of college attendance that have been

---

[6] "The High Costs of Compliance" by Jack Magarrell, *The Chronicle of Higher Education*, July 21, 1975, p. 1.

[7] "Students Filing Consumer Suits" by Philip Semasi, *The Chronicle of Higher Education*, p. 1, November 24, 1975.

associated with accelerated inflation rates and accompanying increases in tuition and other college charges.

3. The changes in the job market for college graduates; and
4. Liberalization of college rules to permit deferred admissions and "stopping out" of students in the midst of college careers.[8]

While all higher education institutions suffer the pains of limited growth (the so-called "steady state" condition), the impact is most seriously felt at private institutions that, on the average, receive 66 percent of their operating income from tuition payments by students. Yet while there is a growing realization that private higher education faces financial distress, there is little agreement about the causes of the distress, its severity, or what should be done to correct it.

Despite the predictions of impending doom, recent studies suggest that the financial situation is not as dire as some believe. A recent study by Howard Bowen and John Minter found private higher education "in basically good condition" although 27 percent of the private institutions were in "serious trouble with ultimate survival in doubt." Some of the study's findings reported in *The Chronicle of Higher Education* included: Enrollment up 8 percent since 1969-70, little evidence of financial retrenchment, and revenues (after correcting for inflation and enrollment) had increased slightly since 1970. This report is to be the first in a series of yearly examinations by the Association of American Colleges which will provide valuable time-series data for measuring the health of private institutions.[9]

It is reassuring to learn that the financial situation has not yet reached crisis level, but there is a danger that some individuals will see such studies as proof that the "good old days" of the sixties have returned. Such a viewpoint is, of course, completely misguided. The simple fact remains that there were 3.1 million children born in 1961, compared with 4.3 million in 1951. Such a change in the birth rates will, by 1980, have a very pronounced impact on higher education.

Institutional response to financial distress has, to date, been largely restricted to deferring maintenance, restricting hiring, and holding back on salary increases. While such measures are a necessary first step, there are limits to the saving they can generate. Clearly, public funds will be needed if private higher education is to be preserved as it currently exists.

At least four basic public policy options are identifiable: (1) No public involvement—let the market run its course, (2) alter the tax laws to encourage philanthropy, (3) State aid to private institutions; and (4) Federal aid. Considerable research must be done to identify more specifically the policy options that do exist and the pros and cons of each. Hopefully, such research will be initiated promptly so constructive debate can begin before the financial situation reaches crisis levels.

NIE postsecondary education activities

The National Institute of Education has sponsored two types of products to aid the administrators and educators of postsecondary education in understanding and responding to changing student needs and interests and expanding accountability requirements. The first type of product is the comprehensive management and budgeting system developed by the National Center for Higher Education Management. This system provides postsecondary administrators at the State and local levels with the computer software and documentation required to implement a program budgeting system. Manuals accompanying the system provide guidance in selecting and collecting measures of productivity in a university setting, allocating faculty salaries among departments, and predicting the flow of students among academic departments.

The second type of product is resource materials designed to aid the postsecondary practitioner in keeping abreast of innovations in administration, finance, and instruction. Examples of such products are the reports jointly produced by the ERIC Clearinghouse on Higher Education and the American Association for Higher Education. Report topics include: *Higher Education and the Steady State; State Aid to Private Higher Education, Report No. 3;* and *Strategies for Improving College Teaching, Report No. 8.*

STATE POSTSECONDARY EDUCATION PLANNING MODEL (SPEPM)

A computerized State planning model to assess the impact of alternative financing plans on postsecondary education

The State planning model is intended to assist, with the use of a computer, those involved in postsecondary planning and management by providing estimates of the impact of alternative financing plans on postsecondary education institutions and students. More specifically, there are three intentions:

1. To develop the capability to assess the effects on both students and institutions of several simultaneous changes in policies pertaining to the conduct of postsecondary education at the State level—policies dealing with such factors as tuition levels, appropriations, and student aid.
2. To further the development and installation of tools to assist planning of postsecondary education resource use adaptable to the needs of individual States;
3. To provide analytic insight into the impact of alternative financing plans on education by estimating the responses of institutions and students.

SUBJECT AREA(S)

Postsecondary education planning and management are the subject areas of this document.

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators are the intended product users.

GOAL(S) OR PURPOSE(S)

The objective of this product is to assist State-level planners and decisionmakers in assessing the impacts of alternative financing plans and resource allocations on students and institutions to determine which combination of resources would best achieve desired goals.

IMPLEMENTATION PROCEDURES

The computer software supporting this product is now available in pilot test version only. The final software should be available in spring 1976.

ASSURANCES AND CLAIMS

The *State Postsecondary Education Planning Model Software System* has been prepared to provide information on the operation of the second version of the *State Postsecondary Education Planning Model* (SPEPM), replacing the previous version of the operating instructions (*SPEPM Software System*, December 1974). In its current state, the document, as prepared by the National Center for Higher Education Management Systems (NCHEMS) staff, is a preliminary draft only and has not been reviewed by the NCHEMS advisory structure.

The original version was reviewed by technical representatives from the SPEPM pilot test States (Colorado, Maryland, Massachusetts, and New York), and their comments were utilized in the development of this version. A second preliminary version of the NCHEMS *State Postsecondary Education Planning Model* has been developed and is operational on the University of Colorado CDC 6400 computer system. This software document describes the operating guidelines and instructions with sufficient examples to permit the use of the model by users in the pilot test States.

The *State Postsecondary Education Planning Model Software System* will be distributed to and reviewed by the participating pilot test States, technical consultants, selected reviewers, and members of the NCHEMS board of directors. Based on the reviews, revisions will be made by issuing replacement pages to all the users of the SPEPM. To insure that this document is maintained with the most up-to-date pages, the SPEPM users receiving this document are requested to order new copies of the document from NCHEMS (rather than duplicating the document itself) so that an accurate distribution list can be maintained for updating the document and to make sure the replacement page index corresponds to the pages in the document. It is intended that this document (with the appropriate revision pages) be used through the pilot test of the SPEPM (fall 1975).

The *SPEPM Software System* should be used with the *Preliminary Framework for the State Postsecondary Education Planning Model*. The user is cautioned that this version of the model has not been fully tested and will not have been fully tested under this release version. The user is also cautioned that this State-level tool has a similarity to any desk top calculator in that it is extremely flexible in the way it can be used to add, subtract, multiply, and divide higher education data. The caution is not so much tied to the model's flexibility, but to the fact that such flexibility can be misused by an inexperienced analyst to produce reports that are just as incorrect as if that same analyst had made the same calculations on a desk calculator. Yet, it is this flexibility to incorporate different planning designs for different policy questions or different conditions that makes the SPEPM a potentially useful tool to many planners and managers in postsecondary education.

INFORMATION CURRENT AS OF APRIL 1975 ■

EXAMINATION OF POSSIBLE STATEWIDE APPLICATIONS AND EXTENSIONS OF THE NCHEMS PROGRAM CLASSIFICATION STRUCTURE

An outline of a State-level information structure incorporating the National Center for Higher Education Management Program Classification Structure

The primary purpose of this document is to suggest to State postsecondary education agencies and other organizations concerned with postsecondary education planning and management a possible State-level information structure that incorporates the National Center for Higher Education Management Systems (NCHEMS) Program Classification Structure (PCS). It provides some specific suggestions concerning how such agencies might aggregate institutional data presented in PCS format for various purposes, and, in this context, touches on the sensitive question of the level of detail at which data are required for statewide planning and management efforts. It should not be construed as a statement of policy by NCHEMS regarding either the necessity or desirability of using the PCS as a portion of a State-level information structure.

Readers are encouraged to consider the suggestions in this document as examples of the kinds of things that might be done. The specific solutions chosen by individual organizations should be developed after careful consideration of the problems that must be dealt with and the circumstances that surround them. Ideally, all the institutions and agencies involved and affected by such a structure should be involved in the developmental process.

The definitions of institutional characteristics included in the section entitled "Institutional Characteristics of Possible Interest at the State Level" coincide with definitions currently provided in the NCHEMS *Statewide Measures Inventory*. In all cases, this inventory, which will be updated as appropriate in the future, is the authoritative source for the definitions.

SUBJECT AREA(S)

The subject area is postsecondary education planning and management.

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators are the intended users.

GOAL(S) OR PURPOSE(S)

The objective of this product is to assist organizations and agencies concerned with postsecondary education in the development of improved procedures and tools for resource allocation and management and in the development of procedures that facilitate the exchange of comparable data among these institutions and agencies.

IMPLEMENTATION PROCEDURES

Late in 1974, a State-level information-base project was initiated which will build on the foundations developed in this document.

ASSURANCES AND CLAIMS

Readers are encouraged to consider the suggestions in this document as examples of the kinds of things that might be done. The specific solutions chosen by individual organizations should be developed after careful consideration of the problems that must be dealt with and the circumstances that surround them. Ideally, all the institutions and agencies involved and affected by such a structure should be a part of the development process.

The definitions of institutional characteristics included in the section entitled "Institutional Characteristics of Possible Interest at the State Level" coincide with definitions currently provided in the NCHEMS *Statewide Measures Inventory*. In all cases, the inventory, which will be updated as appropriate in the future, is the authoritative source for the definitions.

The document presents not only several possible applications, but also many of the consequences and implications that should be considered.

INFORMATION EXCHANGE PROCEDURES (IEP)

*A set of recommendations and guidelines for
collecting, reorganizing, and displaying
educational planning data*

Information Exchange Procedures (IEP) is a set of recommendations and guidelines for collecting, reorganizing, and displaying:

(1) General descriptive and supporting institutional data;

(2) Direct cost for all IEP activity centers and direct cost by unit of instruction (for course levels within disciplines and student levels within student programs);

(3) Full cost for IEP-defined "final cost objectives" and full cost by unit of instruction (for course levels within disciplines and student levels within student programs);

(4) Outcomes of student programs.

A fundamental purpose of the NCHEMS *Information Exchange Procedures* is to assist postsecondary education institutions in establishing a basic set of data useful for the improvement of educational planning and management. This purpose is pursued through IEP in two ways: (1) By helping the institution to create its own internally useful data set and (2) by fostering the creation and exchange of comparable data sets among similar institutions—the simple premise being that institutions may learn from each other.

One of the initial objectives of IEP was to establish a methodology for developing and exchanging information on educational costs, and thus a substantial portion of IEP documentation has addressed the issues and procedures associated with cost calculation. An additional objective was the development of a broader data set, one composed of more than cost information alone. This development was subject to two general guidelines: (1) The information included in IEP should help users to understand better the activities and programs of the institution, and (2) the information included in IEP should encourage institutions to perform analyses that will help in the evaluation and improvement of programs.

The resulting IEP basic data set consists of information of each of the following types: institutional characteristics, student enrollments and characteristics, personnel resources, other resources, institutional finances, costs by instructional discipline and student program, and student outcomes.

SUBJECT AREA(S)

Postsecondary education planning and management

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators

GOAL(S) OR PURPOSE(S)

To lend additional insight into the planning and management functions of postsecondary education through use of information and comparative analysis.

IMPLEMENTATION PROCEDURES

For full implementation of this product, computer access would be necessary.

ASSURANCES AND CLAIMS

Information Exchange Procedures (IEP) is a set of standard definitions and procedures for collecting information about disciplines and student degree programs, outcomes of instructional programs, and general institutional characteristics. These definitions and procedures have been developed to facilitate exchange of information among postsecondary education institutions, providing them with some assurance that data they exchange are useful for purposes of comparison.

The procedures were developed by the NCHEMS staff with guidance from a task force and steering committee, composed of institutional and State agency representatives. *Information Exchange Procedures* and related computer software (the NCHEMS *Costing and Data Management System*) were pilot tested in about 40 institutions during 1974 and 1975. Based on the results of this pilot test and continuing developmental work, both the procedures and the computer software have been modified. During 1975 (and continuing into early 1976), over 200 institutions will begin using these improved products.

The procedures described in these manuals have been reviewed and approved by IEP advisory groups and the NCHEMS board of directors, and released for wide-scale implementation. While IEP is intended to be a final product, wide-scale implementation may point to additional information needs of institutions that can be addressed in updates to this manual if necessary. However, NCHEMS feels that IEP is sufficiently refined at this time that it can be released to institutions interested in implementing IEP.

The procedures and definitions recommended are "targets" for institutions. While it is anticipated that most institutions will be able to follow these recommendations, some institutions may not have available the required information and others may be able to provide it only at an unreasonable cost. Others may find that only after several years of using IEP can data be developed that accurately reflect the characteristics of the institutions. For some institutions the definitions and procedures may be too complex; others may find them too simplistic. Any effort at exchange of data among institutions involves some compromise in an attempt to accommodate the wide variation among institutions. Consequently, while comparable information for exchange is the goal of IEP, NCHEMS cannot guarantee absolute comparability of data as the final result of IEP. But, hopefully, implementation of IEP will represent reasonable progress toward that goal.

A REFERENCE GUIDE TO POSTSECONDARY EDUCATION DATA SOURCES

A summary of publications, articles, and data bases containing data items used in the NCHEMS educational planning systems

A Reference Guide to Postsecondary Education Data Sources identifies and describes publications, articles, and data bases that contain data related to most of the items of information identified in the National Center for Higher Education Management Systems (NCHEMS) *Statewide Measures Inventory* (Allman, Wing, and McLaughlin, 1975). This document does not contain the actual data, but it does describe and reference various sources in which the data can be found. In addition, it provides information about: (1) How the data are organized (e.g., item-by-item, in tables, by chapters); (2) the kinds of information given (e.g., data on personal income, number of high school graduates, enrollments in postsecondary education institutions); (3) the level of aggregation (e.g., by region, State, postsecondary education institution); (4) the years for which data are available; and (5) those measures in the *Statewide Measures Inventory* which correspond to the data referenced.

This product has been developed as a companion to the NCHEMS *Statewide Measures Inventory* with the objective of assisting individuals in the identification of available data sources that can be related to postsecondary education planning and decisionmaking in the United States. Although the primary target audience is State-level postsecondary education planners and decisionmakers, the data corresponding to the items of information in *Statewide Measures Inventory* are of sufficiently general interest that the reference guide should also be useful to researchers, planners, and decisionmakers at the institutional, local, and national levels.

SUBJECT AREA(S)

Postsecondary education planning and management are the subject areas.

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators are the intended users.

GOAL(S) OR PURPOSE(S)

The goal of this product is to assist individuals in the identification of available sources of data that can be related to postsecondary education planning and decisionmaking in the United States.

ASSURANCES AND CLAIMS

Two criteria have been applied to determine whether a data source should be included in this document:

(1) The information in the data source must be national in scope, covering a majority of the 50 States, with State-by-State aggregations of data.

(2) The data must be applicable to at least one measure in *Statewide Resources Inventory*.

These criteria were chosen because of the magnitude of postsecondary education-related data collected in the United States.

Limitations of the reference guide can be grouped into three major categories: The literature search, the level of detail used for the data source descriptions, and the criteria used for inclusion.

Data sources described in the reference guide may not reflect the most recent publications in a series. In these cases, the referenced documents should be used as examples of the kinds of data published in the series. In addition, omissions of data sources which meet the criteria specified for inclusion can be attributed to an incomplete literature search and/or shortages of necessary resources.

No attempts have been made to determine the methodologies used by the various data providers in their data collection efforts. The modes of inquiry, the sizes and types of universes and samples under consideration, and the units of inquiry have not been specified. Also, no assessments of data attributes have been made. Potential users of the data identified will have to make their own quality checks on the data.

Publications related to data collected by individual States and groups of States that were not collected in a comparable fashion for the majority of other States, data collected by individual postsecondary education institutions that are not collected by all institutions in the majority of States, and data that are not reported on a State-by-State basis are generally not included. These areas were neglected because of the large amount of data potentially available and the unwieldy nature of a document that would address all these data sources.

Statewide Measures Inventory has been used as a subject classification scheme for the data sources identified. One limitation of this classification scheme is that measure numbers and names may not imply the full range of the kinds of data that might be related to them. In addition, some of the relationships between the data and the measures were not as clear cut as could be desired, and subjective decisions regarding where the data should be referenced in section 1 had to be made.

POSTSECONDARY EDUCATION INSTITUTIONAL DATA USE PROCEDURES MANUAL

A guide for interpretation and use of institutional and student data

The manual supports both an institution's interpretation and use of its own *Information Exchange Procedures (IEP)* data, as well as comparative analysis and use of multi-institutional *IEP* data.

The document will contain a set of recommended procedures and display formats to aid in the descriptive analysis, interpretation of the results of that analysis, and utilization of the results in planning and management.

Examples of the content and approach of this document are:

1. Descriptive narratives of the overall institution and its student programs, designed to communicate the relevant content of the *IEP* data base, particularly to the nontechnical user;
2. Detailed profiles of student programs, disciplines, departments, and other organizational units, designed to amass in one place all the information exchange procedure *(IEP)* data about the particular unit being examined;
3. Data used in analytical studies to address issues of particular concern in a tighter research mode. The three issues illustrated here are (a) the description and analysis of costs and cost differences across disciplines and student programs; (b) the examination of student outcomes and their differences across student programs and other student subpopulations; and (c) the documentation and analysis of trends over time in costs, student outcomes, and enrollment patterns.

For each kind of data presentation, procedures will be given for obtaining the necessary information. General comments and guidelines will be given for the user's interpretation of the data in each form, including particular attention to data limitations. Each type of data will be accompanied by a list of specific planning and management activities that are felt to be especially useful.

It is hoped that actual results of analysis conducted through this product will provide some of the building blocks necessary to develop progressively more sophisticated data use and analysis products.

SUBJECT AREA(S)

Postsecondary education planning and management are the subject areas.

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators are the intended users and beneficiaries.

GOAL(S) OR PURPOSE(S)

The goals of this product are to delineate planning and management uses of existing data bases and to improve institutional capability to utilize data in planning and management. Particular emphasis will be placed upon facilitating institutional interpretation and use of the *Information Exchange Procedures* (IEP) data set.

ASSURANCES AND CLAIMS

This product is being developed with the advice of a 12-member task force. In addition, the document will undergo extensive review by an outside committee and by the National Center for Higher Education Management Systems (NCHEMS) staff. Pilot testing will be done from summer 1975 to spring 1976.

DEVELOPER/AUTHOR:

National Center for Higher Education Management Systems at the Western Interstate Commission for Higher Education
P.O. Drawer P
Boulder, Colo. 80302

AVAILABILITY

The document will be available in field review edition in summer 1975 from:

Boulder, Colo. 80302

INFORMATION CURRENT AS OF APRIL 1975 ■

STATEWIDE MEASURES INVENTORY

Information on statewide postsecondary education planning and management

This product consists of a list of items of information, along with concise definitions and other information of interest, relevant to statewide postsecondary education planning and management. It has been designed primarily as a working document for use by State-level postsecondary education planners and decisionmakers. The primary objective of the inventory is to improve and simplify communication through increased standardization of terminology and usage. Secondary objectives are to provide assistance to those concerned with developing and designing data bases and information systems, and to suggest ways that statewide planning and decisionmaking might be improved through the identification of problems and issues to which the measures in the inventory are relevant.

In developing definitions for many of the measures and glossary items in the inventory, the staff has drawn heavily on past and present efforts of organizations other than the National Center for Higher Education Management Systems (NCHEMS) as well as other NCHEMS projects. Considerable time and effort have been devoted to insuring that the definitions of terms (whether they be measures or glossary terms) included in this inventory are compatible with those used in other NCHEMS efforts. This does not mean that the definitions are identical, but it does mean that at the time of the publication of this document they are substantively the same.

Although the product was developed in the context of statewide planning and decisionmaking, it may prove valuable to institutional and national planners and decisionmakers as well. To the extent that their concerns coincide with those that are important for State-level planners and decisionmakers, they should find it a valuable reference document.

It should be emphasized that the inventory is not by itself a useful planning and management tool. It does provide a start toward the standardization of terminology for postsecondary education planning and management, and it suggests ways of linking this terminology to a variety of general statewide concerns. However, with respect to the tasks of analyzing specific statewide problems and issues and developing operational information systems, the inventory is at best a point of departure or frame of reference.

SUBJECT AREA(S)

Postsecondary education planning and management are the subject areas.

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators are the intended users.

GOAL(S) OR PURPOSE(S)

The purposes of this product are to identify and define those measures and items of information which are required for statewide planning and decisionmaking purposes.

ASSURANCES AND CLAIMS

To insure that all measures under consideration for inclusion in the product were treated systematically and consistently, specific criteria for including items were identified early in the project. These criteria provide relatively concrete guidelines for determining whether an item currently in the inventory ought to be dropped. In a sense, they define the objectives of the inventory. Two major criteria were identified:

(1) The statewide measures project will focus on the identification of descriptors or measures relevant to State-level postsecondary education planning and management.

(2) Only measures that are or would be useful to State-level agencies in most States should be included in the inventory.

Four secondary criteria or guidelines were also established:

(1) Measures and data elements suggested by other NCHEMS products and projects shall be considered for inclusion in the inventory.

(2) Wherever institutional data are required to compute or develop a statewide measure, the procedure should call for an aggregation of existing institutional data elements as defined in the *Data Element Dictionary*.

(3) Data elements relevant to all sectors of postsecondary education will be included to the extent possible.

(4) The feasibility of collecting the data will be considered when deciding whether to include specific measures. If it is clearly infeasible to collect data for a particular measure, the measure usually will be omitted from the inventory.

Relevance to statewide planning and management has been the most important criterion, primarily because the task force and staff were concerned that the project should not become involved unnecessarily in matters that do not or should not concern it. In some cases it was difficult to apply this criterion precisely, usually because of differences in actual practices in State agencies across the country and differences in the perceptions of the task-force members. In such situations, the task force usually opted to include the item, particularly when a clear-cut definition for the measure was available.

POSTSECONDARY EDUCATION OUTCOMES MEASURES AND PROCEDURES MANUAL

A manual which suggests the definitions and
data-acquisition procedures necessary for
collecting top-priority outcome measures

Most decisionmakers concerned with postsecondary education today have recognized that for the planning and management process to be effective, it not only must be based on information about inputs, activities, and costs, but also must take into consideration information about the outcomes or results of educational programs. While these decisionmakers have acquired this awareness, they are equally aware of the complexity of the problems associated with identifying and measuring the outcomes of postsecondary education and then using this information for planning, management, and accountability purposes.

This outcomes product rests on the premise that three needs must be met if outcomes information is to be effectively incorporated in postsecondary education planning and management:

1. The need to provide a comprehensive picture of the outcomes of postsecondary education and to develop the capability to measure them;
2. The need to provide a structure for organizing outcomes information as a prerequisite for analysis and communication;
3. The need to develop analytic procedures for applying this information to particular planning and management problems.

This product develops the definitions and data acquisition procedures necessary for collecting the top-priority outcomes measures.

SUBJECT AREA(S)

Postsecondary education planning and management are the subject areas.

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators are the intended users.

GOAL(S) OR PURPOSE(S)

The purposes of this program are to develop communication, analytical tools, and procedures for identifying, measuring, and analyzing the outcomes of postsecondary education and to assist decisionmakers in using outcomes information in their planning and management activities.

ASSURANCES AND CLAIMS

The *Outcomes Measures and Procedures Manual* presents alternative procedures for acquiring a select number of postsecondary education outcomes measures (indicators), which have been identified by a wide range of college administrators and State-level decisionmakers as being of high importance for helping provide the outcomes information needed to carry out their decisionmaking responsibilities. While the manual is intended as a practical and flexible guide that can be used by a rather broad audience, it is specifically aimed at those persons involved in educational planning, institutional research, and program evaluation.

Five major guidelines have been followed in the development of the manual:

1. The manual should, to the extent possible, bridge the full range of postsecondary education outcomes measures. That is, measures of the outcomes of the instructional, research, community service, and institutional support programs associated with the various types of postsecondary institutions should be considered for possible inclusion in the manual.
2. The outcomes measures considered for inclusion in the manual should reflect the fact that postsecondary education outcomes occur over an extended time period. Therefore, the manual should consider measures of both short-term and long-term outcomes.
3. The outcomes measures and their corresponding acquisition procedures should reflect a recognition that the information needed by different decisionmakers varies considerably as to when it is needed and at which level of detail.
4. The initial version of the manual should be primarily a compilation of the current state-of-the-art capability with respect to feasibility of outcomes data collection. Further versions will incorporate improved and newly developed outcomes data acquisition procedures.
5. The manual should be a "flexible tool" from which users can choose the data acquisition procedures that are appropriate for deriving the outcomes measures they need.

The outcomes measures and data acquisition procedures contained in this version of the manual were developed in two phases. Phase 1 was concerned with the identification of those outcomes measures most needed by postsecondary education decisionmakers. Recognizing that the National Center for Higher Education Management Systems (NCHEMS) current constituency was composed primarily of institutional and State-level decisionmakers, the following types of decisionmakers were surveyed to determine the outcomes measures which they believed would help provide the outcomes information they needed:

1. Administrators from community colleges, public and private 4-year colleges, and public and private universities;

2. State directors of higher education and community/junior college governing boards and coordinating councils;

3. State legislators who chair legislative committees concerned with education and appropriations. Mailed questionnaires were used in the survey to solicit the responses of the different decisionmakers in the sample. The lists of outcomes measures included in the survey questionnaires were taken from NCHEMS' *Inventory of Higher Education Outcomes Variables and Measures* (NCHEMS, Micek and Wallhaus, 1973).

Phase 2 was designed to develop the definitions and data acquisition procedures necessary for collecting the top-priority outcomes measures delineated as a result of phase 1. Major activities in this second phase included a synthesis of existing procedures being used by institutions or individual researchers to acquire outcomes information and the conduct of special workshops to supplement staff efforts in the development of improved and new outcomes measures and data acquisition procedures.

The field review edition of the manual was published in 1974 to solicit potential user comments and suggestions regarding its organization, content, and overall utility. The review of the manual will also consist of an extensive pilot test to assess the feasibility and usefulness of the outcomes measures and acquisition procedures contained herein. The results of this review process will be used to improve upon the manual, which will be published as a "first edition" in 1976.

PROGRAM MEASURES

A system for organizing information about postsecondary education

Program Measures has been developed to aid instruction of users of the National Center for Higher Education Management Systems (NCHEMS) program classification structure by providing the categories of information that describe program elements. This document also provides some alternative suggestions for structuring information for analysis purposes.

This technical report identifies, describes, and categorizes quantitative indicators into six program measures groups that provide information about each program classification structure (PCS) program element as follows:

1. Resource measures provide data on the personnel involved, the facilities and equipment utilized, and the supplies and services consumed.
2. Financial measures indicate the funds obtained from various sources; the capital investment expenditures incurred for land, buildings, and equipment; and the operating expenditures for personnel, supplies, and services.
3. Beneficiary group measures describe the groups of people who benefited.
4. Target group measures identify the people toward whom, or places/things at which, the activities of the the program element were directed.
5. Activity measures describe the types and levels of activities conducted.
6. Outcome measures indicate the outcomes or products generated as a result of the activities of the program element.

In addition to specifically attaching the *Program Measures* to the PCS, this document includes a discussion on alternative ways of structuring information for analysis. The discussion is meant to promote a speculative note regarding the further development and use of structures and measures in analyzing information for the planning and management of higher education.

SUBJECT AREA(S)

Postsecondary education planning and management are the subject areas.

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators are the intended users.

GOAL(S) OR PURPOSE(S)

The major objective of this document is to identify and categorize program measures. Specifically, the document attempts to identify, describe, and categorize that information which describes the program elements at each level within *Program Measures*. Also, to allow for flexibility in the structuring of information for analysis purposes, alternative schemes of categorizing information are presented.

ASSURANCES AND CLAIMS

Program Measures is intended to aid institutional users of the NCHEMS product by providing the categories of information that describe program elements. This document also provides some alternative suggestions for structuring information for analysis purposes. However, it should not be construed as a manual that describes standardized procedures for conducting analyses; neither is it specifically addressed to program budgeting systems. It is cautioned that the use of *Program Measures* with the PCS does not necessarily assure comparable information.

REVISION OF THE PROGRAM CLASSIFICATION STRUCTURE

An update of the 1972 program classification guide providing a more easily implemented system for organizing information and postsecondary education

This product is a *Revision of the Program Classification Structure* (PCS) (National Center for Higher Education Management Systems (NCHEMS), Gulko, 1972) to make it easier to implement and more useful to institutions, States, and Federal agencies. The PCS is basically a standard scheme for organizing information (or measures) about postsecondary education.

SUBJECT AREA(S)

Postsecondary education planning and management are the subject areas.

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators are the intended users.

GOAL(S) OR PURPOSE(S)

The goal of this program is to make the program classification structure easier to implement and more useful to institutions, States, and Federal agencies.

MATERIALS AND EQUIPMENT

To be determined in late 1975.

ASSURANCES AND CLAIMS

The proposed modifications were summarized in a paper entitled "Revisions of the Program Classification Structure" (Collier and Young, 1974), which was distributed to the entire National Center for Higher Education Management Systems (NCHEMS) mailing list for comment and review. This paper also was the major topic of discussion at the participant advisory assembly held in St. Louis in November 1974. Based on these review procedures, the staff made its final recommendations to the NCHEMS Board of Directors.

INFORMATION CURRENT AS OF APRIL 1975 ■

RESOURCE REQUIREMENTS PREDICTION MODEL (RRPM) 1.6

An instructional cost simulation model for all types of postsecondary institutions

The *Resource Requirements Prediction Model 1.6* (RRPM 1.6) is an instructional cost-simulation model for use in all types of postsecondary institutions including community colleges, vocational schools, and large and small 4-year institutions with or without major research activities.

RRPM 1.6 provides institutions with a tool with which to analyze various institutional alternatives for the utilization of a limited set of resources. It may also provide a useful point of departure for those institutions wishing to adapt a cost-simulation model to their own specific institutional needs.

RRPM 1.6 generates information necessary for the preparation of instructional program budgets. Institutional data, either historical or projected, may be put into the model. The model then calculates the program cost information and implied resource requirements to undertake any given series of programs.

The product generates four different types of reports, any or all of which may be requested by the user. These are: (1) Organizational unit reports providing line-item budgets for various organizational units within the institution, (2) program budget reports indicating the discipline or department contributions to various instructional programs, (3) institutional summary reports, and (4) formatted display reports that show all parameter data for the institution.

The starting point for implementation of RRPM is the Induced Course Load Matrix (ICLM), which describes the relationship between disciplines or departments and students in degree programs. Computer programs that construct the ICLM from institutional files are available from the National Center for Higher Education Management Systems (NCHEMS). Additional RRPM data requirements center around faculty-related information. NCHEMS has developed a computer program series called the Faculty Data Generator, which produces required faculty data from institutional files.

In addition to its utility as a historical model, RRPM can be used for interinstitutional historical cost comparison and exchange. If compatible exchange is desired, each participating institution must adhere to strictly defined procedures and definitions. These include definition of primary and support cost centers, definition of what comprises direct and indirect costs, definition of an FTE student, and definition of allocation techniques. Given agreement on these matters, RRPM will produce compatible unit costs by level of instruction, level of student, and field of study.

Whether RRPM is used by an institution for its own purposes or for purposes of exchange and comparison, its ultimate utility is as an aid in planning. While the planning model cannot answer judgmental or value-laden questions, its judicious use can clarify the nature of many thorny decisionmaking problems. RRPM can help planners and administrators ask more pointed questions and get more useful answers.

After having accomplished implementation of RRPM as a direct cost model, the institution may wish to develop a full-unit costing capability. This can be achieved by feeding indirect cost analysis into RRPM, which will then calculate full unit costs.

SUBJECT AREA(S)

The subject areas are postsecondary education planning and management.

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators are the intended users.

GOAL(S) OR PURPOSE(S)

The purpose of this product is to provide a computer simulation model designed to calculate the resources that would be required to operate an institution under varying enrollment levels and operating policies.

IMPLEMENTATION PROCEDURES

RRPM 1.6 programs were developed for multiple vendor computers. To permit the programs to operate in this flexible environment, only American National Standard (ANS) COBOL was used. The use of ANS COBOL, coupled with the incorporation of the COBOL segmentation feature, also facilitates the process of further reducing core requirements.

ASSURANCES AND CLAIMS

In the development of RRPM 1.6, many experimental prototypes were developed, and many concepts were tried and evaluated. Eight participating NCHEMS institutions served as official pilot-test sites for earlier prototypes, and staff from those pilot institutions contributed significantly to the art and science of resource requirements simulation modeling in higher education.

In December 1972, the NCHEMS Technical Council released the Resource Requirements Prediction Model, version 1.6, for general distribution to institutions throughout the country. RRPM 1.6 is intended to supersede all previous NCHEMS cost simulation models (the Cost Estimation Model and RRPM 1.3), since it provides both greater capability and greater user convenience than the earlier versions.

NCHEMS certifies that the RRPM 1.6 programs meet conventional ANS COBOL programing standards and will meet the performance characteristics indicated in the *RRPM 1.6 System Documentation*. If such is not the case, NCHEMS will make appropriate program modifications and distribute such changes to institutions that have earlier versions. NCHEMS will assume no responsibility for other modifications of RRPM 1.6 programs.

The system has certain limitations. The maximum number of organizational units (e.g., disciplines, departments, schools, or degree programs) allowed is 9,999. Although the possible number of organizational units is much greater than 9,999, the limit is due to internal subscripting within the system. The system is designed to accept a maximum of 7 student and course levels, 5 instruction types, 6 faculty ranks, 4 categories of other staff, 7 other departmental expense types, and 9,999 estimating equations relating to noninstructional categories. The system as distributed is limited to 200 disciplines, 100 departments, 50 schools, and 200 majors.

In 1973 NCHEMS undertook a comprehensive survey of American and foreign colleges and universities. The RRPM 1.6 was surveyed with the Cost Estimation Model, which is a predecessor computer-based cost simulation model. Sixty-nine of the three hundred eleven (22.2 percent) responding postgraduate degree institutions with 5,000 or more students indicated they had used at least 1 of these 2 models. Additional colleges and universities were in the process of implementing RRPM 1.6, several others expected to follow in the future.

Approximately 320 institutions have purchased the RRPM 1.6 software package.

COSTING AND DATA MANAGEMENT SYSTEM

A data management system which provides historical instruction cost studies

The National Center for Higher Education Management Systems (NCHEMS) *Costing and Data Management System* is designed to assist institutions in the implementation of cost studies. There are at least two kinds of cost studies—historical cost studies display cost-related data that reflect actual events over a specified prior time period, and predictive cost studies forecast costs that will be incurred during some future time period. These two kinds of cost studies use different techniques. Historical studies require the identification and aggregation of cost-related data in terms of actual units (e.g., dollars, credit hours). Predictive studies usually represent an institution in terms of historically derived parameters (such as average section size, faculty rank mix) which then are used as the basis for forecasting costs.

The system supports both historical and predictive cost studies—specifically, the cost study program of the *Information Exchange Procedures* (IEP) and the *Resource Requirements Prediction Model* (RRPM) 1.6.

The system is composed of the following modules:

1. Account crossover module (ACM)—A module that processes the accounting information of the institution. It allows information from the institutional accounts to be converted to a common activity structure.

2. Data management module (DMM)—A module that is a storage and manipulation mechanism for information obtained from the account crossover module, personnel data module, faculty activity module, student data module, and student outcomes module.

3. Faculty activity module (FAM)—A module that converts and aggregates the information obtained from the faculty activity and outcomes survey instrument and forwards the information to the personnel data module.

4. Personnel data module (PDM)—A module that processes personnel information to calculate crossover instructions used by the account crossover module, by linking personnel to the accounts from which they are paid and to the tasks which they perform.

5. Student data module (SDM)—A module that processes student registration information in order to determine program costs.

6. Student outcomes module (SOM)—A module that converts and aggregates the information from the "Student Outcomes Questionnaire for Program Completers" and forwards the information to the data management module.

SUBJECT AREA(S)

Postsecondary education planning and management are the subject areas.

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators are the intended users.

GOAL(S) OR PURPOSE(S)

The *Costing and Data Management System* is a software system designed to assist the institution in the implementation of historical and predictive cost studies.

IMPLEMENTATION PROCEDURES

The computer software developed for this system has been used on BURROUGHS, CDC, DEC, HONEYWELL, IBM, UNIVAC, and XEROX systems.

ASSURANCES AND CLAIMS

This software has been pilot tested in institutions around the country and has been purchased by approximately 210 institutions.

The product is a Type I program product. The following description of a Type I program product is contained in the National Center for Higher Education Management Systems (NCHEMS) policies and procedures manual:

"A computer program or system of programs and documentation released under this designation will contain a warranty that indicates the programs meet the programing standards of the center and will perform as the documentation indicates and that NCHEMS will make modifications if this is not the case.

"Recipients of Type I release programs will be maintained on a mailing list and will receive any changes to the software made by NCHEMS. Support will be limited to released versions of the software and does not include user modifications.

"NCHEMS support for software released under type I will include notifications, telephone, and letter correspondence concerning implementation. Users will be notified 12 months in advance of termination of NCHEMS support of any particular product. Onsite implementation assistance for individual institutions will not be provided, but periodic technical workshops will be made available as appropriate."

RD 170 012

DATA ELEMENT DICTIONARY (DED)

A second edition of a guide to assist institutions
and agencies concerned with higher education in
the identification, definition, and collection
of data required for implementation of the NCHEMS
systems

The second edition of the *Data Element Dictionary* (DED II) assists institutions and agencies of postsecondary education in the identification, definition, and compilation of the standard data elements they need for improved analysis, planning, and resource allocation. This publication serves to identify and describe: (1)Those data elements required to support current National Center for Higher Education Management Systems (NCHEMS) products, (2) certain data elements anticipated as being required for further NCHEMS products, (3) certain data elements commonly maintained by institutions for operational and reporting purposes, and (4) certain terms that are needed to help identify institutional characteristics for exchange purposes that are not generally included in an institutional data file.

The *Data Element Dictionary* is divided into five categories: Course, facilities, finance, staff, and student. The data categories and definitions suggested represent common usage except in identified instances. The dictionary does not contain a complete list of data elements that should be included in an institutional data system. Unique institutional requirements will mandate the inclusion of other elements. Since the primary intent of this document is the identification of data elements, many of the data elements specify institutionally defined categories. Appendixes include HEGIS taxonomy, current funds revenue categories, abbreviations, standard format for calendar date, standard room use categories, visa types, and functional classification categories.

SUBJECT AREA(S)

Postsecondary education planning and management

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators

GOAL(S) OR PURPOSE(S)

To identify and to act as a repository for the data elements which will be incorporated in the data bases of the institutions for purposes of planning, management, and information exchange

IMPLEMENTATION PROCEDURES

Although these sections are the final version of the second edition of the dictionary, NCHEMS fully intends to continue to update them in subsequent editions. In fact, this document will be updated regularly during the coming months to reflect the data element definitions that will have been pilot tested in several related NCHEMS projects. Revised pages and sections will be sent to each individual to whom this document has been sent.

ASSURANCES AND CLAIMS

This edition of the *Data Element Dictionary* (DED II) has been developed by the staff of the National Center for Higher Education Management Systems (NCHEMS) in conjunction with members of the DED task force. The five sections composing the dictionary have been reviewed by NCHEMS staff members, the DED task force, the NCHEMS Technical Council, and representatives from all participating institutions to whom the documents were sent for review in early 1973.

The data categories and definitions suggested represent common usage except in those identified instances for which accepted national standards exist, e.g., U.S. postal code abbreviations for States of the United States and ZIP codes. In those few cases where more than one set of categories and definitions are commonly used, alternatives have been provided. The dictionary does not contain the complete list of data elements that should be included in an institutional data system. Unique institutional requirements will mandate the inclusion of other elements. Since the primary intent of this document is the identification of data elements, many of the data elements specify institutionally defined categories. The elements contained in the dictionary are to be regarded as current recommendations by NCHEMS and not as standards for any mandated reporting purposes.

In January 1972, the Business Research Division of the Graduate School of Business Administration at the University of Colorado undertook a study of the impact of the National Center for Higher Education Management Systems at the Western Interstate Commission for Higher Education (WICHE) to produce factual information for purposes of program evaluation and review. The information that follows is taken from the analysis by Dr. Charles P. Rahe.

"The *Data Element Dictionary* (DED) has the greatest overall recognition level. All of the systems and coordinating bodies are familiar with it, as are nearly 85.0 percent of the institutions. In general, a high percentage of those not now using . . . the DED plan to do so."

In late 1973, NCHEMS undertook a comprehensive survey of presidents of all institutions listed in the *National Center for Educational Statistics Higher Education Directory* and to all institutional personnel on the NCHEMS mailing list. These 2 groups included approximately 6,300 persons. Responses were received from 1,642 individuals at 1,295 American and 16 foreign institutions. The results of that survey indicate: Of all NCHEMS work to date, the dictionary, the first Center product to become available, has probably received wider use than any other product; of all institutions responding to the questionnaire, 484 (36.9 percent) indicated they have used the *Data Element Dictionary;* and among postgraduate degree institutions with 5,000 or more students, 222, or 71.4 percent, indicated use of the dictionary.

NCHEMS GLOSSARY

A collection of basic terminology used in NCHEMS products

The *NCHEMS Glossary* represents a collection of basic terminology used in National Center for Higher Education Management Systems (NCHEMS) products. It has been compiled primarily to assist staff as a vehicle for assuring uniformity in use of terminology in all NCHEMS publications and products. Although definitions in this glossary are not identical to usage in all past projects, they represent the common usage in current projects. In cases where differences in definition exist among projects, these differences have been noted.

SUBJECT AREA(S)

Postsecondary education planning and management are the subject areas.

INTENDED USERS AND BENEFICIARIES

The primary intended users of this product are the National Center for Higher Education Management Systems (NCHEMS) staff. However, it will also benefit anyone seeking definitions of NCHEMS terminology in postsecondary education.

GOAL(S) OR PURPOSE(S)

This product serves to assure consistency of definition and uniformity in use of terminology by NCHEMS staff as well as users of NCHEMS products and publications.

ASSURANCES AND CLAIMS

To insure consistency in future NCHEMS products, these glossary definitions should be considered as standard NCHEMS definitions. Any revisions or new definitions will be centrally monitored at NCHEMS to keep the terminology consistent. This glossary will be updated regularly.

POSTSECONDARY EDUCATION ACADEMIC UNIT PLANNING MANUAL (AUPM)

A technique to identify and organize information about academic unit functions and human and physical resources

The *Academic Unit Planning Manual* (AUPM) will assist in planning and managing the scope and direction of an academic unit within a postsecondary education institution. The manual will help in the identification and organization of data about academic unit functions, the availability and allocation of human and physical resources, the sources and uses of funds, and the planning and assessment of outcomes. Included are several analytic techniques that facilitate the examination of alternatives regarding the allocation of resources; for example, the analysis of various faculty/activity assignments, determination of expected student enrollments, and the uses of financial resources.

The planning manual can be used to address such questions as: How much and which kinds of resources will be consumed by the community service activities conducted by the Home Economics Department? What is the expected student demand if a new course in accounting is established? How many students can be expected to take Educ. 550 during fall 1975, and from which departments may they come? What are the planned outcomes of the department? How many faculty are needed to staff adequately the projected teaching, research, public-service, and administrative functions of the unit?

The manual has been designed to be flexible in its use and to rely upon the administrator's experience and judgments in applying the tools to examine various planning situations. It is organized into several "modules," each of which addresses a particular aspect of the overall planning and management process within academic units. Each module consists of worksheets for identifying, organizing, and analyzing data and procedures for helping to investigate a variety of planning and management concerns. The tools and procedures can be and should be modified by academic unit administrators to fit their particular situation.

While implementation of this manual can occur at various levels within an institution, it is designed to focus on the academic department. The academic department is typically an organized unit within a school or college dealing with a specific field of knowledge. For example, the English department typically would be an organized unit within the college of arts and sciences; accounting would be a department within the school of business; and the department of ecology might be an organized unit within the college of engineering. However, it should be mentioned that, in some cases, a school or college might be equivalent to a department, and a division might be analogous to a department. Throughout the manual, "academic unit" is used as a generic term to denote the user's basic organizational unit.

SUBJECT AREA(S)

Postsecondary education planning and management are the subject areas.

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators are the intended users.

GOAL(S) OR PURPOSE(S)

The purposes are to improve planning and management within institutions through the development of tools and procedures that will facilitate: (1) The gathering and analyses of information about the resources, activities, and outcomes of academic units; and (2) the examination of alternative allocations of resources within various organizational levels within the institution.

The project intends to provide academic unit administrators with appropriate techniques and information for managing their units.

ASSURANCES AND CLAIMS

At the current stage of development, the manual has been carefully reviewed by:

1. The National Center for Higher Education Management Systems (NCHEMS) staff
2. Several individuals from various postsecondary education institutions throughout the country
3. Paul Dressell, of Michigan State University, and Stephen Hoenack, of the University of Minnesota, as independent technical consultants
4. Administrators from Ball State University and the

University of Minnesota who participated in the field development of the document during July-November 1974.

The document will undergo a pilot test in spring and summer 1975 in a small number of postsecondary education institutions and a mail review by the NCHEMS constituency. The results of the field review and pilot test will be considered and incorporated as appropriate in the manual before it is published in late fall 1975.

It is most important to note that this planning manual does not prescribe standards for academic unit planning, nor does use of the manual imply that information about academic units should be exchanged. Any academic unit that intends to implement this manual for information exchange purposes must establish its own conventions and procedures.

FACULTY ACTIVITY ANALYSIS MANUALS (FAA)

Techniques for collecting data to serve as a foundation for analyzing faculty activities and allocating salaries to instructional programs

The purposes of the *Faculty Activity Analysis (FAA) Manuals* are to provide (1) techniques for collecting data which will serve as a foundation for allocating faculty salaries to instutional programs and (2) standard procedures for analyzing faculty activities.

The manual presents the faculty activity survey instrument and discusses the procedural questions involved in conducting an activity survey. Recommended procedures are given where appropriate. Some of the concerns confronting an institution that is initiating an activity survey are identified and discussed, such as: when the survey should be conducted, whether the institution should sample faculty or conduct a census, what should be the survey time period, what are the alternative methods of administering the survey, and what is the effect of each of these in the resulting data.

Some of the larger issues surrounding a faculty activity analysis are discussed. These include (1) the question of the accuracy and consistency of faculty activity information, (2) the effect altering the survey instrument has upon the resulting data, and (3) the general question of faculty acceptance of an activity survey.

Faculty Activity Analysis Interpretation and Uses of Data suggests and illustrates a variety of faculty activity information display formats and analysis techniques. This document outlines a series of display formats that may be useful for describing the faculty resources at an institution, illustrates by use of a case study the utilization of the faculty activity analysis instrument and instructions, and shows how the resultant data can be analyzed to address important planning and management issues. Finally, the document describes in a general sense the specifications of a software package which the National Center for Higher Education Management Systems (NCHEMS) has developed to process part of the faculty activity data and which is available as part of the *Costing and Data Management System.*

SUBJECT AREA(S)

Postsecondary education planning and management.

INTENDED USERS AND BENEFICIARIES

Postsecondary education administrators.

GOAL(S) OR PURPOSE(S)

(1) To serve as a standard methodology for the categorization of faculty effort and the distribution of faculty effort to the programs in an institution of higher education and (2) to provide a description of how the activity data may be used to support costing, budgeting, and long-range planning and an outline of the software to help the user analyze faculty activity data.

IMPLEMENTATION PROCEDURES

While not necessary, some institutions may find computer access to be desirable.

ASSURANCES AND CLAIMS

This product was developed by the FAA task force and the FAA pilot-test institutions in conjunction with the NCHEMS staff. Several consultants were also involved in the project prior to the formation of the task force.

The procedures manual is intended to aid institutions in conducting a faculty activity analysis which can be used for internal management purposes. This manual does not present specific costing procedures; rather, it displays a management tool that could be used to support a wide variety of different procedures.

The manual makes recommendations about the design of a survey instrument and the procedures for conducting a faculty activity survey. These recommendations should not be considered as standards; they are guidelines for institutions and should be adapted to the particular needs of an institution. The users are also cautioned that using the recommended procedure does not insure comparability of the resulting data among institutions.

The interpretation and uses manual is intended as a guide for analyzing faculty activity data and is aimed primarily at a technical audience responsible for processing and analyzing such data. The contents of the document should be regarded as illustrative only; they are not to be treated as standards, even though they may be included in other NCHEMS documents in which standards and conventional treatments are presented. In this manual, however, prototypes rather than standards are presented. The reader is cautioned that the contents of this manual deal only with the results of faculty activity data, which may be useful in many contexts. Nonetheless, institutional policy, practice, or experience may dictate that such data are not useful for the specific purposes that are suggested here, so that other sources of similar data may be more appropriate.

STUDENT FLOW MODEL SFM-IA

A tool for analyzing and predicting student flow between fields of study

The *Student Flow Model SFM-IA* is a tool for analyzing the historical movement of students between the various fields of study and student levels in an institution and for estimating the future enrollments in each student program (or field of study) and student level combination in that institution. Modular in concept, the system can be implemented in phases to permit an institution to begin using its results immediately and to incorporate additional levels of analysis as needed and as the required input data become available.

This product can be used alone in an independent analysis of student progression through the institution. Schools also using the *Resource Requirements Prediction Model 1.6* (RRPM 1.6) will find SFM-IA useful in projecting future student enrollments for RRPM cost-projection purposes. In the past several years, many institutions have developed ways to use analytical tools in their planning and management functions.

One of the most important estimates that must be made for projection purposes is the number of students who will be enrolled in each program/student level combination in the future. The SFM-IA is designed to assist in making these projections.

SUBJECT AREA(S)

The subject areas are postsecondary education planning and management.

INTENDED USERS AND BENEFICIARIES

The intended users are postsecondary education administrators.

GOAL(S) OR PURPOSE(S)

The purpose is to develop a computer-based simulation model that utilizes the institution's historical experience of student flow to estimate future enrollment patterns categorized by student levels and major.

IMPLEMENTATION PROCEDURES

The system consists of 17 programs and a number of sort routines. The programs are written in a low-level ANS COBOL. Programs are also written entirely in sections to facilitate the process of reducing core requirements and to assist in distinguishing the various logical functions performed by the system. As distributed by the National Center for Higher Education Management Systems, the SFM-IA will run in a 50K partition in an IBM OS or DOS environment.

ASSURANCES AND CLAIMS

The product has been developed with the advice of the Student Flow Model Task Force and has been pilot tested at five institutions. This software has also been distributed to 26 schools that were not part of the pilot test. In addition to the task force members and formal pilot-test institutions, several individuals and institutions have provided valuable feedback during the development of the system.

ACCOUNTABILITY IN HIGHER EDUCATION, REPORT NO. 1

A summary of trends in accountability and a bibliography of the accountability literature of the 1970's

This paper is an overview of accountability in higher education and considers it in three major contexts: Managerial accountability, accountability versus evaluation, and accountability versus responsibility. The increasing pressures to be more accountable to external focuses such as executive agencies and the public are examined, as well as the question of accountability within institutions themselves. Three major difficulties in assessing internal accountability are discussed: (1) The weaknesses of academic authority result in increased pressures to codify the faculty-administrative relationship, (2) lack of clearly defined goals and objectives are frequently matched with proposals to hold institutions more accountable through certain management techniques and by increased emphasis on student learning, and (3) organizational complexity of colleges and universities often results in proposals for centralized decisionmaking structures that are not sufficiently aware of legitimate demands for accountability. Also considered are some possible trends in accountability for the 1970's. An extensive bibliography is included.

SUBJECT AREA(S)

An overview of accountability, definitions of the various terms used in discussing accountability, difficulties in assessing internal accountability, possible trends in accountability, and an extensive bibliography comprise this 60-page report.

INTENDED USERS AND BENEFICIARIES

Potential users of this monograph include institutional policymakers and decisionmakers, State and Federal agencies, and all others concerned with accountability.

GOAL(S) OR PURPOSE(S)

This monograph serves as a summary of the literature on accountability for policymakers and decisionmakers at all levels. It also serves as a source of up-to-date information on the arguments, positions, and most desired practices on the topic of accountability.

A second use for this monograph will be as a supplementary text for students in higher education.

PATTERNS OF USE

This review is read by those who will make decisions and form policy about higher education; it will be used as a guide and also as a jumping-off point to expand into further programs or research on accountability. As an indication of this report's topicality, 1,702 copies of this report have been sold.

COMMUNITY COLLEGES RESPOND TO ELDERS: A SOURCEBOOK FOR PROGRAM DEVELOPMENT

A guide to developing and implementing educational programs for the elderly

This sourcebook is a program planning guide aimed at community college administrators and other interested educators to assist them in developing and implementing educational programs for elders. The sourcebook provides an examination of the changes in the nature of the older adult population and the impact of these changes on the educational needs of elders. The capability and potential of education, in general, and community colleges, in particular, to meet these changing needs are analyzed.

The core of the sourcebook is the presentation of a model of educational program development for elders providing specific guidelines on needs assessment, outreach and recruitment, selection of program content, maximization of resources, and funding. The model identifies and describes an inclusive process of program development which involves elders in active roles as initiators, planners, organizers, and instructors, rather than as students only. This model is based on the project's finding that elders' involvement in the process of program development is a crucial factor and is as important as the resulting program content. Sample core curriculums for elders in the areas of enrichment, retirement planning, advocacy, and retraining for second careers are provided with the model. Also, case studies of colleges using similar inclusive processes of program development are included with a general state-of-the-art report on current community college programs for elders.

SUBJECT AREA(S)

The sourcebook contains five chapters as follows:

I. Introduction. Background on the changing characteristics of older adult populations.

II. Aging and education. An examination of the educational needs of elders and the potential of education, in general, and community colleges, in particular, to work with elders to develop new options for the retirement period.

III. Current programs. A "state-of-the-art" report on current community college programs for elders and two indepth case studies of program development.

IV. An inclusive model of educational program development for elders. Taking the initiative; forming an alliance; assessing needs; selecting program content; insuring program effectiveness; and maximizing manpower, finances, and other resources.

V. A glimpse of the future. Implications for program development.

Appendixes. Additional case studies, listing of resources, annotated bibliography, and colleges surveyed for project.

INTENDED USERS AND BENEFICIARIES

The sourcebook is aimed specifically at community college administrators and, more generally, administrators and educators in other educational institutions who are interested in developing programs for elders. Other potential users would be instructors of older adults, professionals working with elders, and elders themselves. Both elders and education will be ultimate beneficiaries of the increased involvement and participation of this segment of the population.

GOAL(S) OR PURPOSE(S)

This sourcebook is intended to serve as a working tool and practical guide to administrators and educators in planning and implementing educational programs for elders.

PATTERNS OF USE

The sourcebook can be used by college administrators who currently have no programs for elders and who are interested in finding out how to begin to develop such programs and what options and programs are possible and feasible. The sourcebook can also assist administrators who currently have programs for elders and who are interested in expanding into other areas of program content or who are concerned with making more effective use of existing resources or obtaining further resources.

COMPETENCY-BASED EDUCATIONAL PROGRAMS IN HIGHER EDUCATION

Summary of status of developments in competency-based programs

This paper will assess the status of developments concerning competency-based programs in higher education. Some evaluations of the number and types of programs will be included. Information concerning success of programs, acceptance by faculty and students, and potential for continued development will be summarized.

SUBJECT AREA(S)

This review will cover developments in competency-based programs in higher education, including evaluations, success of programs, acceptance of programs, and their continued potential for development.

INTENDED USERS AND BENEFICIARIES

The intended audience of this report includes faculty members and academic administrators in all disciplines. Researchers and planners considering the implementation of a competency-based program will also find it useful.

GOAL(S) OR PURPOSE(S)

The goal of this review is to present a concise report of the developments in competency-based education, to evaluate competency-based education, and to outline its future.

COMPUTERIZED DATA SOURCES FOR HIGHER EDUCATION

A summary of available data sources, definitions, and methods of access

Today, with the development of computerized data banks, there is an increased quantity of stored information relevant to problems far beyond the scope of the original study for which the data were developed. The format of this paper is to indicate specific data sources, to describe the contents of these data, and to identify a contact that may be used to find out more about the use of these data. The sources are divided into the following areas: General survey data, financing data, and nonstatistical data. A 20-item bibliography is included.

SUBJECT AREA(S)

This 4-page pamphlet indicates data sources, describes the contents of the data, and identifies a contact that may be used to find out more about the use of these data.

INTENDED USERS AND BENEFICIARIES

Practitioners and researchers in higher education who are interested in the availability of major data bases will profit from this pamphlet.

GOAL(S) OR PURPOSE(S)

The purposes of this paper are to indicate data bases and to describe data content.

A CONCEPTUAL REVIEW OF EXPERIMENTIAL LEARNING IN HIGHER EDUCATION

A critical review of the conceptual literature on experimential learning

This paper will develop a conceptual statement on the relationship of experiential learning to academic programs of higher education. It will provide a critical review of the conceptual literature available on experiential learning (including internships, field work, and service-learning), and develop a broadly defined conceptual statement on experiential learning. The focus of the paper will be on undergraduate education. Various types of programs will be identified and classified according to the scheme developed. The current status and potential direction of each of these programs will be assessed. Finally, implications for experiential learning in the future of higher education will be outlined.

SUBJECT AREA(S)

This monograph will cover experiential learning and its many facets (internships, field work, and service-learning). Various types of programs will be identified and the current status and direction of each will be assessed. Implications of experiential learning for the future will be outlined.

INTENDED USERS AND BENEFICIARIES

Policymakers, researchers, teachers, and students interested in experiential learning will benefit by reading this monograph.

GOAL(S) OR PURPOSE(S)

The goals of this monograph are: (1) To present a review of the present experiential learning programs, (2) to analyze these programs, (3) and to discuss implications for the future.

CONCERNS OF HISTORICALLY AND DEVELOPING BLACK INSTITUTIONS: A BIBLIOGRAPHY

A bibliography of ERIC materials on various aspects of black institutions

This annotated bibliography covers documents and journal articles dating from 1969 that have been announced in the ERIC system. The reports are organized into 11 categories: (1) "General Discussions on Black Colleges and Students," (2) "Federal Support to Black Colleges," (3) "Admissions, Recruitment, and Student Financial Aid," (4) "Administrative Planning and Management," (5) "Curriculum Development, Planning, and Innovative Instruction," (6) "Faculty Issues," (7) "Interinstitutional Cooperative Programs," (8) "Institutional Research," (9) "College-Community Relationships," (10) "Student Services: Counseling, Guidance, and Placement," and (11) "Libraries." For each document, the author gives the ERIC classification number, author, title, publication date, number of pages, and an abstract. Journal articles are selectively annotated.

SUBJECT AREA(S)

Various aspects of black institutions including Federal support, admissions and recruitment, planning and management, and curriculum

INTENDED USERS AND BENEFICIARIES

The product was developed with the membership of the Consortium of Southern Teacher Educators in mind and is also intended for nonmember institutional personnel in historically black institutions.

GOAL(S) OR PURPOSE(S)

This bibliography references ERIC materials in order to stimulate utilization of the literature for experimentation and program improvement.

FACULTY WORKLOAD: FACTS, MYTHS, AND COMMENTARY

A description of the state of the art of faculty workload measures

This monograph examines methods by which faculty workload studies can be performed. It includes definitions and discussions of activities used in workload assessment, such as instructional time, institutional and public service, personal activities, and research, scholarship, and creative endeavors. The author concludes that there is a paucity of empirical data about faculty workloads and too much acceptance of commonplace assumptions that do not stand up to critical examinations. The author believes that faculty workload formulas will vary among institutions and that individual institutions should develop their own faculty workload questionnaires.

SUBJECT AREA(S)

This 69-page monograph covers the concept of faculty workload, the measurement of faculty workload, workload categories, methodologies and procedural problems, factors that may influence teaching load, computing total faculty workload, and distribution of faculty worktime.

INTENDED USERS AND BENEFICIARIES

This paper is directed to all persons who are concerned with productivity, accountability, and collective bargaining.

GOAL(S) OR PURPOSE(S)

In addition to synthesizing the relevant literature on faculty workloads, the intent of this report is to increase the readers' awareness of the alternatives in measuring faculty productivity.

HIGHER EDUCATION AND THE STEADY STATE

An examination of the response of postsecondary educational institutions to declining enrollments

This paper examines the no-growth phenomenon in higher education. A framework is presented for viewing what is occurring in higher education as it seeks to resume a dynamic state of growth. Borrowing from Schumpter's five categories of innovations by which business firms seek to gain a competitive edge over their rivals, an analytical framework is developed, and the current activities of higher education institutions and agencies vis-a-vis no-growth activities are examined. The authors conclude that higher education is attempting new products, new methods of production, new markets, and new productive factors, and is reorganizing and restructuring the enterprise.

SUBJECT AREA(S)

This 65-page monograph defines "no growth" in higher education, discusses enrollment in relation to no-growth as well as American higher education in a period of readjustment to no-growth. It includes a discussion of opening new student markets and new products; employing new sources of supply or production factors; and developing, reorganizing, and restructuring higher education.

INTENDED USERS AND BENEFICIARIES

Everyone who is concerned with the development of higher education in the forthcoming years should find this paper of interest. In particular, those institutions that are already in a declining or no-growth situation will find this paper of special interest.

GOAL(S) OR PURPOSE(S)

The general conceptual framework developed in this monograph should aid those institutions now experiencing the no-growth phenomenon to plan effectively for their future.

INFORMATION CENTERS IN HIGHER EDUCATION

An overview of resource centers which exchange noncomputerized data concerning postsecondary education

Across the country there exist invaluable resources to all those who are involved with administering, or planning for, institutions of higher education. These resources include the variety of clearinghouses and information centers that have been established to collect and disseminate the most recent data concerning specific higher education problem areas. These centers can help an institution maximize its resources and its staff productivity by keeping the institution informed about the current developments and experiences of other institutions. The paper highlights some of the various resource centers that are involved in the exchange of noncomputerized data concerning higher education. These centers are involved in the collection and dissemination of papers, exchange of ideas, and identification of knowledgeable people who can aid institutions in finding solutions to some of their problems.

SUBJECT AREA(S)

This paper will highlight some of the various resource centers that are involved in the exchange of noncomputerized data concerned with higher education.

INTENDED USERS AND BENEFICIARIES

All administrators and researchers who are involved with administering or planning for institutions of higher education are the intended users.

GOAL(S) OR PURPOSE(S)

The purpose of this paper is to identify the various resource centers that are involved in the exchange of noncomputerized data concerned with higher education.

LIFETIME LEARNING: EXTENDING AVAILABILITY OF EDUCATION BEYOND COLLEGE AGE

Recent developments, prospects, and potential problems of extending higher education beyond the traditional student age group level

One of the major current themes in higher education is the extension of opportunities beyond "college age." Lifetime learning is consistent with the goal of widening access and also is relevant to the problems of declining enrollment. This review considers recent developments and prospects, as well as potential problem areas in the future. It will be broad in scope and will examine a variety of issues, including shifts in the types of programs offered, concerns for academic standards, and financing.

SUBJECT AREA(S)

This review will consider recent developments in lifetime learning, as well as future problem areas in this field. It will examine a variety of issues, including shifts in types of programs offered, concerns for academic standards, and financing.

INTENDED USERS AND BENEFICIARIES

Policymakers concerned with lifetime learning, researchers, teachers, and students of higher education will find this review of interest.

GOAL(S) OR PURPOSE(S)

The goal of this review will be to present a concise review of the recent developments in lifetime learning and consider some problems for lifetime learning programs in the future.

THE PERSONALIZED SYSTEM OF INSTRUCTION: AN EDUCATIONAL ALTERNATIVE

A detailed monograph tracing the history of the personalized system of instruction

Over the past decade, momentum has been gathering for the development and application of a variety of approaches to the instructional process that emphasize mastery and self-pacing by the student. Included in this report are approaches to this problem, such as programed instruction, computer-aided instruction, and individually prescribed instruction. This review considers one such approach that is being used more and more widely in higher education, the Personalized System of Instruction (PSI). The paper describes the brief history of PSI and its basic conceptual ingredients and provides an indepth look at a typical PSI classroom. It also reviews research that compares PSI to more traditional forms of instruction, identifies information programs and knowledgeable individuals, and speculates on the future of PSI.

SUBJECT AREA(S)

This 50-page monograph describes the history of the Personalized System of Instruction (PSI), its basic conceptual ingredients, and a PSI classroom. Review research comparing PSI to traditional instruction is presented, along with information programs and speculation on the future of PSI.

INTENDED USERS AND BENEFICIARIES

This monograph is for faculty and students who are not currently involved with or knowledgeable about individualized instruction, as well as administrators who are concerned about the economies of individualized instruction.

GOAL(S) OR PURPOSE(S)

The purpose of the monograph is to encourage wider use of this approach to instruction and to contribute to information exchange about PSI among current researchers in this area.

STATE AID TO PRIVATE HIGHER EDUCATION, REPORT NO. 3

A summary of proposed legislation for State support of independent postsecondary institutions

Recent public interest in the unique financial problems of private higher education has resulted in proposals and legislation for State support of independent institutions. Although public assistance alleviates the private colleges' financial problems, it also obligates them to increase State supervision of their activities. Several State boards and independent associations believe the private sector's problems warrant special concern and action. Reflecting this view, the reports and position papers listed in this bibliography generally agree on the necessity for State funding of private higher education. They affirm the importance of maintaining an independent sector and of a State's special responsibility for all higher education institutions within its borders. These convictions are supported by proposals for both student and institutional assistance. Beyond funding, there remains the question of the long-range impact these proposals will have, if implemented, on the distinctive qualities of the private institution.

SUBJECT AREA(S)

The State's interest in private higher education, methods of aid, and problems created by the State-private college relationship are examined and analyzed in this 43-page report. An annotated bibliography is included.

INTENDED USERS AND BENEFICIARIES

This report was designed to be used by administrators in the field of financing in higher education.

GOAL(S) OR PURPOSE(S)

This monograph is designed as a summary of the literature on the private college and the State to help policymakers and decisionmakers at all levels gain perspective on the issues. It is a literature review for researchers and a textbook for students of higher education.

PATTERNS OF USE

The annotated bibliography provides users with valuable data on financing private higher education. The material will be useful in preparing new institutional assistance provisions and legislation.

ASSURANCES AND CLAIMS

A note was received from the Department of Health, Education, and Welfare stating that this monograph will be used as a foundation to develop new institutional assistance provisions in the higher education bills.

STRATEGIES FOR IMPROVING COLLEGE TEACHING, REPORT NO. 8

Techniques to improve and reform college instruction

This report considers a variety of ways to improve or reform college instruction. The methods discussed vary from those that would attempt to change what the teacher does to those that would change primarily what the student does. The particular way chosen to improve instruction depends upon the underlying philosophy of education. At one extreme, there are those who believe that the teacher's role is to help pass on a body of knowledge to students. While students are expected to put forth effort, much responsibility for what students learn rests generally with the teacher. Improving teaching often means finding ways to improve such things as the organization of the course and the teacher's classroom performance. At the other extreme, there are those who believe that the responsibility for learning rests with the student and that the teacher functions as a manager or facilitator of learning who directs and motivates students when necessary. Improvement of this latter instance means helping the teacher to both develop and implement whatever techniques will cause students to learn more. In sum, the strategies for improving college teaching presented in this report, like the various roles for the teacher, cover a wide spectrum.

SUBJECT AREA(S)

This 56-page report consists of an overview and a teaching and learning model; discusses research implications for teaching and learning; and considers self-analysis and teaching improvement, the impact of student ratings on teaching improvement, the institutional programs for teaching improvement, and technological impact of teaching improvement. The report also includes an extensive bibliography.

INTENDED USERS AND BENEFICIARIES

The report was meant to be used by practitioners in the field of teaching, researchers, and all those who evaluate teachers and teaching; e.g., department chairpersons, deans, and administrators.

GOAL(S) OR PURPOSE(S)

This report was designed to present the groundwork on the issue of improving instruction. As such, it may be used as a basis for implementing teacher improvement programs.

PATTERNS OF USE

The report is to be read by administrators, teachers, teacher evaluators, and students in higher education as an aid in implementing instructional improvement programs, either formal or informal.

TIME SHORTENED DEGREES

Historical background, benefits, and criticisms of degrees obtained over a shorter than usual period of time

This monograph examines the many aspects of time-shortened degree programs, using both a critical and analytical framework. It is shown that the 3-year baccalaureate programs are not a recent idea and that the use of the idea depends largely on a willingness not to view the 4-year degree as something sacrosanct. While there are some dangers inherent in time-shortened degrees, which are presented, the author believes that the issue of time-shortened degrees is only one part of the larger concern about the direction contemporary education should take and that new ideas about accommodating the perceived needs of secondary school students and the adult learner will have an impact in this area.

SUBJECT AREA(S)

This 82-page monograph provides a historical background, the benefits and the criticism of time-shortened degrees, including approaches to time shortening and an analysis of the approaches.

INTENDED USERS AND BENEFICIARIES

Those institutions and individuals who are concerned about reaching students and who wish to make their curriculums more accessible would find this monograph of interest.

GOAL(S) OR PURPOSE(S)

The purposes of this monograph are to develop new programs which can benefit from the experiences of the older programs and to serve as a base for further research in this innovative field.
